Air Products to Improve Productivity and Optimize Energy Use

NEX FLOW™

AIR PRODUCTS CORP.

TO ALL OF OUR CUSTOMERS AND SALES AGENTS AROUND THE WORLD Thank you for your continued support in our mission to improve plant productivity, reduce overall costs in production in the areas of energy and maintenance and to enhance the environment.

We promise to continue our research and development to improve our existing products, add new products and to educate the market place in this still growing technology. As the “new” leaders in specialized compressed air technology we recognize the key to maintaining this leadership is to actually lead with the best products and the best education with integrity so the customer can make knowledgeable choices.

Nex Flow™ offers:

- 1. Great Support :** To assist you in the use of the technology, demonstration units if required for test on valid applications.
- 2. Special Products :** Custom designs, special materials as you may need for your specific environment. If you have an idea, we will work with you.
- 3. Fast Delivery :** Stock items for quick delivery on most items.
- 4. Guarantee :** Nex Flow™ warrants its products against defects in material and workmanship for five years from the date of purchase of main pneumatic items (amplification products, venturi products, vortex tube products), two years for static control power supplies, one year on other electrical items and one year on accessories such as filters and regulators.

We look forward to serving your needs and to assure you are satisfied with the service from Nex Flow™ and their partners and associates around the world.

INDEX

Smart N Clever™ Air Products to improve productivity and optimize energy use

Engineered Compressed Air Technology for blowoff, cooling, cleaning, conveying, static control and specialty industrial and housekeeping applications.

Section A	SMART N CLEVER™ OPTIMIZATION PRODUCTS To minimize the use of compressed air and monitor leaks, noise and flow		Section B	AIR BLADE™ AIR KNIVES For blowoff, cleaning and cooling with reduced air and noise levels	
Section C	RING BLADE™ AIR WIPE SYSTEM For blowoff and cooling of cable, hose, pipe and all types of extruded shapes		Section D	AIR AMPLIFIERS For blowoff, cooling, drying and venting with reduced air and noise levels	
Section E	AIR NOZZLES AND JETS For reducing energy costs and noise in blowoff applications		Section F	SMART N CLEVER™ AIR GUNS With high performance Air Nozzles for energy saving	
Section G	STATIC ELIMINATORS To remove static charge and for dirt control on plastics and other charged surfaces		Section H	RING VAC™ AIR OPERATED CONVEYOR SYSTEMS To convey solid materials, parts, etc. with no moving parts	
Section I	SPECIALTY SMART N CLEVER™ PRODUCTS For housekeeping, liquid transfer, cleaning, conveying and cooling		Section J	FRIGID-X™ VORTEX TUBES AND SPOT COOLING Cold air devices with no moving parts for spot cooling	
Section K	FRIGID-X™ TOOL COOLERS For dry machining operations to improve quality and speed		Section L	FRIGID-X™ PANEL COOLERS Maintenance free electrical and electronic enclosure cooling, ULC approved, CE Compliant	
Section M	ACCESSORIES Mufflers, Filters, Mounting Systems and Specialty Products		Addendum	ADDENDUM I Air Amplification Explained and How it is Measured ADDENDUM II Vortex Tube Explained & Performance Measurement

Terms and Conditions

for the USA and Canada (may vary in other countries)

TERMS :

Net 30 days subject to credit approval. Visa, MasterCard and American Express accepted. All taxes extra as applicable (not included).

FOB :

Nex Flow™ Air Products Corp. factory warehouse, Mississauga (Toronto area), Ontario, Canada. For UPS shipments freight is normally prepaid and added to the invoice or customer account utilized.

DELIVERY :

Most cataloged items shipped from stock within 24 hours from receipt of order. Priority shipments can be arranged on request.

ORDERING :

In the USA and CANADA call toll free +1-877-797-2777 and dial extension 1. Outside of the USA and CANADA call your local agent, or call +1-416-410-1313 and dial extension 1. Operating hours are 9:00 am to 5:00 pm Eastern Time Monday to Friday except holidays

To Fax, within the USA and CANADA Fax toll free +1-877-797-2777. Outside USA and CANADA Fax +1-416-410-1806

PAYMENTS TO :

Nex Flow™ Air products Corp., 10520 Yonge Street, Unit 35B-220, Richmond Hill, ON, Canada, L4C 3C7 **OR**

Nex Flow™ Air Products Corp., 300 International Drive, suite 100, Williamsville, NY, USA, 14043

TECHNICAL SUPPORT :

In the USA and CANADA call toll free +1-877-797-2777 and dial extension 6. Outside of the USA and CANADA call your local agent, or call +1-416-410-1313 and dial extension 6. Or you may Email: technical@nexflow.com, technical@nexflowair.com, technical@nex-flow.com

WARRANTY :

The Nex Flow™ 5 year warranty applies against defects in workmanship and materials on all compressed air blowoff, conveying and cooling products, 2 years on static control power supplies and 1 year on all other electrical items and accessories.

TRIAL GUARANTEE :

Nex Flow™ offers trials on approved applications for up to 30 days and longer if necessary. We do not just send product to try with minimal support like some companies wasting your time on improper applications. We will actually assist you on your application and if a test is necessary we will send product on loan to test, returnable at no cost within 30 days or approved trial period (pay only the freight). We recognize your need for competent technical support and will advise you honestly on your application.

COMPLIANCE :

Nex Flow™ compressed air blowoff, conveying and cooling products all comply with OSHA's Safety Requirements and those of the European Union and equivalent directives around the world. Electrical equipment complies with ROHS (Restriction of Hazardous Substances).

PLC FLOW CONTROL SYSTEM (PLCFC)

Minimizes compressed air use for blowoff, cooling, cleaning, conveying, drying and static control applications to dramatically save on compressed air use.

WHAT IS IT - REASONS TO USE

The Nex Flow™ user-friendly PLC flow control system (PLCFC) for compressed air is truly advanced and uses the most modern technology available today and can be used as a stand alone unit or interfaced with other automated systems. The PLCFC is a PLC based system - not just a simple, sensor and timer. The PLCFC combines a photo electric sensor to turn on the air when the target passes the sensor and to turn off the air when it leaves the sensor. (The unit is set to have a 2 second delay after it leaves the sensor but turns on instantaneously when it sees the target). We can supply an optional timer if the customer wants to set the unit to turn off based on time rather than using the sensor to turn it off.

Some competitive units only offer a simple on-off with timer that does not really optimize the air use if the timer is set wrong and leaves the system running far longer than necessary. We can control not only solenoid valves for on-off but can control any electrical devices such as motors, fans, conveyor motors that carry the parts, etc. Also, our systems which come complete with one sensor, can operate with up to eight sensors (not just optical, but proximity switches and other kinds of sensing devices) for a multiple of independent tasks. Each task can be programmed. Nex Flow™ can offer the service of special programming according to customer needs.

In addition, you have a choice of any one of two types of sensors - a 500 mm sensing range diffuse type (no reflector needed) or a 3000 mm sensing range reflector type - all depending on the need. Other special sensors can be supplied on request such as laser sensors.

All this comes in a simple package at almost the same cost as the competition!

The system can be programmed to suit any special application the customer may have for blowoff systems, other automation applications or it can be tied into existing automated systems.

It is easily connected for either 110V or 220V making it suitable for worldwide use. The package is designed for all types of industrial environments including wash downs. This rugged unit is easy to install in tight places and is flexible and easy to use.

A stainless steel Silent X-Stream™ Air Blade™ Air Knife is turned on and off automatically as the part to be dried passes under it.

ADVANTAGES:

- ▶ Easy to install and hook up - 110V to 220V
- ▶ Suitable for NEMA 4/IP56 environments
- ▶ Compact sensor for mounting in tight spaces
- ▶ Optional timer if desired - unit comes preset for tight on-off control for best results in saving air - a true optimizer
- ▶ Box has four mounting lugs for easy mounting
- ▶ Choice of sensors for use up to 3000 mm (10 feet)
- ▶ Sensors withstand water, dust, oil and coolant
- ▶ Sensors have superior immunity to noise and Inductive loads

THE BEST CHOICE FOR OPTIMIZING YOUR OPERATION AND SAVING COMPRESSED AIR

Photoelectric sensor withstands dirt and water - two types of sensors are available, diffuse type or reflector type

PLCFC - HOW IT WORKS

PLC Flow Control Systems (PLCFC) - The PLCFC combines a photo electric sensor to turn on the air when the target passes the sensor and to turn off the air when it leaves the sensor. (The unit is set to have a 2 second delay after it leaves the sensor but turns on instantaneously when it sees the target). In one example using an Air Knife, compressed air enters at point (A) into the Air Knife (B) only when the sensor (C) sees the target. The PLCFC is located at point (D). The target part (E) passes the sensor activating a solenoid to turn on the air flow to the Air Knife. The target travels on the conveyor (F). Two seconds after the target has passed the sensor, the air supply is turned off conserving energy. Different sensors are available for different applications and the units can be programmed for special applications.

APPLICATIONS :

- ▶ Parts dust and debris blowoff
- ▶ Drying of parts
- ▶ Cleaning of parts before packaging
- ▶ Filing operations
- ▶ Cooling hot parts
- ▶ Static elimination & cleaning of plastic parts

PLC FLOW CONTROLLER SYSTEM

PART NO.	DESCRIPTION
90055-40D	40 SCFM SYSTEM (includes one diffuse type sensor)
90055-40R	40 SCFM SYSTEM (includes one reflector type sensor)
90055-100D	100 SCFM SYSTEM (includes one diffuse type sensor)
90055-100R	100 SCFM SYSTEM (includes one reflector type sensor)
90055-200D	200 SCFM SYSTEM (includes one diffuse type sensor)
90055-200R	200 SCFM SYSTEM (includes one reflector type sensor)
90055-350D	350 SCFM SYSTEM (includes one diffuse type sensor)
90055-350R	350 SCFM SYSTEM (includes one reflector type sensor)

PLCFC APPLICATION - Compressed air use is reduced by 70% utilizing the PLCFC. Two Air Amplifiers used to cool castings only operate when the sensor "SEES" the castings and shuts them off two seconds after the castings are cooled. No timers need to be set.

Air Amplifiers cool the castings as they move along a conveyor. The sensor detects the part to turn on the amplifiers. The air turns off after 2 seconds after the castings have passed - an ideal "Plug and Play" solution to save compressed air.

ULTRASONIC LEAK DETECTOR

Locate costly compressed air leaks with optimum designed unit

WHAT ARE THEY - REASONS TO USE

The Flex.US Ultrasonic Leak Detector is a hand held, high quality compressed air leak detection system that has all the features necessary for flexible use in finding costly air leaks.

The FLEX.US ultrasonic leak detector kit comes with the FLEX.US unit, carrying case, and manual and utilizes two AA alkaline batteries (included). The FLEX.US is a complete kit - the high quality flexible sensor is mounted on the end of a flexible steel pipe so the ultrasonic sound can access hard to reach areas. The unit converts the ultrasonic noise of a leak into a sound humans can hear (hissing sound) and not just some beeping sound or LED display that may not distinguish a leak sound from other phenomenon.

The headset has excellent noise attenuation for use in the noisiest of environments.

A rugged carrying case protects your FLEX.US when not in use.

The FLEX.US is a solid tool - built to last, it is easy to use and will provide many years of service.

Above shows use of quality headphones and flexible pipe with sensor to get to a difficult spot to find an air leak.

SMART N CLEVER™
MORE THAN INTELLIGENT

The Flex.US Ultrasonic Leak Detector has the sensor on the end of a flexible pipe to allow detection of leaks in difficult to reach areas.

The Ultrasonic Leak Detector comes in a handy carrying case to store the unit and quality headphones. The headphones are durable and of high quality to cut out extraneous noise that would make it difficult to detect leaks.

HOW ULTRASOUND WORKS

Ultrasound is beyond human hearing capacity. Most humans hear frequencies from 2- Hz to 20 kHz. Ultrasonic sound is beyond this range at 20 kHz to 100 kHz. The FLEX.US unit converts the ultrasonic sound to an audible range to humans. Compressed air leaks generate this range of ultrasound "noise" that the unit picks up.

WHY OUR ULTRASONIC LEAK DETECTOR DOES THE JOB AND WHY OTHERS MAY NOT

REMEMBER:

The better the system, the more leaks you find and the more money you save! Always beware of cheap ultrasonic leak detectors that just may not do the job. Ours does the job because of the following:

FIRST:

Look at the headphones. If they are an open walkman style, these will be useless in a noisy plant because they offer absolutely NO protection from the ambient noise which can be at high levels! (After all, why else would you need an ultrasonic lead detector!) So how can you hear the leak in the headphone without protection from the ambient audible noise in the plant? Our headphones completely cover the ear providing 130 dBA hearing protection. Some competitive units would not be useable in a typical factory where hearing protection is mandatory because the inspector would have to insert ear plugs in his ears. Our headphones don't require this.

Quality head phones block out plant noise to make it easy to listen for, and locate an air leak with the Flex.US system.

SECOND:

Look at frequency range. Our frequency is centered at 38.4 kHz with an open window of +/- 2 kHz. By having a bandwidth this narrow we are able to eliminate other sources of ultrasonic parasite noise. It is absolutely critical that you amplify just this narrow single harmonic band of sound. Some detectors amplify every frequency from 20 kHz up to 100 kHz. That's because the manufacturer did not include any low pass filters. This also affects the output signal in the headphones. It also affects the directionality of the device. At low frequency it is much more difficult to know where the sound is coming from because the wavelength is larger and more reflective.

THIRD:

Extension tubes. For accessing tight areas some firms suggest using a hollow tube (tubular extension) with their system. Ultrasound will not travel well into this tube so the equipment will be less sensitive in hard to reach areas. If the tube is 6" long for example, that means the sensor is always a minimum of 6" away from the source. The Nex Flow™ system sensor is at the end of the flexible extension so the sensor is "always" directly exposed to the leak making our equipment much more sensitive. If more sensitive of course you will more easily detect the leak (one you may not even find with another system.)

THE BETTER THE SYSTEM THE MORE LEAKS YOU FIND THE MORE YOU SAVE.

ULTRASONIC LEAK DETECTOR

PART NO.	DESCRIPTION
90061	ULTRASONIC LEAK DETECTOR SYSTEM

Nex Flow™ aims to be the lowest cost where possible but NOT at the expense of sacrificing quality.

X-STREAM™ FLOW METER

Check air flow - monitor usage and waste!!!

WHAT ARE THEY - REASONS TO USE

THE X-STREAM™ FLOW METER IS

- ▶ Reliable, durable thermal mass flow technology
- ▶ Milliamp and pulse outputs for logging and remote monitoring
- ▶ 100:1 turndown capability
- ▶ Available for steel pipe, ½" through 2"
- ▶ No calibration or setup required
- ▶ Complete flow meter in one package

The X-STREAM™ FLOW METER represents a radical departure from conventional flow meter designs, providing easy installation, low cost, and accurate placement of the probes in the air stream. The meter clamps around a pipe with its probes projecting into the pipe through drilled holes. The low cost of the meter makes it ideal for installation at points throughout an air distribution system to track valuable compressed air and assess system operation.

SPECIFICATIONS:

Accuracy	: 5 percent of reading plus one percent of full scale at air temperatures between 40°F and 120°F
Fluids	: Compressed air and nitrogen
Operating pressure	: 30 to 170 psig for best accuracy 200 psig maximum on Schedule 40 steel.
Input power	: 250 mA at 18 to 24 Vdc
Output resistance	: 400 Ohms max.
Wetted materials	: Stainless steel, gold, thermal epoxy and Viton (seal)
Ring material	: Aluminum
Display	: Four-digit LED display
Response time	: One second to 63 percent of final value
US Patent 6,802,217	

The X-Stream™ Flow Meter measures mass flow based on heat and on pipe diameter. Accurate flow rate tracks air consumption.

I.D. FOR 1" OR 2" SCHEDULE 40 PIPE
OUT SIDE PIPE STANDARD AVAILABLE

The X-Stream™ Flow Meter clamps onto a pipe, with two flow sensing probes projecting into the pipe through 3/16-in. drilled holes. It seals directly to the pipe; no cutting or welding is required for installation. Because each flow meter is made and calibrated for a specific size of pipe, the digital display indicates flow directly, with no setup or adjustment. The meter measures flow by maintaining one probe warmer than the other. It calculates the mass velocity from the amount of heat required, and then calculates the flow on the basis of pipe area. The flow rate, in SCFM, is shown on a large, four-digit display; a 4-20 mA output and a pulse output permit remote display, totalizing and data collection. Metric display is optional.

ULTRASONIC LEAK DETECTOR

PART NO.	DESCRIPTION
90092	1" (Schedule 40 iron pipe) 1 - 80 SCFM without Drill Guide Kit
90093	1.5" (Schedule 40 iron pipe) 2 - 200 SCFM without Drill Guide Kit
90095	2" (Schedule 40 iron pipe) 3 - 300 SCFM without Drill Guide Kit
DRG-9	Drill Guide Kit Only
90092-DRG-9	1" (Schedule 40 iron pipe) 1 - 80 SCFM with Drill Guide Kit
90093-DRG-9	1.5" (Schedule 40 iron pipe) 2 - 200 SCFM with Drill Guide Kit
90095-DRG-9	2" (Schedule 40 iron pipe) 3 - 300 SCFM with Drill Guide Kit
ABOVE FOR AMERICAN STANDARD STEEL PIPING - CAN ALSO SUPPLY TO DIN STANDARD OTHER PIPE SIZES & COPPER. QUOTE ON REQUEST	

X-STREAM™ SOUND LEVEL METER

Monitor sound levels to assure worker safety

WHAT ARE THEY - REASONS TO USE

NEX FLOW™ X-Stream™ Sound Level Meters measure and monitor the sound level in all types of industrial environments. Used for compressed air exhaust noise measurement it can identify areas where costly and inefficient blow off can be replaced by energy efficient Nex Flow™ blow off products. In many instances, noise may be reduced using amplification products as much as 10 dBA, to protect workers from excessive and damaging noise levels and reduce energy use.

Model 91004 Low/High Range Sound Level Meter Dual-range Type 2 digital sound level meter with backlit LCD

FEATURES:

- ▶ High accuracy meets ANSI and IEC 651 type 2 standards
- ▶ High and Low measuring ranges
- ▶ Data Hold and Max Hold functions
- ▶ Backlit display to view in dimly lit area
- ▶ Complete with microphone wind screen and 9V Battery

SPECIFICATIONS:

- ▶ Display Counts 2000 count LCD
- ▶ Range Low: 35 to 100 dBA
- ▶ High: 65 to 130 dBA
- ▶ Basic Accuracy ± 1.5 dBA
- ▶ Weighting (A & C) Yes
- ▶ Response Time (Fast/Slow) Yes
- ▶ Condenser Microphone 0.5" (12.7 mm)
- ▶ Dimensions 8.2x2.1x1.25" (210x55x32 mm)
- ▶ Weight 8.1 Oz (230 gm)

X-STREAM™ SOUND LEVEL METER

PART NO.	DESCRIPTION
91004	Standard Sound Level Meter
91005	Sound Meter with data logging

Model 91005 Data logging Sound Level Meter Stores up to 20,000 records with real date and time Stamp Meets ANSI and IEC61672-1 Type 2 standards

FEATURES:

- ▶ 30 to 130 dBA range with 1.4 dBA accuracy
- ▶ Meets ANSI and IEC61672-1 Type 2 standards
- ▶ Data logging capability up to 20,000 records at speed from 1/sec to 1/59sec
- ▶ Capture up to 10 reading/sec when connected to a PC
- ▶ MIN/MAX, Data Hold, Auto power off
- ▶ Built-in USB port, double molded housing with built-in stand
- ▶ Complete with AC adaptor, Windows® compatible software, USB cable, wind cover, tripod, 9V battery and hard carrying case

SPECIFICATIONS:

- ▶ Range 30 to 130 dBA
- ▶ Basic accuracy ± 1.4 dBA
- ▶ Weighting A and C
- ▶ Response Time Fast/Slow
- ▶ Analog Output AC/DC
- ▶ Data logging 20,000 points
- ▶ PC Interface USB
- ▶ Dimensions 10.9 x 3 x 2" (278 x 76 x 50 mm)
- ▶ Weight 12.3 Oz (350 gm)

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE

Blowoff, clean, cool and dry with this quiet, sharp and strong focused curtain of air

WHAT ARE THEY - REASONS TO USE

The Silent X-Stream™ Air Blade™ Air Knife is easy to mount and maintain, reducing both compressed air consumption and noise levels. It is the most efficient design yet achieved in Air Knife blow off technology in reducing noise levels and air consumption yet providing the optimum in blow off energy.

The Silent X-Stream™ Air Blade™ Air Knife produces a "laminar" flow of air along its length using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with a small amount of compressed air from the X-Stream™ Air Blade™ Air Knife to produce an output flow up to 40 times.

System payback on compressed air savings can be as soon as a few weeks in some applications.

The Silent X-Stream™ Air Blade™ Air Knife comes in three versions: Gold Anodized Aluminum for most applications, Hard Anodized aluminum for abrasive environments or where material may come in contact and tend to wear against the air knife, and stainless steel for high temperature and corrosive environments.

NOTE: Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses ONLY stainless steel shims.

Available in Hard Anodized aluminum for abrasive environments or where material may come in contact with the air knife.

Model 10006X Silent X-Stream™ Air Blade™ Air Knife cleans a small conveyor of dust and debris.

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE FEATURES:

- ▶ No moving parts - Gold Anodized aluminum, Hard Anodized aluminum or stainless steel.
- ▶ Compact design, simple, lightweight and portable.
- ▶ Full flow - Air across entire length of Air Knife.
- ▶ Air inlets at ends and back.
- ▶ Driven by air not electricity.
- ▶ Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling.
- ▶ High airflow amplification.
- ▶ Instant on-off, no electricity or explosion hazard.

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE BENEFITS:

- ▶ Longer life in difficult environments than competitive models.
- ▶ Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- ▶ Can be placed end to end for continuous airflow.
- ▶ Maintenance free with output easily controlled, safe to use.

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE ADVANTAGES OVER BLOWERS:

- ▶ Compact design, simple, lightweight and portable.
- ▶ Driven by air, not electricity for safety.
- ▶ No moving parts - Hence safer and maintenance free.
- ▶ Lower noise levels at 69 dBA and less with smaller space.

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE APPLICATIONS:

- ▶ Cleaning of steel sheet in strip mills
- ▶ Parts drying
- ▶ Cleaning or drying web processes.
- ▶ Pre-paint drying and blowoff
- ▶ Scrap removal
- ▶ Parts cooling
- ▶ Circuit board cooling
- ▶ Use for environment separation with air curtain effect
- ▶ Opening bags for filling
- ▶ Sheet separation

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE VERSES OTHER BLOWOFF PRODUCTS:

1. **Drilled Pipe** - Typically drilled pipe uses more compressed air while producing inconsistent flow at high noise levels. The Silent X-Stream™ Air Blade™ Air Knife can usually cut air costs as much as 50%.
2. **Flat Air Nozzles** - These products can use even more compressed air than drilled holes with the same problems of inconsistent flow at high noise levels.
3. **Air Blowers** are capital intensive but can use less energy than compressed air operated air knives on a continual basis. However blowers cannot be cycled on and off quickly and can actually use the same or more energy in intermittent applications. Choosing a blower or Silent X-Stream™ Air Blade™ Air Knife depends on the following factors:
 - (A) **Availability of a particular energy source** - is electricity or air the most convenient.
 - (B) **Space and Weight** - These are important factors that affect the overall cost and maintenance of a system. The compressed air operated Air knife is light weight and compact.
 - (C) **Noise level** - The Silent X-Stream™ Air Blade™ Air Knife is intrinsically quiet while blower systems are noisy and require costly silencing.
 - (D) **Application particulars** - The specific application often determines what is best to use. Intermittent blowoff and/or tight spaces favor the use of the Silent X-Stream™ Air Blade™ Air Knife.
 - (E) **Reliability** - Blower systems require maintenance because they have moving parts. The Silent X-Stream™ Air Blade™ Air Knife requires no maintenance when properly filtered and is intrinsically the most reliable.
 - (F) **Energy Cost** - Energy cost can be less with a blower system especially on continuous blowoff applications. However, energy cost can often be offset against higher capital costs and maintenance costs when utilizing blower systems. The Silent X-stream™ Air Blade™ Air Knife is low cost with negligible maintenance.
 - (G) **System Cost** - Much higher for blower systems especially if silencing is required. It is low for Silent X-Stream™ Air Blade™ Air Knives.
 - (H) **Maintenance and Operating Cost** - The need for maintenance of blower systems can be a strong negative in some situations, especially if the blowers or electrical systems are in harsh environments. The Silent X-Stream™ Air Blade™ Air Knife however is resilient to harsh environments in comparison

A special HDPE 24" plastic Silent X-Stream™ Air Blade™ Air Knife was made for an environment that could not tolerate even stainless steel. The air gap was machined. The screws of the Air Blade™ were covered by a separate HDPE strip.

A stainless steel 36" Silent X-Stream™ Air Blade™ Air Knife blows off excess sugar from muffins prior to the oven to avoid burning. A Model 90009 Regulator with gauge sets the ideal pressure and flow.

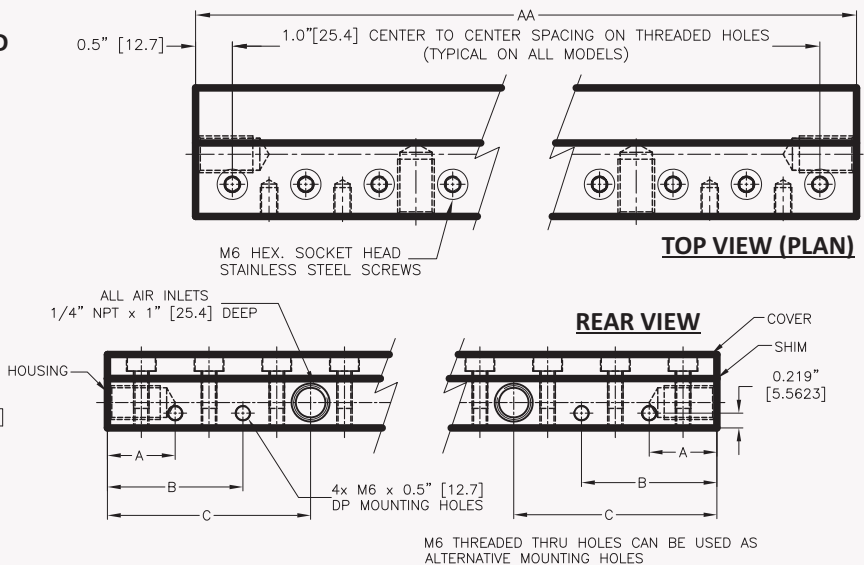

SILENT X-STREAM™ AIR BLADE™ AIR KNIFE - HOW IT WORKS:

Silent X-Stream™ Air Blade™ Air Knife - Compressed air enters the Air Knife at the rear (or end) ports at (A). Air is entrained at point (B) and (D) by the compressed air stream that leaves the Air Knife from a small gap at point (C). The entrained air follows the profile that directs the airflow in a perfect straight line to create a uniform sheet of air along the entire length of the Air Blade™ Air Knife. The amplified air stream maximizes velocity and force is maintained as a well defined sheet of laminar flow with minimal wind shear for reduced energy use in blowoff and cooling.

X-Stream™ Air Blade™ Air Knife is available in Thirteen (13) standard lengths in Regular Anodized Aluminum, Hard Anodized Aluminum and in Stainless Steel: 2" (51mm), 3" (76mm), 6" (150 mm), 9" (229 mm), 12" (305 mm), 15" (382 mm), 18" (457mm), 24" (610 mm), 30" (761mm), 36" (914mm), 42" (1067mm), 48" (1219 mm) and 54" (1372 mm).

GOLD ANODIZED AND HARD ANODIZED ALUMINUM SILENT X-STREAM™ AIR BLADE™ AIR KNIFE

STAINLESS STEEL SILENT X-STREAM™ AIR BLADE™ AIR KNIFE

(* BSP Threads or Adaptors can be supplied depending on country location)

DIMENSION TABLE OF SILENT X-STREAM™ AIR BLADE™ AIR KNIFE – GOLD ANODIZED ALUMINUM

PART NO. (Gold Anodized Aluminum)	AA Inches (mm)	A Inches (mm)	B Inches (mm)	C Inches (mm)	No. of Rear Inlets (Side Inlets)

Model 10054X Gold Anodized Aluminum	54"(1371.6)	1"(25.4)	2"(50.8)	9"(228.6)	3(2)

NOTE: For sizes 48" and longer there is a third rear inlet port in the middle, 1/4" NPT on same level as the other two rear inlet ports.

USE OF SHIMS:

Nex Flow™ uses **ONLY** stainless steel shims in their Air Knife products as plastic shims wear out over time and require replacement, even with relatively clean air systems. Stainless steel shims are .002" (.050 mm). In most applications this is adequate. However, velocity and force can be increased approximately 30% by adding a second .002" (.050 mm) shim. Shims may be stacked up to 5 sets. If using three or more sets however, the air inlets at the "ends" should be used to maintain even flow along the Air Knife system. Otherwise a slight drop in pressure and flow will occur across from the rear inlet ports if they are used with three or more shims. Note that noise levels and air use will go up with an increased number of shims.

MOUNTING:

Mounting holes are provided for easy mounting of the Silent X-Stream™ Air Blade™. In addition, the holes at the bottom of the unit may also be used for mounting.

SPECIAL AIR KNIVES:

Do you need a special length? Do you need a different shape or profile or material? Nex Flow™ can supply special units and address any unique situation. We have produced special lengths and made Air Knives in HDPE and other materials as requested.

ACCESSORIES:

It is important to keep the air supply clean and dry. We recommend a water removal filter with a float type automatic drain with a minimum filtration of 5 micron. If there is a chance of oil in the lines, we suggest an oil removal filter as well with a minimum filtration of 0.3 micron, also with an automatic drain. To minimize air use, we recommend a regulator with gauge to set the minimum pressure necessary to operate the system. If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

HARD ANODIZED SILENT X-STREAM™ AIR BLADE™ AIR KNIFE

Blowoff, clean, cool and dry with this quietly in sticky, abrasive environments.

WHAT ARE THEY - REASONS TO USE

The Hard Anodized version of the Silent X-Stream™ Air Blade™ Air Knife is just as easy to mount and maintain, reducing both compressed air consumption and noise levels. It has the extra benefit of a protective coating that is more resistant to sticky material such as floating oils and has excellent resistance to abrasive action such as materials that could rub onto, or brush against the air knife in production. As with the regular anodized versions, it is still the most efficient design yet achieved in Air Knife blow off technology in reducing noise levels and air consumption yet providing the optimum in blow off energy.

The Hard Anodized Silent X-Stream™ Air Blade™ Air Knife™ produces a “laminar” flow of air along its length using the “Coanda” effect which “entrains” a large volume of air from the surrounding area along with a small amount of compressed air from the X-Stream™ Air Blade™ Air Knife to produce an output flow of up to 40 times.

System payback on compressed air savings can be as soon as a few weeks in some applications.

NOTE: Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses ONLY stainless steel shims.

HARD ANODIZED SILENT X-STREAM™ AIR BLADE™ AIR KNIFE FEATURES:

- ▶ No moving parts - Gold Anodized aluminum, Hard Anodized aluminum or stainless steel.
- ▶ Compact design, simple, lightweight and portable.
- ▶ Full flow - Air across entire length of Air Knife.
- ▶ Air inlets at ends and back.
- ▶ Driven by air not electricity.
- ▶ Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling.
- ▶ High airflow amplification.
- ▶ Instant on-off, no electricity or explosion hazard.

HARD ANODIZED SILENT X-STREAM™ AIR BLADE™ AIR KNIFE BENEFITS:

- ▶ Longer life in difficult environments than competitive models.
- ▶ Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- ▶ Can be placed end to end for continuous airflow.
- ▶ Maintenance free with output easily controlled, safe to use.

HARD ANODIZED SILENT X-STREAM™ AIR BLADE™ AIR KNIFE ADVANTAGES OVER BLOWERS:

- ▶ Compact design, simple, lightweight and portable.
- ▶ Driven by air, not electricity for safety.
- ▶ No moving parts - Hence safer and maintenance free.
- ▶ Lower noise levels at 69 dBA and less with smaller space.

Just as we can provide special air knives made of different materials such as the HDPE plastic Silent X-Stream™ Air Blade™ shown, Nex Flow™ can provide special coatings to address specific applications and environments.

If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ AIR KNIFE VERSUS OTHER AIR KNIVES WITH STRAIGHT OUT BLOW OFF PROFILES

There are a few companies that produce compressed air operated air knives where the compressed air comes out straight as it does with the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ air knife. However, the internals can be quite different and it can make a big difference in performance.

Often air knife literature focus solely on compressed air consumption when in fact, it is not only the compressed air consumption which is important, but also the force produced. For the designs used by known air knife producers (where the compressed air comes out straight and entrains surrounding air similar in principle to the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design) the efficiency of blow off performance or FORCE/SCFM is essentially the same. What is important is the actual force needed for any particular application. However the NEX FLOW™ design will provide the same force and same air consumption as most of these other designs but at a lower pressure.

Since it takes less energy to produce compressed air at a lower pressure than at a higher pressure the NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design is actually the "MOST EFFICIENT" when these factors are taken into account. The difference is based on the internal design. The NEX FLOW™ SILENT X-STREAM™ AIR BLADE™ design internally is the secret, minimizing the use of small air channels or anything that can cause restrictions and energy losses.

EXAMPLE: Here are actual measurements for the Nex Flow™ Model 10012X – X-Stream™ Air Blade™ Air knife and a Competitors equivalent.

NEXFLOW

Inlet Pressure(PSIG)	10	20	30	40	50	60	70	80	90	100	110	120
Force (lb)	0.018	0.201	0.454	0.747	1.08	1.453	1.866	2.319	2.812	3.345	3.918	4.531
Flow (SCFM)	6.95	11.53	16.7	22.47	28.85	35.82	43.4	51.57	60.34	69.72	79.69	90.27

COMPETITOR

Inlet Pressure(PSIG)	10	20	30	40	50	60	70	80	90	100	110	120
Force (lb)	0.01	0.14	0.31	0.51	0.74	1.00	1.28	1.59	1.93	2.3	2.69	3.11
Flow (SCFM)	5.11	8.48	12.28	16.52	21.22	26.34	31.92	37.92	44.37	51.27	58.6	66.38

If you take the Nex Flow™ figures at 80 PSIG (IN BLUE) you see that they compare well to the competitors figures at 100 PSIG (IN RED). Efficiency as to FORCE/UNIT OF AIR USE OR SCFM is virtually identical. However Nex Flow™ can produce the force required at 20 PSI "LOWER" pressure. It is well known that reducing pressure even by 10% PSIG can save as much energy as 5% on a compressor. **REPLACING EVEN A COMPETITORS' AIR KNIFE MAY SAVE 10% or more just because you can run at lower pressure for the same application!!!! A SIGNIFICANT SAVING!!!**

In any application, you would adjust the pressure as low as possible to perform the desired application. Put side by side a competitor's air knife, just by being able to use it at lower pressure, and to be able to run your systems at a lower pressure, can save significant cost.

Velocity is important in that it can determine the cooling effect and is also related to the blowoff force. Velocity will vary significantly depending on the temperature of the ambient air - The hotter the air, the greater the velocity (and the greater the amplification of the air flow). So velocity figures at best are an approximation. As air is entrained, the flow increases and as the flow increases the velocity must come down. The velocity at the exit of the Silent X-Stream™ Air Blade™ Air Knife is the highest but the figure is of no value as once the surrounding air is entrained, the velocity drops dramatically. (Be wary of extremely high velocity claims downstream of any Air Knife or Air Amplifier). The figures provided by Nex Flow™ can be verified with a velocity meter. There will be some variations in measurement due to different air pressure and atmospheric conditions. The velocity is, among other things, dependent on the chamber pressure. That pressure in turn depends upon pipe size, pressure drops in the system, distance from the compressor station to the point of use, and many other factors.

SUPER QUIET, SUPER CONCENTRATED KNIFE EDGE AIR STREAM
PROFILE OF SILENT X-STREAM™ AIR BLADE™ AIR KNIFE

ACCESSORIES

It is important to keep the air supply clean and dry. We recommend a water removal filter with a float type automatic drain with a minimum filtration of 5 micron. If there is a chance of oil in the lines, we suggest an oil removal filter as well with a minimum filtration of 0.3 micron, also with an automatic drain.

To minimize air use, we recommend a regulator with gauge to set the minimum pressure necessary to operate the system. If the system can be turned on and off as necessary, we recommend a system such as our PLCFC System as described in Section A.

OPTIONAL SILENT X-STREAM™ AIR BLADE™ AIR KNIFE COUPLING KIT.

This one piece kit c/w 10 stainless steel screws connects any two Silent X-Stream™ Air Blade™ Air Knife of 6" or larger together to make a longer blowoff system to cover greater distances. The units come in three models. Model 10900X gold anodized aluminum for the gold anodized aluminum Silent X-Stream™ Air Blade™ Air Knives, Model 10900XHA for the Hard Anodized units, and Model 10900XS stainless for stainless steel models.

CALCULATING AIR SAVINGS

To obtain the air consumption of drilled holes in pipe, determine the size of the holes and multiply the air loss by the number of holes over the length. The air consumption of the X-stream air blade air knife is read off the performance tables.

EXAMPLE:

Assume an existing blowoff of a 24" long pipe with 3/32" holes spaced equally apart for a total of 32 holes. At 80 PSIG, from the graph, each hole consumes about 9.4 SCFM for a total of $32 \times 9.4 = 300.8$ SCFM.

At 80 PSIG, a 24" X-stream air blade air knife consumes 80 SCFM (from the performance chart).
Compressed air saved is $300.8 - 80 = 220.8$ SCFM.

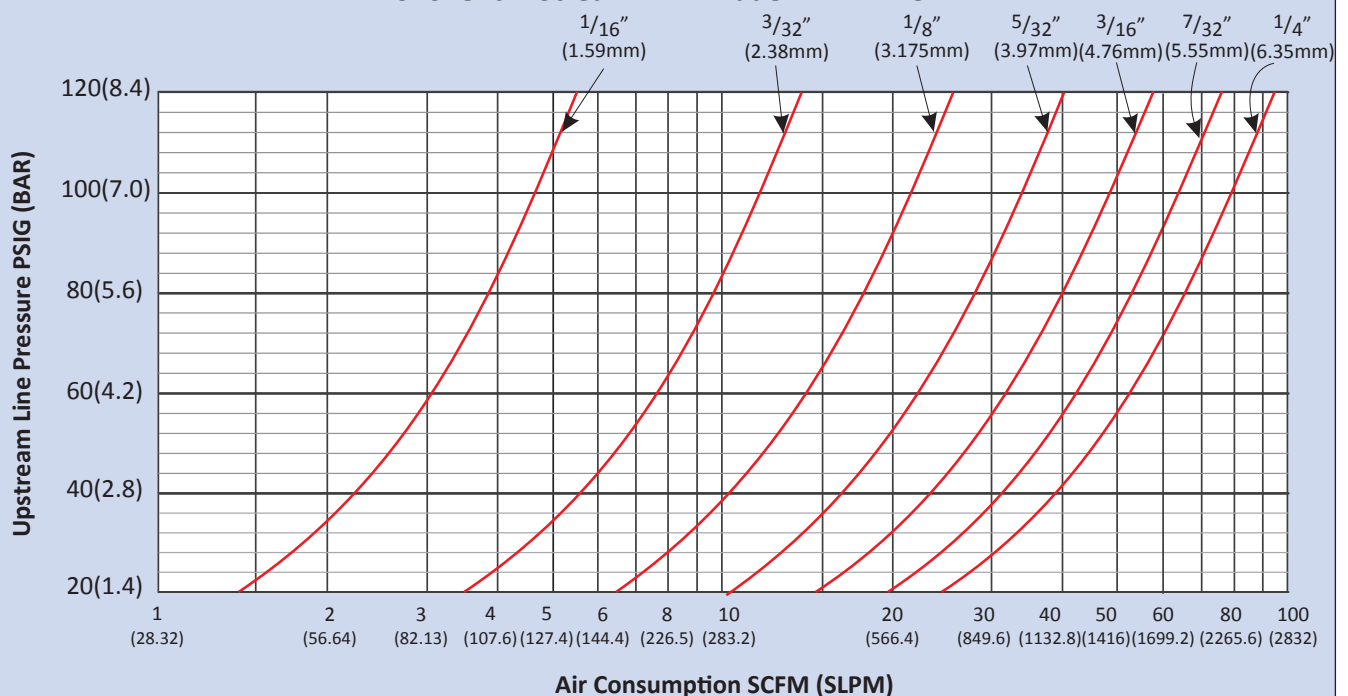

Using actual air costs if known (or assuming a reasonable cost of \$0.30 US per 1000 cubic feet) the dollars saved is $220.8 \times 60 \times 0.30 / 1000 = \3.97 per hour or assuming a 2000 hour working year = \$7940.00 US funds saved annually.

Please refer to the Addendum on the explanation of Air Flow Amplification for a detailed explanation on what it is and how air amplification works.

A Model 10036XS 36" stainless steel Silent X-Stream™ Air Blade™ Air Knife removes water from vegetables on a conveyor.

Diameter of hole in pipe in Inches (mm) and air consumption per Inch (25.4mm) of Silent X-Stream™ Air Blade™ Air Knife

10900X: Stainless Steel X-Stream™ Air Blade™ Air Knife Coupling Kit c/w 10 screws to couple together any Stainless Steel Silent X-Stream™ Air Blade™ Air Knife from 6" & up.

NOTE: Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses ONLY stainless steel shims.

STANDARD AIR BLADE™ AIR KNIFE

Blowoff, clean, cool and dry with a strong curtain of amplified airflow.

WHAT ARE THEY - REASONS TO USE

Standard Air Blade™ Air Knife Blowoff System from Nex Flow™ is easy to mount and maintain, reducing both compressed air consumption and noise levels.

The Standard Air Blade™ Air Knife Blowoff System produces a "Laminar" flow of air along its length using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with the small amount of compressed air from the Air Blade™ Air knife to produce an output flow up to 30 times. System payback on compressed air savings can be as soon as a few weeks in some applications. It is less costly than the highly efficient and quiet Silent Air Blade™ Air Knife but it is popular for more heavy duty installations due to its greater bulk. In addition, it is excellent for some applications when mounted flush to a flat surface to create an extended air barrier along that surface. Normally the X-Stream™ version is most efficient although the Standard would be lowest initial cost.

A Model 10018 Standard Air Blade™ Air Knife is used to blow scrap pieces and dirt from cellular phone parts after machining.

STANDARD AIR BLADE™ AIR KNIFE FEATURES:

- ▶ No moving parts - anodized aluminum or stainless steel
- ▶ Compact design, simple, lightweight and portable
- ▶ Rugged design
- ▶ Full flow - air across entire length of Air Knife
- ▶ Air inlets at ends and back
- ▶ Driven by air not electricity
- ▶ Replaces drilled pipe and open jets or nozzles used for blowoff, cleaning, drying and cooling
- ▶ High airflow amplification
- ▶ Instant on-off, no electricity or explosion hazard

STANDARD AIR BLADE™ AIR KNIFE BENEFITS:

- ▶ Longer life in difficult environments than competitive models
- ▶ Lower compressed air consumption than drilled pipe or rows of open jets and nozzles.
- ▶ Can be placed end to end for continuous airflow.
- ▶ Maintenance free with output easily controlled, safe to use.

Mounting and holding systems are available for the Standard Air Blade Air Knife. Fully flexible positioning
See Accessories

STANDARD AIR BLADE™ AIR KNIFE - HOW IT WORKS:

Standard Air Blade™ Air Knife - Compressed air enters the Air Knife at the rear (or end) ports at (A). Air is entrained at point (B) by the compressed air stream that leaves the Air Knife from a small gap. The entrained air follows the "Coanda" profile along the front face (C) that directs the air flow in a perfect straight line at 90 degrees to create a uniform sheet of air along the entire length of the Air Blade™ Air Knife. As the air leaves the Air Knife at point (D) the amplified air stream maximizes velocity and force is maximized as a well-defined sheet of laminar flow with minimal wind shear for reduced energy use in blowoff and cooling.

NOTE: Plastic shims can wear out quickly in Air Knives if the air is not clean. Nex Flow™ uses only stainless steel shims.

Standard Air Blade™ Air Knife is available in eight standard lengths in anodized aluminum and in seven lengths in stainless steel: 3" (76 mm), 6" (150 mm), 8" (203.2 mm) (not available in stainless), 12" (300 mm), 18" (457 mm), 24" (609.5 mm), 30" (761 mm), 36" (914 mm)

(* BSP Threads or Adaptors can be supplied depending on country location)

NOTE:

The performance of the X-Stream™ Air Blade™ Air Knife and the Standard Air Blade™ Air Knife will be relatively the same given "same" internal chamber conditions. However, due to design the X-Stream™ Air Blade™ will use about 15% "LESS" compressed air. This generally means less air line pressure drop and "higher" chamber pressures in an X-Stream™ Air Blade™ given the same application and therefore superior performance (as well as lower noise levels). The Standard Air Blade™ Air Knife however is lower cost has applications suited to its unique design.

A Model 10003 3" Standard Air Blade™ Air Knife is mounted such that the surface of the Air Knife is flush with the surface of a camera lens. The air flows along the surface of the Air Knife and continues along the lens due to a boundary layer effect that provides a laminar "barrier" to the dirty environmental air, keeping the lens clean and dry.

Two Model 10012 Standard Air Blade™ Air Knives are installed on a duct (One on top, One on bottom) to draw in waste fumes & exhaust. The air leaving the Air Knives hug the inside wall creating an excellent vacuum inside the duct.

Velocity is important in that it can determine the cooling effect and to some extent is related to the blowoff force. Velocity will vary significantly depending on the temperature of the ambient air the hotter the air, the greater the velocity (and the greater the amplification of air flow) so velocity figures at best are an approximation. As air is entrained, the flow increases and as the flow increases the velocity must come down.

The velocity at the exit of the Standard Air Blade™ Air Knife is obviously the highest but the figure is of no real value as once the surrounding air is entrained, the velocity drops dramatically. (Be very wary of extremely high velocity claims downstream of any Air Knife). The figures we provide can be verified with a velocity meter. There will be variations in measurement due to air pressure, and atmospheric conditions. The velocity is, among these other things dependent on the chamber pressure. That pressure in turn depends upon pipe size, pressure drops in the system, distance from the compressor station to the use point, and many other factors.

CALCULATING AIR SAVINGS

To obtain the air consumption of drilled holes in pipe, determine the size of the holes and multiply the air loss by the number of holes over the length. The air consumption of the standard air blade air knife is read off the performance tables.

EXAMPLE:

Assume an existing blowoff of a 30" long pipe with 3/32" holes spaced equally apart for a total of 40 holes. At 80 PSIG, from the graph, each hole consumes about 9.4 SCFM for a total of $40 \times 9.4 = 376$ SCFM.

At 80 PSIG, a 30" standard air blade air knife consumes 61 SCFM (from the performance chart).
Compressed air saved is $376 - 61 = 315$ SCFM.

Using actual air costs if known (or assuming a reasonable cost of \$0.30 US per 1000 cubic feet) the dollars saved is $315 \times 60 \times 0.30 / 1000 = \5.67 per hour or assuming a 2000 hour working year = \$11340.00 US funds saved annually.

RING BLADE™ AIR WIPE

Blowoff, clean, cool and dry cable, pipe, extrusions, hose, wire and rope. Split design requires zero threading. Uniform 360 degree variable flow and force for temperatures up to 800°F (427°C)

WHAT ARE THEY - REASONS TO USE

Air Wipe Blowoff System - Ring Blade™ from Nex Flow™ is easy to mount and maintain, and reduces both compressed air consumption and noise levels.

It produces a "laminar" flow of air along its 360° angle using the "Coanda" effect which "entrains" a large volume of air from the surrounding area along with the small amount of compressed air from the Ring Blade™ air-saver wiper-blade to produce an output flow up to 30 times.

The Ring Blade™ air wipe blowoff system payback on compressed air savings can be as short as a few weeks when compared to nozzle "rings" or simple annular slots used by other air wiping systems. Blowoff, cool, and clean products such as cable, pipe, wire and hose.

RING BLADE™ AIR WIPE BLOWOFF SYSTEM BENEFITS:

- ▶ Longer life in difficult environments for aluminum models because of anodizing, 316L stainless models for high temperate and corrosive environments.
- ▶ Easy to install and maintain and allows removal of a continuous piece.
- ▶ Even blowoff around the part, light in weight and compact.
- ▶ Lower compressed air consumption than a ring of drilled pipe or ring of open jets and nozzles.
- ▶ Maintenance free with output easily controlled, safe to use.

RING BLADE™ AIR WIPE BLOWOFF SYSTEM FEATURES:

- ▶ No moving parts - anodized aluminum or 316L stainless steel
- ▶ Compact design, simple, lightweight and portable.
- ▶ Full Flow Split Design - air across entire circumference. Designed as two pieces hinged together to open & close around the part. The 2 pieces are connected with a hose to deliver the compressed air using a single connection (except for the 9" and 11" which have four inlet connections or two connections per half).
- ▶ Driven by air not electricity.
- ▶ High airflow amplification.
- ▶ Instant on-off, no electricity or explosion hazard.

RING BLADE™ AIR WIPE BLOWOFF SYSTEM APPLICATIONS:

- ▶ Blowoff of dust, liquid, contaminants and uniformly wipe surfaces.
- ▶ Dry after washing, plating or coating.
- ▶ Cool hot surfaces.
- ▶ Dry extruded profiles, plastic tubing, hose, wire, fiber optics, ribbon, strips.
- ▶ Prevent solution carryover and avoid cross contamination.
- ▶ Clean paint gun tips.
- ▶ Remove access water, coatings, oil.

RING BLADE™ AIR WIPE SYSTEM - HOW IT WORKS:

Ring Blade™ Air Wipe - Compressed air enters at point (A) into an annular chamber and throttled through a small ring nozzle at high velocity. This air stream clings to the "coanda" profile directing the air stream down toward the surface which is angled to create a "cone" style directed force to best clean, wipe and dry a surface. The surrounding air is entrained at point (B) creating an amplified 360 degree conical airflow at point (C) to uniformly wipe the surface of the of the material running through the Ring Blade™. The wet or dirty material (D) direction of travel is against the flow.

Ring Blade™ Air Wipe™ is available in eight standard sizes in anodized aluminum: ½" (12.7 mm), 1" (25.4 mm), 2" (50.8 mm), 3" (76 mm), 4" (102 mm), 5" (127 mm), 6" (152 mm) and 7" (178 mm) (with brass fittings and special rubberized plastic hose for standard applications or with stainless steel hose for moderate temperatures up to 400 F (204 C). The 9" (229 mm) and 11" (279 mm) is available in anodized aluminum. No hose supplied. May be used for standard and moderate temperatures to 400 F (204 C). **Ring Blade™ Air Wipe™** also is available in eight sizes in 316L stainless steel: ½" (12.7 mm), 1" (25.4 mm), 2" (50.8 mm), 3" (76 mm), 4" (102 mm), 5" (127 mm), 6" (152 mm) and 7" (178 mm) with stainless steel fittings and hose for high temperatures up to 800 F (427 C) and for corrosive environments.

High Temperature 316L Stainless Steel Ring Blade™ c/w all stainless fittings and hose.

9" and 11" units have two air inlets per side.

Two **Model 20002 - 2" Ring Blade™ Air Wipe** system are used to clean and dry extruded automotive trim. The design of the air wipe allows the blowoff force to get into the automotive trim gaps and effectively clean and dry the extruded part. If a bubble occurs in the trim, the Ring Blade™ air wipe can be opened up to pass the bubble

NOTE:

No hose kit supplied to connect the two halves for the 9" and 11"

20105-316L SYSTEM	5" 316L Stainless Steel Shim - .002" (.050 mm) for 5" 316L Stainless Ring Blade™ Air Wipe System
20107-316L SYSTEM	7" 316L Stainless Steel Shim - .002" (.050 mm) for 7" 316L Stainless Ring Blade™ Air Wipe System

AIR AMPLIFIERS

Blowoff, clean, cool and dry as well as vent and exhaust with no moving parts

WHAT ARE THEY - REASONS TO USE

Air Amplifiers or “Air Movers” are a simple, inexpensive device with virtually no maintenance that can convey fumes, smoke, light weight materials, and move a high volume of air for cooling, blowoff and drying applications. They use the “coanda effect” which entrains a large amount of surrounding air using only a small amount of compressed air. The effect is an amplification of up to 17 times the airflow or more (depending on the size) with reduced noise levels. Using only compressed air, the output flow and vacuum is easily controlled by adjusting or opening the air gap and/or inlet pressure. Either end of the amplifier may be ducted to address all kinds of applications from bringing in fresh air into an area to removing nasty fumes. Be wary of extremely high unrealistic or unsubstantiated amplification ratios claimed by some companies.

AIR AMPLIFIER FEATURES:

- ▶ No moving parts.
- ▶ Compact design, simple, lightweight and portable.
- ▶ Driven by air not electricity.
- ▶ Replaces fans used for blowoff, cleaning, drying, cooling and conveying.
- ▶ High airflow amplification.
- ▶ Instant on-off, no electricity or explosion hazard.

AIR AMPLIFIER BENEFITS:

- ▶ Longer life in difficult environments than competitive models.
- ▶ Lower compressed air consumption than ejectors and venturi.
- ▶ Maintenance free with output easily controlled, safe to use.

AIR AMPLIFIER ADVANTAGES OVER FANS:

- ▶ Compact design, simple, lightweight and portable.
- ▶ Driven by air, not electricity for safety.
- ▶ No moving parts hence safer and maintenance free.
- ▶ Each end can be ducted for light conveying applications.

SELECTION

The fixed unit being made of heavy duty zinc die cast is more ideal in rough environments where corrosion is not an issue. The aluminum Adjustable Air Amplifiers are light-weight and flexible because of being adjustable. Stainless steel adjustable units are meant for corrosive environments and for food/pharmaceutical applications.

TYPES OF AIR AMPLIFIERS

FIXED X-STREAM™ AIR AMPLIFIERS: made of zinc die cast system is solid and perform as well or better than many supposedly patented designs when used in similar applications. The gap can be adjusted by adding shims. Five sizes are available.

ADJUSTABLE AIR AMPLIFIER: made of anodized aluminum or stainless steel for high temperature or food applications. The customer can set the gap and lock it in place using a lock ring. Three sizes are available.

SPECIAL DESIGNS

Special designs are available to meet unique customer specifications. Specially treated stainless steel units have been made for a specific medical application and threaded adjustable versions have been made for a machine builder. Different materials can be provided as well as special sizes to fit any specific application.

Mounting and holding systems are available for the Air Amplifiers. Fully flexible positioning. See Accessories

FIXED X-STREAM™ AIR AMPLIFIERS - HOW IT WORKS:

A small amount of compressed air enters the annular chamber at point (A). That is then throttled through a small ring nozzle at high velocity and into the inside of the Amplifier over a “coanda” profile. The compressed air stream clings to the “coanda” profile as it enters the inside walls of the amplifier and thereby creating a vacuum that induces the outside air at point (B). Converting the pressure into amplified airflow. The amplified airflow leaves at the exit at point (C). Airflow is further amplified downstream at point (D). By entraining additional air from the surroundings at the exit.

Using Model FX20 Air Amplifiers to cool castings, cooling time was reduced by 20%

Two Model FX40 Air Amplifiers vent fumes from a tank quickly & efficiently

ADJUSTABLE AIR AMPLIFIER - HOW IT WORKS:

A large volume of surrounding air is induced into the Amplifier at point (A) by the action of a small amount of compressed air which enters the annular chamber at point (B) that is then throttled through a small ring Nozzle at high velocity and into the inside of the Amplifier over a coanda profile. The compressed air stream clings to the coanda profile as it enters the inside walls of the Amplifier and thereby creating a vacuum that induces the outside air converting the pressure into amplified airflow. The amplified airflow leaves at the exit at point (C). Airflow is further amplified downstream at point (D) by entraining additional air from the surroundings at the exit.

ADJUSTABLE AIR AMPLIFIER SPECIFICATIONS:

Normally set to .002" (.05mm) gap if greater air force is required, the gap is adjustable. The first two sizes of adjustable air amplifiers come in two versions – unmarked regular versions and marked to gauge the gap setting from 0 to 1.5 mm.

The Adjustable Air Amplifier can be adjusted to provide the blow-off force and/or vacuum required for any particular application. Made of anodized aluminum or stainless steel for corrosive and high temperature applications the unit offers flexibility in applications.

The Gauged Adjustable Air Amplifier with marking to indicate the settings from 0 to 1.5 mm comes in anodized aluminum for applications where accurate gap control is required. As with the regular adjustable unit the gap is locked into place with a lock ring.

Adjustable Air Amplifier mounting brackets allow for easy mounting. Available for the 1-1/4" and 2" sizes. Made in Stainless Steel.

Model 40002S Stainless Steel Adjustable Air Amplifiers cool hot spots on a duct where insulation has worn away until downtime can be scheduled.

Model 40001 Adjustable Air Amplifier vents dust from a machining operation.

ADJUSTABLE AIR AMPLIFIERS - ALUMINUM

PART NO.	DESCRIPTION
40000	3/4" Adjustable Aluminum Air Amplifier
40001	1-1/4" Adjustable Aluminum Air Amplifier
40002	2" Adjustable Aluminum Air Amplifier
40003	4" Adjustable Aluminum Air Amplifier
41001	1-1/4" Adjustable Aluminum Amplifier plus Filter with Auto Drain
41002	2" Adjustable Aluminum Amplifier plus Filter with Auto Drain
41003	4" Adjustable Aluminum Amplifier plus Filter with Auto drain
42001	1-1/4" Adjustable Aluminum Amplifier plus Filter with Auto Drain plus Regulator with Gauge
42002	2" Adjustable Aluminum Amplifier plus Filter with Auto Drain plus Regulator with Gauge
42003	4" Adjustable Aluminum Amplifier plus Filter with Auto Drain plus Regulator with Gauge

ADJUSTABLE AIR AMPLIFIERS - GAUGED SETTINGS

PART NO.	DESCRIPTION
40001G	1-1/4" Adjustable Aluminum Air Amplifier with Gauged Settings
40002G	2" Adjustable Aluminum Air Amplifier with Gauged Settings
41001G	1-1/4" Adjustable Aluminum Air Amplifier with Gauged Settings plus Filter with Auto Drain
41002G	2" Adjustable Aluminum Air Amplifier with Gauged Settings plus Filter with Auto Drain
42001G	1-1/4" Adj. Aluminum Air Amplifier with Gauged Settings plus Filter with Auto Drain plus Regulator with Gauge
42002G	2" Adj. Aluminum Air Amplifier with Gauged Settings plus Filter with Auto Drain plus Regulator with Gauge

ADJUSTABLE AIR AMPLIFIERS - STAINLESS STEEL

PART NO.	DESCRIPTION
40001S	1-1/4" Adjustable Stainless Steel Air Amplifier
40002S	2" Adjustable Stainless Steel Air Amplifier
40003S	4" Adjustable Stainless Steel Air Amplifier
41001S	1-1/4" Adjustable Stainless Steel Amplifier plus Filter with Auto Drain
41002S	2" Adjustable Stainless Steel Amplifier plus Filter with Auto Drain
41003S	4" Adjustable Stainless Steel Amplifier plus Filter with Auto Drain
42001S	1-1/4" Adjustable Stainless Steel Amplifier plus Filter with Auto Drain plus Regulator with Gauge
42002S	2" Adjustable Stainless Steel Amplifier plus Filter with Auto Drain plus Regulator with Gauge
42003S	4" Adjustable Aluminum Steel Amplifier plus Filter with Auto Drain plus Regulator with Gauge
40001 MTS	Mounting bracket for 40001, 40001G and 40001S
40002MTS	Mounting bracket for 40002, 40002G and 40002S

AIR NOZZLES AND JETS

Superior designed Air Nozzle and Jets reduce compressed air consumption and noise levels while maintaining Laminar Flow for Strong Blowoff

WHAT ARE THEY - REASONS TO USE

Air Nozzles are the smallest air amplifiers for point applications. There are two types: and aspirator or coned shaped type and so-called star-shaped profiles. The aspirator types provide greater flow amplification, ideal for cooling but have a lower force/air consumption ratio than star-shaped versions. So when higher force is more important, the star profile versions are the best choice.

Air Jets entrain large volumes of surrounding air through the Jet (similar to air amplifiers) and are more efficient than Air Nozzles because of their larger size. The larger the "air amplification nozzle or jet" the greater the efficiency for flow amplification although larger star profile nozzles can give a higher force/air consumption ratio.

The most important reasons to use Air Amplification Nozzles and Jets apart from energy reduction is safety and reduced noise levels. All Nex Flow™ Air Nozzles and Jets meet OSHA standard CFR 1910.242 (b) for dead end pressure. Noise levels are dramatically reduced up to 10dBA along with lower energy consumption.

The Nex Flow™ Air Mag™ "patent pending" star profile air amplifying nozzle has the best force/air consumption ratio known. Ideal when higher force required in blowoff applications.

Nex Flow™ Nozzles and Jets: Our range of nozzles can address most valid applications for blowoff and cooling.

HOW IT WORKS

Air Mag™ Nozzle Model 47004AMF – Compressed air enters at point (A). Surrounding air (B) is entrained over the specially designed surface profile as the small amount of compressed air exits the specially designed holes drilled in the nozzle and combines at (C) to form a concentrated high velocity, laminar flow stream of amplified air flow and concentrated force with very high ratio of force/cfm.

HOW IT WORKS

Air Nozzle - Models 47001, 47002, 47003, 47003S, 47003S-316L, 47004, 47004S, 47004S-316L, 47009, 47009S, 47009S-316L Compressed air enters at point (A). Surrounding air (B) is entrained over a specially designed profile surface by the action of the small amount of compressed air leaving the ring gap at point (C). This results in a concentrated high velocity, laminar flow stream of amplified air with maximized force.

HOW IT WORKS

X-stream™ Air Nozzle - Model 47010 - Compressed air enters at point (A). Surrounding air (B) is entrained over a specially designed profile surface by the action of the small amount of compressed air leaving the small drilled holes at point (C). This results in a concentrated high velocity, laminar flow stream of amplified air with maximized force.

AIR NOZZLES

PART NO.	DESCRIPTION
47004AMF	Cast Zinc high force/air consumption efficiency Air Mag™ nozzle - ¼" female NPT or BSP
47001	Brass Mini Nozzle with 10/32 fitting or metric equivalent
47002	Brass Mini Nozzle with copper tube - male
47003	Standard Aluminum 1/8" NPT or BPS male fitting
47003S	Standard 303/304 Stainless Steel 1/8" NPT or BPS male fitting
47003S-316L	Standard 316L Stainless Steel 1/8" NPT or BPS male fitting
47004	Extra Strong Aluminum 1/4" NPT or BPS male fitting
47004S	Standard 303/304 Stainless Steel 1/4" NPT or BPS male fitting
47004S-316L	Standard 316L Stainless Steel 1/4" NPT or BPS male fitting
47009	Adjustable Aluminum Nozzle with 1/8" male NPT or BPS fitting
47009S	Standard 303/304 Stainless Steel 1/8" NPT or BPS male fitting
47009S-316L	Standard 316L Stainless Steel 1/8" NPT or BPS male fitting
47010	X-Stream™ Anodized Aluminum Strong Force Nozzle with ¼" female NPT or BPS fitting

THE NEX FLOW™ AIR MAG™ NOZZLES

The “Patent Pending” **NEX FLOW™ AIR MAG™ NOZZLE** is extremely efficient in producing a higher force/unit of air consumption because of its unique design utilizing small diameter air exit holes to concentrate the air flow from the other holes, along with entrained air to produce a high force at the target. This design also extends the distance for laminar flow allowing greater flexibility in use at a distance. It even out performed so-called laval type nozzles and does not have the annoying whistling sound that might occur with such designs.

Model 47004AMF – is the first product of the **The Nex Flow™ Air Mag™** “patent pending” star profile air amplifying nozzle and has the best force/air consumption ratio known. Ideal when higher force required in blowoff applications.

Sound Level 78 dBA at 3 ft. (0,91m) at 80 psig (5.5 bar)

HOW TO PROVE FOR YOURSELF HOW GOOD A NOZZLE IS?

The Nex Flow™ Air Mag™ nozzle is designed so that the force at a particular pressure will be approximately the same as competitive nozzle of star type profile design. To compare and prove the superiority of the Nex Flow™ Air Mag™ nozzle this makes it easy by simply replacing the other nozzle and seeing what happens. To do this, have a pressure regulator and gauge upstream. And if possible a flow meter upstream. Either have a scale to blow against or just apply it your particular application. For each nozzle, adjust the pressure upstream to that it is the same for all nozzles tested. This is what you can expect....

If you replace any competitive nozzle, you will probably have to cut back the pressure as you will get more force from the Nex Flow™ Air Mag™ nozzle. This is because the air consumption is “less” at any given pressure which also means less pressure drop in the line as the air flows out through the nozzle. So you will actually be getting a bit more pressure and force as a result. You can then cut back the pressure if not needed thereby reducing compressed air use even more.

If you have a flow meter, all nozzles can be tested comparatively.

Alternatively, you can just try the various nozzles and you will find the Nex Flow™ Air Mag™ nozzle to perform better simply because there is less pressure drop since it uses less compressed air, indicating its greater efficiency.

When Power is Needed the Air Mag nozzle is at the Leading Edge of All Other Air Nozzle Designs:

- 1.) Thick fins and calculated geometry on the outer body makes the nozzle more safe and sturdy for industrial environments as the air exit holes cannot be blocked by hand(Meets OSHA regulations on dead end pressure)
- 2.) Compact 1 piece design for greater strength specifically designed to withstand industrial environments and mo worker friendly i.e no chance for breaking or exploding like 2 piece designs.
- 3.) Elegant sleek design for a better Coanda effect with engineered surface to provide laminar flow and high velocity with lower air consumption
- 4.) Patented hole design allows for the compressed air to exit with greater efficiency and reduced turbulence allowing the air to reach the target with zero drag.
- 5.) 10-20% more force per unit of air consumption compared with competitors and usable at greater distance due to high concentration of air flow and patented design.
- 6.) Engineered body design reduces the noise level by entraining the surrounding air and producing a lower exhaust noise level.
- 7.) Concentrated flow to reach long distances Workable at greater distances than competitive air nozzles Ideal for cleaning CNC machines where metal chips could bounce back on the face or in breathing in wood working router produced dust if too close.
- 8.) Special outer shape and widely spaced fins allows for easy cleaning and buffed surface minimizes the sticking and collecting of dust an dirt.
- 9.) Precise machined threads, rugged design and the material quality means long life and unlikely to break.
- 10.) Especially ideal for point applications in which a nozzle is required to target a specific part at greater distance yet with a wide enough flow profile and force to equal that of competitive nozzles at a greater distance.

FORCE EFFICIENCY OF THE NEX FLOW™ MODEL 47004AMF AIR MAG™ NOZZLE TO COMPETITIVE VERSIONS

— NEX FLOW™ — EUROPEAN — N. AMERICAN

Note: Data for Force measured at 6". Data measurement was done at a college test laboratory utilizing accurate force and flow measurement equipment. All nozzles tested under the same conditions. Published data was not used - only actual measurements made in the lab.

Note: Data for Force measured at 6"

AIR NOZZLES:

Nex Flow™ Nozzles are designed to fit into small spaces. We have an adjustable Nozzle for some applications and then a few different Nozzles with varying force, depending on the application.

	<p>1.00" (25.4mm) 10-32" THREAD 3/8" (9.5mm) * ALSO AVAILABLE IN 5mm x 0.8 PITCH THREAD</p>	<p>Model 47001 - Is a small brass Nozzle to fit into small spots and used by many machine builders for blowoff applications. Sound level 74 dBA at 3ft (0.91mm) at 80 psig (5.6 bar).</p>
	<p>5 3/4" (127.75mm) b 1/4" (6.3mm) 3/8" (9.5mm)</p>	<p>Model 47002 - Is the small Model 47001 brass Nozzle added to a copper tube. Machine builders can bend the copper tube and aim the nozzles to where ever it suits. The copper tube is simply presfit into the customer's system. Sound level 74 dBA at 3ft (0.91mm) at 80 psig (5.6 bar).</p>
	<p>3/4" A/F (19mm) 1/8" NPT 2-1/8" (54mm) 3/4" (19mm)</p>	<p>Model 47003 (anodized aluminum), 47003S (303/304 stainless steel), 47003S-316L (316L stainless steel) - Is a common standard strength nozzle with a 1/8" male NPT connection and ideal for most blow-off applications involving liquids. It is made of aluminum (or stainless steel) and is partially anodized for longer life. The coanda profile is made for excellent noise reduction and blow-off force at a good distance Sound level 77 dBA at 3ft (0.91mm) at 80 psig (5.6 bar).</p>
	<p>1/8" NPT 1.150" 10.27 10.16 7.37 8.51 4.00 2.90 3.35 3.18 1.25</p>	<p>Model 47003SM-316L - mini nozzle ideal for tight spaces. Comes with a 1/8" male NPT connection with very efficient design and high force level. Sound level 77 dBA at 3ft (0.91mm) at 80 psig (5.6 bar).</p>
	<p>3/4" A/F (19mm) 1/4" NPT 2-1/8" (54mm) 3/4" (19mm)</p>	<p>Model 47004 (anodized aluminum), 47004S (303/304 stainless steel), 47004S-316L (316L stainless steel) - Is another common but stronger force nozzles with a 1/4" male NPT connection and ideal for most blow-off applications involving liquids and even light weight parts. It is made of aluminum (or stainless steel) and is partially anodized for longer life. Again the coanda profile is made for excellent noise reduction and blow-off force at a good distance. Sound level 78 dBA at 3ft (0.91mm) at 80 psig (5.6 bar)</p>
	<p>3/4" A/F (19mm) 1/8" NPT 2-1/8" (54mm) 3/4" (19mm)</p>	<p>Model 47009 (anodized aluminum), 47009S (303/304 stainless steel), 47009S-316L (316L stainless steel) - Is similar to the 47003 except it is made adjustable. The Superior design of the adjustable set screw is made to adjust the nozzles within its weakest and strongest ranges.</p>
	<p>10NOS THRU. HOLES 1-9/16" (15mm) 3/4" (19mm) 1/4" NPT 1/4" (6.3mm)</p>	<p>Model 47010 - Is a unique design by Nex Flow and is extremely powerful. It has a 1/4" female NPT fitting and is fully anodized for long life. With the 'coanda' profile you get an extremely strong force at a distance. This is an ideal Nozzle for blow guns and for blowing small parts for part ejection heavier viscosity liquids. The 47010 is a higher force Nozzle but has less distance for laminar flow than the 47004. Use the Model 47004 is greater distance required from the Nozzle. Sound level 78 dBA at 3ft (0.91mm) at 80 psig (5.6 bar).</p>

*BSP Threads or Adaptors can be supplied depending on country location.

47010	X-Stream™ Anodized Aluminum Strong Force Nozzle with 1/4" female NPT or BPS fitting

STAINLESS STEEL RIGID FLEX HOSE (REFER TO PAGE E9 FOR THE RIGID FLEX HOSE)

PART NO.	DESCRIPTION
6RF (MM / MF)	6" Stainless Steel Rigid Hose which can be flexed to a shape
12RF (MM / MF)	12" Stainless Steel Rigid Hose which can be flexed to a shape
18RF (MM / MF)	18" Stainless Steel Rigid Hose which can be flexed to a shape

AIR JETS:

Air Jets are larger than Nozzles and used when a wider area needs to be hit with the amplified air. They are significantly more efficient than Nozzles although often use as much compressed air. Their best use is to replace pairs of Nozzles that are used for part ejection or for blowoff applications that require greater force than that provided by Air Knives or Air Movers. Nozzles are for point use while air jets can fan out somewhat for better continuous blowoff when a row of them are made. Nex Flow™ Jets are all made adjustable with a lock ring to assure the security of any gap setting. They have a female 1/8" NPT and made lightweight with anodized aluminum.

6 models are available: From left to right is Model 45001 High Flow Air Jet, Model 45002 High Force Air Jet and Model 45003 Mini Air Jet all in anodized aluminum, the Model 45002B High Force Air Jet in brass and the Model 45002S High Force Air Jet in 316L Stainless Steel and the Model 45004 High Force Fat Air Jet Amplifier in anodized aluminum.

The **Mini Air Jet Model 45003** is ideal for small spots where a Nozzle may not be adequate for wider coverage of air flow. It is most compact air jet available with high force and adjustability. Sound level is 82 dBA at 3ft (0.91m) at 80 psig (5.6 bar).

Model 45001 / 45002 / 45002B / 45002S - High Flow Air Jet are physically the same size. The only difference is a larger exit opening for the amplified air flow. The high flow system is used more for cooling and light blowoff while the high force version is used mainly for heavier blowoff applications.

The Sound level for Model 45001 is 80 dBA and for the Model 45002/ 45002B / 45002S it is 82 dBA at 3ft (0.91m) at 80 psig (5.6 bar).

The 45002B Brass Air Jet and the 45002S 316L Stainless Steel Air jet are marked to indicate the size of the air gap and can be easily set and locked into place.

*BSP Thread or adaptors can be supplied depending on country location.

Air Jets perform similar to Adjustable Air Amplifiers - with the same lock ring and methodology.

Nex Flow™ Air Jets are adjustable and come with a lock ring to fix the gap.

HOW IT WORKS

Model 45001, 45002, 45002B, 45002S, 45003 and 45004

Air Jets use a small amount of compressed air entering the annular chamber and exit via small ring nozzle at high speed over a "coanda" profile. This creates a vacuum entraining outside air converting the pressure to a high flow output while maintaining a high blowoff force. Energy cost and noise levels are reduced as a result.

The **LARGE FAT Air Jet Air Amplifier** is the largest fat jet/smallest air amplifier with the same design as the high performance air jets to give you the most optimal performance with an adjustable gap and lock ring to set the gap in place.

WHAT THEY ARE – REASONS TO USE

Nex Flow™ FAT Air Jet Air Amplifier is made of anodized aluminum and with a fine thread for a fine and accurate adjustment of the air gap to the setting desired for any particular application.

The **Nex Flow™ FAT Air Jet Air Amplifier** is a transition size in between an air jet and the larger air amplifiers. It provides for superior air flow amplification and high force for blow off and cooling applications.

RIGID FLEX HOSE NOZZLE ACCESSORIES - TO HOLD AND AIM NOZZLES AND JETS

The unique Nex Flow™ RIGID FLEX hose is an all stainless steel hose that does not break after a few bends like competitive rubber hoses with simple copper inserts. It is resistant to creep and crimping. Its all stainless construction allows it use in any difficult environment. They have 1/4" male NPT welded end connections and come in 6", 12" and 18" overall lengths.

RIGID FLEX HOSE NOZZLE ACCESSORIES - TO HOLD AND AIM NOZZLES AND JETS

The unique Nex Flow™ RIGID FLEX hose is an all stainless steel hose that does not break after a few bends like competitive rubber hoses with simple copper inserts. It is resistant to creep and crimping. Its all stainless construction allows it use in any difficult environment. They have ¼" male NPT welded end connections and come in 6", 12" and 18" overall lengths.

AIR JETS	
PART NO.	DESCRIPTION
45001	High Flow Air Jet (aluminum, unmarked)
45002	High Force Air Jet (aluminum, unmarked)
45002B	High Force Air Jet (Brass, marked to indicate gap setting)
45002S	High Force Air Jet (316L stainless, marked to indicate gap setting)
45003	Mini - High Force Air jet
45004	Fat Air Jet Air Amplifier (aluminum, unmarked)

STAINLESS STEEL RIGID FLEX HOSE	
PART NO.	DESCRIPTION
6RF (MM / MF)	6" Stainless Steel Rigid Hose which can be flexed to a shape
12RF (MM / MF)	12" Stainless Steel Rigid Hose which can be flexed to a shape
18RF (MM / MF)	18" Stainless Steel Rigid Hose which can be flexed to a shape

AIR EDGER™ FLAT JET NOZZLE

Superior designed Flat Jet Nozzle reduces compressed air consumption and noise levels

– with the use of different shims can vary the force from weak to strong depending on the application

WHAT ARE THEY - REASONS TO USE

Model **47011** (cast zinc) **Air Edger™ Flat Jet** and Model **47011S-316L** (316L stainless steel) is an extremely efficient flat jet air nozzle designed to provide a powerful stream of high velocity laminar flow and high force for blow off and cooling where air knives may not be enough

When bench tested against several other flat jets, even those with special designed holes or shims, the **Air Edger™ Flat** jet outperformed them all despite whatever claims others may make. Air consumption and noise levels are minimized with its special design and configuration.

NOISE LEVELS (dBA) :

47011-4	75	dBA
47011-8	76	dBA
47011-12	77	dBA
47011-16	78	dBA
47011-20	80	dBA
47011-24	82	dBA
47011-28	83	dBA

The **Nex Flow™ Air Edger™ Flat Jet** is available with various size “gaps” all set by a flat shim. Three standard shim sizes are available - .004” (.10 mm), .008” (.2mm) and .020” (.51 mm). One, two or more shims can be “stacked” for a larger gap and greater force.

HOW IT WORKS

Compressed air enters the flat jet at the rear port at (A). Air is entrained at point (B) and (D) by the compressed air stream that leaves the flat jet from a small gap at the end. The entrained air follows the profile that directs the airflow in a perfect straight line to create a uniform sheet of air along the 2” length of the Air Edger™ Flat Jet Nozzle. The amplified air stream maximizes velocity and force to produce a well-defined sharp edge laminar flow with minimal wind shear for reduced energy use in blow off and cooling. Two screws at (C) allow you to vary the gap with a variety of sizes of shims (.004”, .008” or .020”). One or two shims may be used.

Air Edger™ Flat Jet with .008” gap setting blows water from under the caps on a bottling line moving at high speed

Air Edger™ Flat Jet with .020” gap setting provides a powerful force to blow off dirt and debris in an extrusion line

PERFORMANCE

AIR CONSUMPTION AND FORCE

MODEL Cast Aluminum	MODEL 316L Stainless	SCFM (SLPM) at 80 PSIG Measured at entrance to jet	FORCE in Ounces (grams) at 12" from target
Model 47011-4	Model 47011S-316L-4	20.5 (581)	12 (340)
Model 47011-8	Model 47011S-316L-8	31.3(887)	21 (595)
Model 47011-12	Model 47011S-316L-12	38.5 (1091)	27 (765)
Model 47011-16	Model 47011S-316L-16	41.0 (1161)	30 (850)
Model 47011-20	Model 47011S-316L-20	44.5 (1261)	33 (936)
Model 47011-24	Model 47011S-316L-24	47.0 (1331)	36(1020)
Model 47011-28	Model 47011S-316L-28	51.0 (1445)	39 (1106)

The Air Edger™ Flat Jet Nozzle air gap is set by one or more shims. There are three basic shim sizes - .004" (.1 mm), .008" (.2 mm) and .020" (.5 mm). Shims may be stacked for larger gaps and for sizes in between the shim standard sizes offered. Shims available in both 304 stainless steel & 316L stainless (for the stainless Air Edger™). The greater the gap the more powerful the force.

DIMENSIONS

COMPARED TO COMPETITION

It is not always clear how tests and measurements are made by competitors and therefore validating claims can be difficult since such values depend on how tests are done. Therefore we measured a competitive unit under the same conditions as we measured our units. The flat jet of the competitor is of a similar type except that they are using a saw tooth shim design and different internal dimensions. We obtained the following readings when measured using the same parameters as for Nex Flow units.

25.1 SCFM AIR CONSUMPTION AND 15 oz force
(Published figures were 22 SCFM and 22 oz force)

One measure of efficiency is the ratio of Force/Air Consumption. The higher the ratio the better the efficiency. The force/SCFM is a ratio of .54 based on measured figures when measured the same way as the Nex Flow units.

If we compare to that of the Nex Flow Model 47011-4 the ratio is $12/20.5 = .58$ And for the Model 47011-8 the ratio is $21/31.3$

$= .67$ In both cases the efficiency of the Nex Flow units are higher in the comparative tests done under the same conditions.

FLAT JET NOZZLES

PART NO.	DESCRIPTION
47011-4 & 47011S-316L-4	Air Edger™ Flat Jet with .004" gap setting
47011-8 & 47011S-316L-8	Air Edger™ Flat Jet with .008" gap setting
47011-12 & 47011S-316L-12	Air Edger™ Flat Jet with .012" gap setting
47011-16 & 47011S-316L-16	Air Edger™ Flat Jet with .016" gap setting
47011-20 & 47011S-316L-20	Air Edger™ Flat Jet with .020" gap setting
47011-24 & 47011S-316L-24	Air Edger™ Flat Jet with .024" gap setting
47011-28 & 47011S-316L-28	Air Edger™ Flat Jet with .028" gap setting
47111S-4	.004" 304 stainless steel shim
47111S-8	.008" 304 stainless steel shim
47111S-20	.020" 304 stainless steel shim
47211S	304 stainless steel shim set – Two (2) .004", Two (2) .008" and One (1) .020" shim
47111S-316L-4	.004" 316L stainless steel shim
47111S-316L-8	.008" 316L stainless steel shim
47111S-316L-20	.020" 316L stainless steel shim
47211S-316L	316L stainless steel shim set – Two (2) .004", Two (2) .008" and One (1) .020" shim

NOT SURE OF THE SIZE YOU NEED?

If you are not sure of which level of power you need, we recommend a Model 47211S Shim Set (for the cast zinc model) or a Model 47211S-316L Shim Set (for the 316L stainless steel model). The shim set consists of 2 - .004" shims, 2 - .008" shims and 1 - .020" shim and any two shims (or more) can be stacked to set the gap best suited to your application.

RIGID FLEX HOSE NOZZLE ACCESSORIES - TO HOLD AND AIM NOZZLES AND JETS

The unique Nex Flow™ RIGID FLEX hose is an all stainless steel hose that does not break after a few bends like competitive rubber hoses with simple copper inserts. It is resistant to creep and crimping. Its all stainless construction allows it use in any difficult environment. They have ¼" male NPT welded end connections and come in 6", 12" and 18" overall lengths.

STAINLESS STEEL RIGID FLEX HOSE (REFER TO PAGE M5 FOR THE RIGID FLEX HOSE)

PART NO.	DESCRIPTION
6RF (MM / MF)	6" Stainless Steel Rigid Hose which can be flexed to a shape
12RF (MM / MF)	12" Stainless Steel Rigid Hose which can be flexed to a shape
18RF (MM / MF)	18" Stainless Steel Rigid Hose which can be flexed to a shape

SAFETY AIR BLOW OFF GUNS

Nex Flow™ Blow off Guns utilized the efficient and superior Nozzles and Jets to reduce compressed air consumption and noise levels with safety in mind.

WHAT ARE THEY - REASONS TO USE

Many low cost air guns are sold extensively throughout the world but do not necessarily last. In addition they are not all safe to use and may result in dangerous high dead end pressures.

Nex Flow™ Safety Air Guns are durable, safe and comfortable to use incorporating our efficient air nozzles and air jets to produce high output air and "laminar" flow while minimizing compressed air use and noise levels.

The most important reason to use Nex Flow™ Safety Guns is safety. All Nex Flow™ air nozzles and air jets meet OSHA standard CFR 1910.242(b) for dead end pressure. Noise levels are dramatically lower with air nozzles and air jets in addition to lower energy use.

There are four types of Safety Air Guns to choose from depending on an individual's personal taste and comfort. A Standard and a Light version (two different types) of the Easy Grip Safety Air Gun, that operate with a trigger, the Hand comfort gun, which operates with a button action, and the X-Stream Heavy Duty Safety Air Gun for those applications where strong force is needed.

See air nozzles and air jets for their technical details.

All air amplifying nozzles used with Nex Flow™ Safety Air Guns produce up to 25 times the compressed air consumed. Noise reduction up to 10 dBA is typical as well as reduced air consumption when compared to open jets and tubes. All Nex Flow Safety Air Guns with Nex Flow Nozzles meet OSHA standard CFR 1910.242(b) for dead end pressure.

SELECTION

The standard Easy Grip Air Gun is made of aluminum and is the most flexible for use. A full range of air nozzles and air jets may be fitted to these air guns with the option of adding extensions of various lengths, and even swivels to add at the tip of the gun or extension to direct the air nozzle into hard to get areas. Virtually any of the 1/4" male or female air nozzles may be attached to the system as well as the Air Edger Flat Jet and small air knives and air jets.

The Easy Grip Light Air Gun is made of string plastic and utilizes the Nex Flow 6 mm Model 47002AMS Air Mag Nozzle. Lightweight and comfortable to use, the small nozzle allows for small targeted blow off applications. Contoured body fits comfortably in the operators hand and made to protect the palm of the hand against the connection fittings • Curved tip 5" long • 1/4" (F) – 18 NPT Air Inlet

Nex Flow™ "Heavy Duty" Safety Air Gun with 1/2" air nozzle connected to the 1/2" air gun outlet, in either cast zinc or stainless steel is extremely powerful but safe, for those applications where traditional air guns are just not enough in rugged industrial environments. Ergonomic design for comfortable handling this product comes complete with the powerful patented Nex Flow Model 47006AMF cast zinc 1/2" air nozzle or the Model 47006AMFS air nozzle.

Most heavy duty guns are only up to 3/8" outlets and cannot compare to the power of the Nex Flow X-Stream Heavy Duty Safety Air Gun. Powerful flows and force are produced with this comfortable ergonomic design, and durable cast zinc body with composite rubber grip and tailored handle to provide optimal grip. The force provided is 5 to 7 times more than traditional air guns. Aluminum extensions are available to be added to these units to reach into hard to get areas.

The Hand Comfort Button Gun is designed for blow off applications in a nice compact package where a push button is preferred to a trigger operation. The Hand Comfort Button Gun is aluminum but may be fitted with aluminum or stainless steel air nozzles. Three nozzles are the options available:

- The Model 47003 aluminum air nozzle
- The Model 47003S stainless steel air nozzle
- The Model 47003S-316L stainless steel air nozzle

If a very small nozzle is required the Model 47002AMS – 6 mm stainless steel Air Mag™ Nozzle may also be fitted to the unit.

DIMENSIONS

SMART N CLEVER™
MORE THEN INTELLIGENT

EXTENSION TUBE AND RIGID FLEX HOSE FOR EASY GRIP SAFETY GUN

You can add an anodized aluminum Extension Tube or a Rigid Flex Hose to the Easy Grip Gun for extended reach. Tubes are available in 6", 12", 18", 24" and 36" lengths. The Rigid Flex Hose is available in 6" and 12" lengths. You can add 1/4" swivel to the end of the extension to direct the nozzle into difficult spots.

EXTENSION TUBE FOR X-STREAM HEAVY DUTY AIR GUN

Extensions for the Heavy Duty Safety Air Gun are a rugged finished aluminum pieces. On larger extensions have a secure rubber grip to make it easier to use. A separate hex connector is used to attach the extension to the air gun. A 1/2" swivel may be attached at the end of the extension to help direct the nozzle to hard to reach areas.

Hand Comfort button Gun is Used for blowing off metal chips during a drilling operation.

EASY GRIP SAFETY AIR GUN

PART NO.	DESCRIPTION
49004	Air Gun with 47004 nozzle
49004S	Air Gun with 47004S nozzle

49109	Air Gun with 47009 Adjustable Nozzle
49109S	Air Gun with 47009S Adjustable Nozzle
49109S-316L	Air Gun with 47009S-316L Adjustable Nozzle
49110	Air Gun with 47010 X-stream Nozzle

STATIC ELIMINATORS

**Powerful and high quality static eliminators with, and without air amplification products,
To address virtually any application which static charges are a problem.**

WHAT ARE THEY - REASONS TO USE

Wild claims are made by some amplification product suppliers that putting a static bar with an Air Knife will eliminate static at incredible distances which are highly exaggerated. We will attempt to clarify such myths with reality.

A static eliminator is a device that produces ions - positive and negative - which neutralize any opposite charge on a surface that these ions interact with. Static charges occur on plastic parts, moving webs of paper and film, and can cause problems of jamming as well as shock hazards to personnel.

Charges can vary on a surface and in some cases (depending on a variety of factors such as material, speed, and humidity) be extremely high. For this reason Nex Flow™ has several options to address the wide variety of environments encountered.

Nex Flow™ has a variety of static elimination products to address virtually any static application in manufacturing

MYTH VERSES REALITY

Static Eliminators are used on their own when they can be placed close to a surface. In all instances it takes “time” for the static to dissipate. When close to a surface it can happen extremely quickly (milliseconds). This can usually be achieved by using a standard strength static bar. In some cases the surface charge may be extremely high (like in some materials as Mylar) and/or the surface may be moving quite quickly on a moving web. In such cases the static bar may not produce enough “ions” fast enough and a more powerful static bar is required. Just adding an Air Knife will NOT speed up static removal. In fact it may slow it down! Nex Flow™ has available a more powerful static bar for such high charged” or high speed applications.

Adding a compressed air “Air Knife” will allow you to remove static at a distance (as will adding a blower) but can increase the time needed to dissipate static as the ions somewhat recombine on their way to the target weakening their effect. Therefore often a stronger static bar (that we can provide) is required.

All static control equipment meets electrical standards for North America and/or Europe and are ROHS compliant.

Nex Flow™ uses quality static bars from Haug rather than cheap products because Haug static bars have been proven to last in difficult environments. The most fragile part of any ionization system is the static bar and Haug bars have proven themselves against many others to be durable, of high quality, and long lasting.

THE MODEL RN STATIC BAR

The HAUG **RN** Ionizing Bar is a powerful and rugged piece of equipment. Production interfering surface charges can be removed reliably and effectively - even at high operating speeds. The coaxial high-voltage plug-and-socket connection of the HAUG system **X-2000** offers a unique advantage in that the gas tight high-voltage plug can be connected to the HAUG power pack easily and without tools. The flexible, coaxially shielded cable connects the ionizing unit with the voltage supply. The round construction of the RN ionizing bar permits the exact axial adjustment in the direction of travel of the material. The Ionizing Bar is safe to touch. Special wear-resistant electrodes guarantee long service life.

MODEL RN Static Bar

MODEL VS Static Bar

THE MODEL VS EXTRA POWERFUL STATIC BAR

The HAUG **VS** Ionizing Bar reliably removes electrostatic charges and its performance, when compared to the standard version, is three times the power. This tremendously improves the static removal and designed to address extremely high charges, faster speeds and greater distances. The **VS** Ionizing Bar has all of the typical features that characterize HAUG Ionizing Bars: the reliable and removable plug-and-socket connection System **X-2000**, the shielded high-voltage cable, the special stainless-steel electrodes and the convenience of being safe to touch. The electrical capacity of the VS Ionizing Bar is three times as great as the standard version, and therefore, it is necessary to base any power pack load calculations on a bar length three times as long.

EXPLOSION PROOF STATIC BARS AND POWER SUPPLIES

The Haug **El Ex T** ionizing units are approved for equipment in areas with potential explosive atmospheres, to eliminate unwanted electrostatic charges where hazardous gases may form, such as paint facilities or printing machines utilizing solvent inks.

The design of the **El Ex T** Ionizing Bar complies with the international ATEX directives in combination with the Model EN 92 or Multistat Ex power supplies. This system is approved for use in manufacturing locations with potentially explosive atmospheres resulting from gases of explosion group IIA, temperature classes T4 to T6.

Nex Flow™ uses quality Power Supplies from Haug that have several unique features unavailable in competitive units.

Haug Power Supplies are:

1. **Repairable** - parts are replaceable
2. **Several versions** - units available with four outlets, two outlets, with or without function monitoring, and in 220V and 110V versions
3. **Patent Safety X-2000 Connection** - prevents accidental shocks when connecting or disconnecting a static eliminator to the power supply
4. **High Reliability and Life** - so reliable that we even offer a two year warranty on the power supplies

High Voltage Power Pack Transformers EN - C (2 outlet) and EN-C4 (4 outlet)

Static Control Power Supply EN-C type High Voltage Power Pack. The integrated high-voltage transformer converts applied mains voltage to approx. 7,000 to 8,000 volts. The unit is equipped with two or four high-voltage terminals and integrated on - off pilot lamp.

Transformers are equipped with a modular-type high-voltage transformer. It consists of three main modules, all of which can be replaced individually. This unit is electrically approved for North American installations.

S-Line power pack EN SL

The **S-Line power pack** comes with two high-voltage connections and meets both North American and European standards. The integrated high-voltage transformer converts applied mains voltage to approx. 7,000 to 8,000 volts. Integrated on - off pilot lamp.

S-Line power pack EN SL LC - Same as the SL, but with integrated full-electronic function monitoring to constantly monitor all functions of the ionizing system. It alerts the operator of any irregularities by causing the LED indicator integrated in the housing to flash

EN SL RLC - Identical in all technical aspects to the EN SL LC plus a signal socket above the earthing sleeve. A fault message can be connected to the signal socket.

MULTISTAT POWER SUPPLY

EN - 92 EX POWER SUPPLY

Power pack EN 92 Ex is suitable for direct use in areas with potentially explosive atmospheres (zones 1 or 2).

The units comply with the International ATEX directives. All high-voltage components are accommodated in a flameproof housing. The power pack **EN 92 Ex** is equipped with two high-voltage ports for the connection of the ionizing units. No long high-voltage cables are required, as the power pack can be installed in the immediate vicinity of the ionizing unit.

POWER SUPPLIES

North American Approved	
PART NO.	DESCRIPTION
80111	Haug Model ENC-2, 110V, 2-outlet power supply
80112	Haug Model ENC 4, 110V, 4-outlet power supply
80121	Haug Model ENC-2, 220V, 2-outlet power supply
80122	Haug Model ENC 4, 220V, 4-outlet power supply

Multistat Power Supply

The **Multistat** power pack provides the optimum in power pack performance and monitoring. The **Multistat EX** is approved for explosion proof applications (but must be mounted outside the explosion proof area).

Special features and advantages

- ▶ Self-balancing high-voltage; no adjustment or settings on the Multistat are required
- ▶ Indication of the output high-voltage by means of an analogue indicating instrument
- ▶ Fault indication in case of insufficient output voltage by means of an optical signal (light-emitting diode - LED) and a floating change-over contact
- ▶ Fault indication in case of insufficient mains voltage by means of a floating change-over contact
- ▶ The floating change-over contact allow both status check and an error check to be performed
- ▶ The **Multistat** allows the integration of the fault signals into a quality assurance system
- ▶ The high-voltage plug-and-socket connector system **X- 2000** ensures a secure connection.
- ▶ Four high-voltage terminals

Function Monitoring

For an ionization system to work efficiently, a voltage of at least 4.2 kV (Corona inception voltage) is required. By monitoring the electronic control of the output voltage, the high-voltage is continuously monitored; any drop below the corona inception voltage is signaled as malfunction. This fault signal may be linked with the machine control system or the production monitoring system using the socket connection integrated into the housing and a signaling cable.

North American and European Approved

SILENT X-STREAM™ AIR BLADE™ IONIZER

Powerful and quiet static eliminator rapidly dissipates static charge and removes dust.

The Silent X-Stream™ Air-Blade™ Air Knife utilizes the quality Haug static bars - the RN bar for most applications or the extra strong VS bars (Triple X versions) for very high static charges and extremely high speeds. The Silent X-Stream™ Air-Blade™ Air Knife uses a small amount of compressed air for a powerful, and adjustable force with "laminar" flow to eliminate charges in applications where static bars cannot reach or where high speeds are a factor, and to clean the surface.

Normally the Standard Model RN Haug brand static bar can address most applications. For extremely high speeds and high charges the extra powerful VS model is used. For wash down applications (such as pharmaceutical areas), a washable model is available at extra cost. **(Contact factory for information)**

All Haug static bars come with a patented safety connector and fully shielded cable. The power supplies are "repairable" and are so well made, that we offer a two year warranty on them (one year on the bars).

SILENT X-STREAM™ AIR-BLADE™ IONIZER FEATURES:

- ▶ Connections on the back or ends
- ▶ It flows from end to end (full flow).
- ▶ Stainless steel models are available for high temperature and corrosive environments.
- ▶ Models are designed for easy cleaning and prevention of dirt entering the static bar, minimizing potential damage.
- ▶ Patented connectors with the ground intrinsic to the cable design.
- ▶ Instant ON/OFF with no moving parts.
- ▶ Repairable Power Supply with a two year warranty.

SILENT X-STREAM™ AIR-BLADE™ IONIZER BENEFITS:

- ▶ Flexible mounting options.
- ▶ Units can be mounted end to end for longer lengths with no air gap.
- ▶ High temperature, extra strength, and even a unique washable stainless steel model is available for special applications or as required.
- ▶ Ease of cleaning and maintenance.
- ▶ No separate ground connection that can be cut and cause sparks or accidentally shock personnel
- ▶ Conserves air use when not required.
- ▶ Eliminates one costly area which is power supply replacement. 2 year warranty on power supplies.

A model 15030X X-Stream™ Air Blade™ Ionizer neutralizes and cleans the surface of plate glass prior to laminating with plastic sheet.

Two Model 13030 RN static bars neutralize the plastic laminate preventing dust attraction. All three items are connected to one Model EN C-4 -4- outlet power supply.

PERFORMANCE AND RELIABILITY

The standard RN static bar is very effective when mounted close to a surface (within an inch) at speeds up to 800 feet per minute and the strong VS bar can work to speeds up to 2000 feet per minute mounted as close or at slower speeds up to 8 inches away. For greater distances and high speeds the addition of air is required. The laminar flow from an Air Blade™ Air Knife will extend the effectiveness over this extra distance. Even with laminar flow the ions will recombine and slow static dissipation slightly. For very highly charged surfaces and very high speeds, the extra strong VS static bar may be required. Apart from distance, the Air Blade™ Air Knife allows enough force for blow-off of dust and dirt with little required. Blowers can actually be more effective in static removal closer to the surface but the Air Blade™ Ionizer is more effective when further away (see chart comparing blowers and Air Blade™ Ionizers above). This is why we recommend stronger static bars like our VS static bar for blowers when far from the target. Blowers however do not offer adequate blow-off force to clean unless they have very high flow and high static pressure. But when not close to the target, blower systems will still require a stronger static bar to match the rate of dissipation that an Air Blade™ Ionizer can offer. The X-Stream™ Air Blade™ Ionizer can work well for dust and dirt blow-off within the range of 20 to 40 PSIG (1.4 to 2.8 Bar) line pressure.

ANODIZED ALUMINIUM SILENT X-STREAM™ AIR BLADE™ AIR KNIFE WITH IONIZING BAR & BRACKET

A Model 16118X removes static from extruded rubber web on a rewind. Previously the static charge was so high that any spark would cause the rubber to burn which regularly happens the 'extra strong' VS Bar combined with the X-stream™ Air Blade™ eliminated this unsafe situation.

STANDARD AIR BLADE™ IONIZER

A Low Cost but powerful static eliminator that rapidly removes static charge and cleans

The Standard Air Blade™ Ionizer combines the superior designed Standard Air Blade™ Air Knife the quality Haug static bars - the RN bar for most applications or the extra strong VS bars (Triple X versions) for very high static charges and extremely high speeds. The standard Air-Blade™ Air Knife uses slightly more compressed air than the Silent X-Stream™ Air Blade™ and has a higher sound level but still produces a powerful, and adjustable force with "laminar" flow to eliminate charges in applications where static bars cannot reach or where high speeds are a factor.

Normally the Standard Model RN Haug brand static bar can address most applications. For extremely high speeds and high charges the extra powerful VS model is used. For wash down applications (such as pharmaceutical areas), a washable model is available at extra cost. **(Contact factory for information)**

All Haug static bars come with a patented safety connector and fully shielded cable. The power supplies are "repairable" and are so well made, that we offer a two year warranty on them (one year on the bars).

STANDARD AIR BLADE™ IONIZER FEATURES:

- ▶ Connections on the back or ends.
- ▶ It flows from end to end (full flow).
- ▶ Stainless steel models are available for high temperature and corrosive models.
- ▶ Models are designed for easy cleaning and prevention of dirt entering the static bar, minimizing potential damage.
- ▶ Patented connectors with the ground intrinsic to the cable design.
- ▶ Instant ON/OFF with no moving parts.
- ▶ Repairable Power Supply with a two year warranty.

STANDARD AIR BLADE™ IONIZER BENEFITS:

- ▶ Flexible mounting options.
- ▶ Units can be mounted end to end for longer lengths with no air gap.
- ▶ High temperature, extra strength, and even a unique washable stainless steel model is available for special applications or as required.
- ▶ Ease of cleaning and maintenance.
- ▶ No separate ground connection that can be cut and cause sparks or accidentally shock personnel.
- ▶ Conserves air use when not required.
- ▶ Eliminates one costly area which is power supply replacement. 2 year warranty on.

Three Model 15012 Standard Air Blade™ ionizer with 'extra strong' model VS static bar is used to remove the static charge from containers moving at high speed prior to filling. The ionized air is blown in to the container to remove the static charge. All the static bars will connect with 4 outlet power supply. The VS Bars have to be used because of the high speed of container.

Qualitative Chart Comparing Ion Blowers and Air Blade™ Ionizer
Dissipation of static charge with distance.

PERFORMANCE AND RELIABILITY

The standard RN static bar is very effective when mounted close to a surface (within an inch) at speeds up to 800 feet per minute and the strong VS bar can work to speeds up to 2000 feet per minute mounted as close or at slower speeds up to 8 inches away. For greater distances and high speeds the addition of air is required. The laminar flow from an Air Blade™ Air Knife will extend the effectiveness over this extra distance. Even with laminar flow the ions will recombine and slow static dissipation slightly. For very highly charged surfaces and very high speeds, the extra strong VS static bar may be required. Apart from distance, the Air Blade™ Air Knife allows enough force for blowoff of dust and dirt with little required. Blowers can actually be more effective in static removal closer to the surface but the Air Blade™ Ionizer is more effective when further away (see chart comparing blowers and Air Blade™ Ionizers above). This is why we recommend stronger static bars like our VS static bar for blowers when far from the target. Blowers however do not offer adequate blowoff force to clean unless they have very high flow and high static pressure. But when not close to the target, blower systems will still require a stronger static bar to match the rate of dissipation that an Air Blade™ Ionizer can offer. The Standard Air Blade™ Ionizer can work well for dust and dirt blowoff within the range of 20 to 40 PSIG (1.4 to 2.8 Bar) line pressure.

A Model 15112X X-Stream™ Air Blade™ Ionizer is used to neutralize & clean surface dust of a circuit board. The ionizing bar is well designed and closely "balanced" in positive & negative ions produced meaning a close to zero residual charge after use unlike many competitive product.

ION BLASTER BEAM™ - Quiet, Super Efficient, Concentrated flow of ionized air to eliminate static charge and remove dust!

ION BLASTER BEAM™ APPLICATIONS

- Eliminate static charge and cleaning parts
- Neutralize shrink wrap
- Form fill and seal applications for bag opening
- Neutralizing and cleaning the inside of blow molded parts
- Eliminate static and cleaning of plastic assemblies
- Dust removal from parts prior to painting
- Remove static charge in slitting applications
- Cleaning of packaging
- Neutralization of static charge inside containers

WHAT ARE THEY - REASONS TO USE

The *Nex Flow™* Ion Blaster Beam™ neutralizes static electricity and can remove static free dust up to 15 feet (4.6 m) away with no moving parts. It's compact design allows it to be used in hard to reach areas or confined spaces. The air volume and velocity are infinitely adjustable over a wide range using a pressure regulator to address any application from light to heavy duty. The use of an "air amplifier" (Model AM40) maximizes ionized airflow with large volume entrained while minimizing the use of compressed air. (See Air Amplifiers elsewhere in the catalog). In most applications only 10 psig (0.7 bar) is required to operate effectively. The Ionizing Point is a powerful ionizer which remains effective because the air exit "plastic PET head" of the unit prevents weakening if ions which metal attachments may do. This can make the Ion Blaster Beam™ far more effective than systems using metal

ION BLASTER BEAM™ FEATURES

- Effective Static Elimination
- Can clean static free dust at a distance
- Compact Design to fit in small spaces
- Stand is pre-drilled for easy mounting

ION BLASTER BEAM™ BENEFITS

- Low compressed air use
- Rapid static decay
- Quiet Operation
- Shockless and non-radioactive
- Compact and rugged design
- Intake may be ducted to bring in atmospheric air from another area
- no moving parts and minimal maintenance
- Variable flow and force

DIMENSIONS

HOW IT WORKS

Compressed air is supplied at (A) where it enters the air amplifier section of the Ion Blaster Beam and follows the Coanda profile inside the amplifier. Ambient air is entrained at (B) into the amplifier. The Ionizing Point (C) ionizes the amplified airflow exiting as a powerful high flow of static removing, ionized air (D). Unit is mounted on a stand (E) for convenient installation.

ION AIR BLASTER BEAM™ SPECIFICATIONS

Certification: North American Power Supplies certified to UL and CSA standards and Spot Ionizer used with the Ion Blaster beam is included with the certification. European Power Supplies CE approved and Spot Ionizer used with the Ion Blaster Beam is included with the certification. Stainless steel emitters on the ionizer.

Electrical: For use with 7 kV rms, 5 milliamperes (max) power supply which will last much longer than 5 kv power supplies.

Electrical Hazard: Shockless (less or equal to 5mA)

Maximum Ambient Temperature: 122 degrees F or 50 degrees C.

THE LG LIGHT-WEIGHT ERGONOMETRIC DESIGNED IONIZING AIR GUN IS EFFICIENT AND REPAIRABLE

THE LG "LIGHT-WEIGHT GUN" IONIZING AIR GUN

The LG ionizing Air Gun is light weight at only 16 oz (480 gm) (before air hose and high voltage cable) and easy to handle. If damaged it is easily repairable by replacing one of only seven parts.

Ionizing Air Gun Function

The head of the device is enclosed by a sheet material shield, which serves both as mechanical protection and counter-electrode. Due to the special shape of this shield, bypass channels are created, which assist an efficient six-channel blowing nozzle by stabilizing the airflow. The airflow can be adjusted exactly in accordance to the application - particularly useful for the treatment of small pieces.

Ionizing Air Gun Special Features and Advantages

- **Operating facility** : The LG Gun consists of few individual modules, each of which is exchangeable. The high-voltage cable can be extended, shortened or exchanged.
- **Ergonomic** : Modern industrial design well thought-out down to the last detail. This device can be used conveniently and efficiently by left and right handed persons.
- **Efficient Air Amplification** : The utilization of the intake air through bypass channels
- **Lightweight and quiet** : The LG creates remarkably little noise and its low weight makes it easy to handle.

SPECIAL NOTES:

The LG Gun as all Haug products, all come with a patented connector to assure safety in operation and maintenance. Field repairable, it prevents a connection if the static gun is removed or attached while power is still on at the power supply. Lightweight and highly flexible cable is FULLY SHIELDED for longer life.

REPAIRABLE POWER SUPPLIES

Power supplies are repairable and come with a 2 year warranty.

OPERATION

Entrained air utilizes amplified air flow for reduced energy use. The Ionizing pins are not in the direct path of the airflow minimizing dirt buildup and preventing premature failure that can occur with pins directly in the path of the air flow.

PART NO.	DESCRIPTION
18001	LG IONIZING GUN ONLY c/w 15 feet of cable
18101	LG IONIZING GUN c/w 15 feet of cable Plus ENC-2 Power Supply (2 outlet)

Why use air amplification products with static control?

Static control involves the use of static elimination devices (ionizers) to eliminate the static charge on a charged surface. There are several different types of static elimination systems but the ones used most often in industry, and used with Nex Flow™ air amplification products are AC ionizers.

What happens with an AC ionizer is that on every AC current cycle the air around the ionizer is “ionized” – first with a negative charge and then a positive charge. So you create an ion cloud of positive and negative ions. With these types of static elimination bars, you generally have to be quite close to the bar to eliminate the static on the charged surface. If the surface charge is negative, the positive ions eliminate the negative charge and if the surface charge is positive, the negative ions neutralize the charge. The other ions are repelled back into the atmosphere.

Ionizers are used on their own extensively in the industry but most of the applications through Nex Flow™ are in combination with either an air knife or air amplifier for cleaning and/or for static removal at a distance. Nex Flow™ only utilizes static bars that are well made and have power supplies with adequate voltage for long life. Here is what to look for in a static elimination system:

1. Strong static bars and “pins” – when choosing an ionizer the static bar should be rugged enough for a factory environment. There is an entire technology based on static “pin” design as the pins produce the “ions”. If the pin is easily bent or damaged, it signals a possible short ionizer life (and cost).
2. 7 KV or higher Power Supply – all ionizers require a high voltage power supply to operate. It has been well documented for some time that a power supply 7 KV or higher is better than lower voltage units (commonly 5 KV) because they simply last longer. The connection between the power supply to the ionizer is a high voltage cable and power is lost in the cable. In addition, the power supply transformer will weaken over time. A 7 KV power supply will last longer, and that means lower replacement cost.
3. Repairable Power Supply – this is a very important feature and many power supplies are NOT repairable. The ones utilized by Nex Flow™ can be easily repaired
4. Safety – the ionizers used by Nex Flow™ have a special connector used to connect to the power supply to prevent personal contact (and shocks) by accidentally disconnecting when the power supply is on.

As mentioned, the focus of Nex Flow™ is primarily for cleaning statically charged surfaces and removing static charge at a distance. This is done by combining an ionizer (bar or “point”) with an air amplifying device. Nex Flow™ does this with air knives to make the Air Blade™ ionizer, which is the most common unit, to neutralize and clean all types of charged relatively flat surfaces like auto bodies (the dust is charged), plastic door panels, bumpers, computer cases, etc.). The Ion Blaster Beam™ uses an ionizing point connected to a plastic head mounted on the end of an air amplifier to create a cone of ionized air. Applications include cleaning and neutralizing blow molded tanks, and even removing scrap from molding machines after the molding process.

The way these items work is that they take the “ion cloud” produced by the ionizer and pushes it over a distance to the target, neutralizing the surface and cleaning the surface. Once the static charge is removed, dust and debris easily blow off with minimal pressure. Often only 20 or 30 PSIG pressure is required for blow off.

There is, however, a great myth about just how far away from the static eliminator you can be for effective static removal. An air knife and air amplifier will produce a laminar flow of amplified air. This laminar flow carries the ionized air produced by the anti-static device. Because the flow is laminar, the “ions” will not recombine as fast as they would with, for example, a blower. So this means that the neutralization effect will work over a greater distance. But, just how far is this distance? Some companies claim it is 20 feet but that is somewhat dubious. Even with a laminar flow, the “ions” will still recombine as they travel. The rule is this – the more concentrated and dense the “ion cloud” the faster the neutralization of the charged surface and, the further you get from the ionizer, even if pushed by a laminar flow, the weaker the ion cloud will get. So even at two feet away you will have a weaker concentration of ions to remove the static charge or, the longer the exposure time needed to remove the static charge. If the charged surface is 20 feet away, you may still be able to neutralize the surface but, it may take a few minutes instead of a few milliseconds.

The fact is, even without air behind it, a static bar 20 feet from a charged surface can still neutralize that surface although it could take up to an hour to do so. Practically speaking, in most manufacturing applications you do not have that exposure time as the product is “moving”. In slow-moving applications, the practical limit is about 2 feet from the ionizer. If the target is moving rapidly, there may still not be enough “dwell time” to reduce the charge. In such situations, a stronger static bar is utilized. Static removal “time” really does not depend that much on laminar flow – it depends on the strength of the ionizer itself.

Nex Flow™ or any of their trained representatives worldwide can advise on what is needed for any particular application.

ONE POINT IONIZER:

The **One-Point-Ionizer OPI** was developed for the neutralization of tiny parts. This Ionizer is perfectly suited for mounting in places where there is little room. The plug of the electrode must simply be connected to the power supply and the unit can be quickly set into operation without tools.

The One-Point-Ionizer **OPI** has proven its value repeatedly in daily use, e.g. in the medical industry. The **OPI** can also be equipped with compressed air (Mini-Jet Ionizer).

NOTE: The pin carries high voltage and must not be touched while in operation.

DIMENSIONS:

TECHNICAL:

TYPE	OPI INSEPARABLE HV-CABLE, ATTACHED PERMANENTLY TO THE BAR
Diameter	0.63" (16 mm)
Length	1.77" (45 mm)
Operating temperature	41°F to 122°F (+5°C to +50°C)
Optimum effective distance	1.18" (30 mm)
Smallest bending radius (cable)	R 50

PART NO.	DESCRIPTION
17510	ONE POINT SPOT IONIZER c/w 6 feet (2 meters) cable.
17610	MINI-JET IONIZER (JET + ONE SPOT ASSEMBLED)

MINI JET IONIZER:

The Haug Mini Jet Ionizer neutralizes electrostatic spot charges with air support, great efficiency and right force over a small flat area. This unit proves its efficiency especially in mounting places where there is little room or where mounting is very complicated. Applications include injection molding for the elimination of material particles or for cleaning of pendants. It encompasses the use of the One Point Ionizer with a flat plastic Nozzle.

Ion Blowers:

Where air is required to affect static removal at a distance, and blowoff force is not required, and compressed air is not available but there is adequate space, the Ion Blower can be used with either the standard Model RN static bar or the extra powerful Model VS bar. These units are easy to mount and simple to operate with an adjustable fan. The bar is located outside the blower for easy maintenance and cleaning. Three different sizes are available - small, medium and large lengths.

Either the standard strength Model RN static bar is supplied and for difficult highly charged surfaces the extra strength Model VS bar is used.

Applications:

- ▶ On Winding and Unwinding Systems (especially for Films and Foil) on Injection Molds and their handling systems
- ▶ In the production of circuit boards
- ▶ In the electronic Industry
- ▶ In the plastics and packaging industry

The Ion Air Blower becomes very flexible when a larger operating length is required. Several Units can be 'daisy-chained' in series. In this case, only one Ionizing Bar and one Power Supply is required.

Technical Specifications Ion-Air blower	
Size	Unit with 2 retaining holders, with adjustable screws and base
Length A	Length 18"(457 mm), weight 2.7 kg(5.95lb) max. bar length 14.96"(380 mm)
Length B	Length 32"(813mm), weight 3.6 kg(7.93lb) max. bar length 30.70"(780 mm)
Length C	Length 61.37"(1549 mm), weight 7.0 kg(15.43lb) max. bar length 59.4"(1510 mm)
Rated supply voltage	115 V / 230 V
Rated frequency	50-60 Hz

(Mounting Brackets not shown)

ION BLOWERS - when compressed air is NOT an option

PART NO.	DESCRIPTION
17001	Small blower 18" (457mm) c/w standard RN static bar & ENC power supply, 110V
17002	Medium blower 32" (813mm) c/w standard RN static bar & ENC power supply, 110V
17003	Large blower 60" (1549mm) c/w standard RN static bar & ENC power supply, 110V
17004	Small blower 18" (457mm) c/w standard RN static bar & ENC power supply, 220V
17005	Medium blower 32" (813mm) c/w standard RN static bar & ENC power supply, 220V
17006	Large blower 60" (1549mm) c/w standard RN static bar & ENC power supply, 220V
17011	Small blower 18" (457mm) c/w super triple VS static bar and ENC power supply, 110V
17012	Medium blower 32" (813mm) c/w super triple VS static bar and ENC power supply, 110V
17013	Large blower 60" (1549mm) c/w super triple VS static bar and ENC power supply, 110V
17014	Small blower 18" (457mm) c/w super triple VS static bar and ENC power supply, 220V
17015	Medium blower 32" (813mm) c/w super triple VS static bar and ENC power supply, 2200V
17016	Large blower 60" (1549mm) c/w super triple VS static bar and ENC power supply, 220V

Static Testing:

Multicheck Model 80301 -tests if static bars and power supplies are working. The high-voltage test unit Multicheck is a performance testing unit for any power supply and for HAUG ionization units. Unlike cheap AC Testers which only show if power is going into power supplies or static bars, the Multicheck actually indicates if a power supply or bar is working. As you get close to the static bar, or power supply, a red light goes on indicating power to the unit, then if there is adequate voltage to make the system work, the light goes green. A minimum voltage of 3600 volts is required to insure that a static elimination system is working. The Multicheck light will turn green if you have that voltage. AC Testers will NOT do this and are not an adequate indicator so be wary of marketing ploys which may offer AC testers as an accurate device for testing power supplies or static bars.

For testing power packs, the red measuring probe is inserted into the high-voltage socket as far as it will go. After pressing the red push button the LED will illuminate green if the unit functions correctly. In case of malfunction, the LED will illuminate in red or no display at all is visible

For testing ionizing units the test unit is moved vertically towards the ionizing tips. The LED will flash red; when the probe makes contact, the LED will illuminate in green if the ionizing unit functions correctly.

Hand Held Static Meter Model 80302 - used to indicate static charge on parts, sheets and webs. The Hand Held "Static Control" meter is reasonably priced and easy to handle. It is operated using an ON/OFF soft key (with circuit-breaker) and two further soft keys for the 0-100 and 0-1000 kV/m measuring ranges. The meter is battery powered. It should be part of any basic equipment of every electrical engineering workshop. It is rugged and durable for use in all types of plants operations.

Hand Held Static 1 Digital Static Meter Model 80303 - The Static 1 is a small hand-held field strength meter with digital display for measuring electrostatic charges in Volts and is used if more accurate readings are required than with the standard hand held meter. In order to obtain optimum results, the distance between test object and sensor head - depending on the degree of charge and the condition of the objects' surface - can be selected incrementally. The device is equipped with a Hold function to keep the measured value stored on the display. The integrated micro-computer automatically converts the measured field strength into the equivalent charge in Volt.

RING VAC™

Convey solid materials, waste, trim, small parts with virtually no moving parts

WHAT ARE THEY - REASONS TO USE

The Ring Vac™ - Pneumatic Conveying System has virtually no moving parts, conveys material at high rates and over long distances. They utilize only compressed air for a powerful, efficient venturi action along its length in a compact design for high capacity conveying over large distances. Ring Vacs are available in both coated aluminum or stainless steel. Simply clamp a standard hose size to each end of the Ring Vac™ to create this high energy conveying system. Threaded versions may be connected into standard pipe thread. No moving parts for maintenance free operation with capacity and flow controlled with a pressure regulator. Sizes are 3/8" (10mm), 1/2" (13mm), 3/4" (19mm), 1" (25.4mm), 1-1/4" (32mm), 1-1/2" (38mm) and 2" (51mm) and 3" (76.2mm). Any size beyond that can be prohibitive for most applications due to high compressed air requirements.

Beyond 3", the vacuum ability begins to drop significantly except for highly intermittent applications. However 3" units are available for such applications. Larger sizes are available on special order.

Anodized aluminum and high temperature stainless steel Ring Vac™ air conveyor can convey all types of solids in large volumes over great distances with no moving parts.

APPLICATIONS:

- ▶ Hopper Loading
- ▶ Material Conveying
- ▶ Trim Removal
- ▶ Transfer Parts
- ▶ Filling Operations
- ▶ Thread/fiber Tensioning

RING VAC™ BENEFITS:

- ▶ Longer life in difficult environments than competitive models.
- ▶ Ease of use.
- ▶ Simple and easy control of material flow.
- ▶ Maintenance free operation.

RING VAC™ FEATURES:

- ▶ Made of anodized aluminum with no moving parts. Regular and high temperature stainless steel models are available for higher temperature and corrosive environments.
- ▶ Standard sizes to fit standard hose diameter for easy clamping. Threaded versions connect easily to regular pipe thread : 1" (25mm), 1-1/4" (32mm), 1-1/2" (38mm), 2" (51mm). Special sizes can be manufactured if required.
- ▶ Utilizing a pressure regulator will control the flow material.
- ▶ Instant on/off with no moving parts, no electricity or explosion hazard.

A Model 30004S Stainless Steel 2" Ring Vac™ Air operated conveyor moves dried peas at a pet food manufacturing facility.

TYPES OF RING VACS

The Ring Vac™ Pneumatic Conveying System is available in anodized aluminum, 303/304 stainless steel and in 316L stainless steel. Our special high temperature stainless version is rated to 1200°F (649°C)

Regular models connect to a standard hose or tube to provide a powerful and simply in-line conveying system. Threaded versions thread directly into threaded pipe.

Special materials can be utilized for unique applications. If greater conveying force is required the conveying “generator” can be machined for higher capacities although they will use more compressed air.

An optional bracket allows for easy mounting.

SELECTION

The Ring Vac™ is available in a wide variety of sizes depending on your application. There are certain criteria to determine the size you need:

- ▶ Diameter of the parts that need to be conveyed
- ▶ Rate required for conveying (by weight or volume)
- ▶ Diameter of the tube, pipe or hose used
- ▶ Material- Aluminum, stainless or high temperature (To 1200°F (650°C)) stainless
- ▶ Hose connection with clamp or threaded unit

SPECIAL DESIGNS

The high temperature models are suited to temperatures up to 1200°F (650°C). One ideal use is for sampling flue gases. Special versions can be supplied with medical flanges, and specific materials, higher flow rates and vacuum depending on your application.

RING VAC™ - HOW IT WORKS:

Ring-Vac™ compressed air conveying system - Compressed air enters at point (A) into a annular plenum chamber and injected into the throat of the unit through directed nozzles. These jets of compressed air create a vacuum at the inlet (C) which draws in material and accelerates it through the unit and out at (D) conveying the material over a great vertical or horizontal distance.

X-STREAM™ RING VAC™

Convey solid materials, waste, trim, small parts with virtually no moving parts further with wear resistance

WHAT ARE THEY - REASONS TO USE

Conveyors X-Stream™ Ring Vac™ – pneumatic conveying system is similar to the regular Ring Vac™ but with much more power to convey materials much further both vertically and horizontally. In addition they are hard anodized for abrasion resistance to make them last long in moving abrasive, rough materials. As with the regular Ring Vac™ they utilize only compressed air for a powerful, efficient venture i action along its length in a compact design for high capacity conveying over large distances. Simply clamp a standard hose size to each end of the Ring Vac™ to create this high energy conveying system. Threaded versions may be connected into standard pipe thread. No moving parts for maintenance free operation with capacity and flow controlled with a pressure regulator. Sizes are 1" (25mm), 1-1/4" (32 mm), 1-1/2" (38 mm) and 2" (51 mm). Any size beyond that can be prohibitive for most applications due to high compressed air requirements.

Beyond 2", the vacuum ability begins to drop significantly except for highly intermittent applications. For applications beyond 2", a blower system often becomes far more economical except in a rare number of possible applications. However, larger size versions are available on special order. Anodized aluminum and high temperature stainless steel Ring Vac™ air conveyor can convey all types of solids in large volumes over great distances with no moving parts.

APPLICATIONS:

- ▶ Hopper Loading
- ▶ Material Conveying
- ▶ Trim Removal
- ▶ Transfer Parts
- ▶ Filling Operations
- ▶ Thread/fiber Tensioning

HEAVY DUTY X-STREAM™ RING VAC™ BENEFITES:

- ▶ Longer life in difficult environments than competitive models.
- ▶ Ease of use.
- ▶ Simple and easy control of material flow.
- ▶ Maintenance free operation.

HEAVY DUTY X-STREAM™ RING VAC™ FEATURES:

- ▶ Made of Hard Anodized aluminum with no moving parts. Ideal for moving abrasive materials
- ▶ Extra strength to convey longer distances both vertically and horizontally than standard models.
- ▶ Utilizing a pressure regulator will control the flow of material
- ▶ Instant on/off with no moving parts, no electricity or explosion hazard

Heavy Duty X-Stream™ Ring Vac™ Model 30002X transports an abrasive material over 100 feet across a plant floor from one operation to the next

TYPES OF RING VACS

The Heavy Duty X-Stream™ Ring Vac™ Pneumatic Conveying System comes in hard anodized aluminum for abrasion resistance and with more power than the standard versions to convey greater vertical and horizontal distances. Regular models connect to a standard hose or tube to provide a powerful and simply in-line conveying system. Threaded versions thread directly into threaded pipe.

The generator can be machined further for even larger capacities and distances although they can will use more compressed air.

An optional bracket allows form easy mounting.

SELECTION

The Heavy Duty X-Stream™ Ring Vac™ is available in a wide variety of sizes depending on your application. There are certain criteria to determine the size you need:

- ▶ Diameter of the parts that need to be conveyed
- ▶ Rate required for conveying (by weight or volume)
- ▶ Diameter of the tube, pipe or hose used
- ▶ Material- Hard Anodized Aluminum

SPECIAL DESIGNS

The high temperature models are suited to temperatures up to 1200°F (650°C). One ideal use is for sampling flue gases. Special versions can be supplied with medical flanges, and specific materials, higher flow rates and vacuum depending on your application.

Heavy Duty X-Stream™ Ring Vac™ - HOW IT WORKS:

Ring-Vac™ compressed air conveying system - Compressed air enters at point (A) into a annular plenum chamber and injected into the throat of the unit though directed nozzles. These jets of compressed air create a vacuum at the inlet (C) which draws in material and accelerates it through the unit and out at (D) conveying the material over a great vertical or horizontal distance.

X-STREAM™ SUPREME PNEUMATIC AIR OPERATED CONVEYOR – (XSPC)

NON-CLOGGING Powerful Air Operated Conveyor to convey solid materials, waste, trip small parts with no moving parts – straight through design prevents clogging

WHAT ARE THEY - REASONS TO USE

The X-STREAM™ SUPREME PNEUMATIC AIR OPERATED CONVEYOR, or XSPC is a pneumatic conveying system based on Ring Vac™ technology but design is such that the flow of material is “straight through” preventing the clogging of materials which may be subject to this in traditional venture systems. Designed for optimum air consumption efficiency but powerful conveying action. Material is hard anodized aluminum. Stainless steel can be provided in special order. Simply clamp a standard hose size to the end of the XSPC to operate this high energy conveying system. No moving parts for maintenance free operation with capacity and flow controlled with a pressure regulator. Sizes are based on internal dimensions: 1” (25mm), 1.25” (31.5 mm), 1.5” (38 mm) and 2” (50 mm) Inside diameters. Special versions can be produced for your applications.

Cleaning of the units is easy as they can be dismantled like the Ring Vac's, cleaned and re-assembled.

APPLICATIONS:

- electrical and electronic components
- springs
- packaged goods
- paper and plastic strips
- textiles
- chip removal
- wood chips

XSPC FEATURES

- Made of hard anodized aluminum with no moving parts.
- Standard Sizes to fit standard hose diameter for easy clamping. Special sizes can be manufactured if required.
- Using a pressure regulator will control the flow of material.
- Instant on/off with no moving parts, no electricity or explosion hazard.
- Can be taken apart and cleaned easily.
- Special versions and materials can be made.

XSPC – HOW IT WORKS:

The X-stream™ Supreme Pneumatic Conveyor (XSPC) – Compressed air enters at point (A) into an annular chamber and injected into the throat of the unit from the inside wall of the unit through directed nozzles (B). The inside is “straight through” design to prevent any clogging of conveyed material. These jets of compressed air create a vacuum at the inlet (C) which draws in material and accelerates it through the unit and out at (D) conveying the material over a great vertical or horizontal distance.

X-STREAM™ SUPREME PNEUMATIC AIR OPERATED CONVEYOR(XSPC) PERFORMANCE

STREAM VAC™

Dust Collection and Fume Extraction system for spot applications –
portable, low cost, maintenance free

WHAT ARE THEY - REASONS TO USE

The versatile and affordable compact air cleaning system is ideal for the removal of fumes, dust and other air pollution from work stations without the need for heavy and bulky machinery. The **Nex Flow™ Stream Vac™** is an in line air conveyor that when hooked up to a 2" hose and connected to a compressed air line, it will remove up to several hundred cubic feet of air while using only a minimal amount of compressed air, taking with it welding fumes, soldering fumes, particulate from local grinding operations, smoke and particulate from almost any "spot" application.

A safe and improved healthy condition in the workplace improves employee morale, increases worker productivity, decreases absenteeism and even reduces insurance costs in many cases. A cleaner environment can even enhance the performance of machinery and sometimes cut maintenance costs. However, until now there was no low cost solution to enhance the environment.

The low cost, compact and portable, the unit operates utilizing a minimal amount of compressed air. It comes with a magnetic stand to "plug into position" on any magnet accepting metal surface. Simply connect the snap – on collection attachments and clamp a 2" hose on the opposite side, hook up your compressed air and you are set to go.

SMART N CLEVER™
MORE THAN INTELLIGENT

STREAM VAC™ FEATURES:

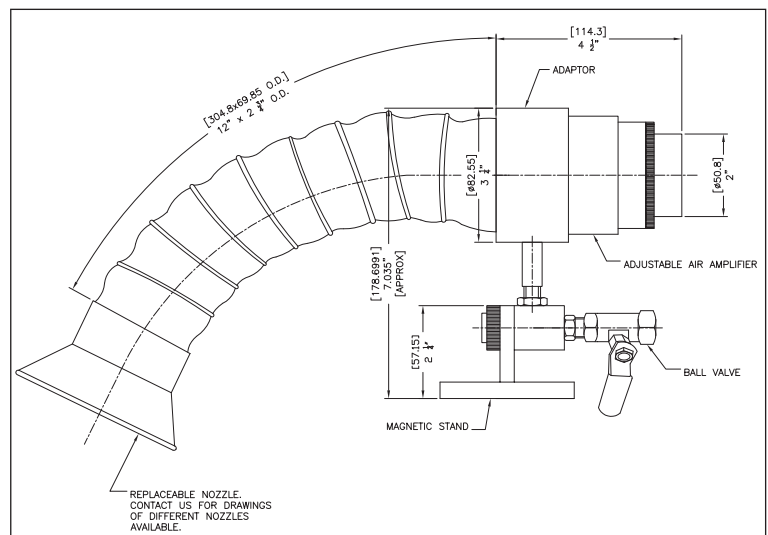

- ▶ No moving parts.
- ▶ Driven by air not electricity.
- ▶ Compact and portable - easy to install.

STREAM VAC™ BENEFITS:

- ▶ Maintenance Free
- ▶ Safe – no electricity
- ▶ Simple to install and use – portable

Stream Vac™ removing soldering fumes from a circuit board soldering station

STREAM VAC™ - HOW IT WORKS:

The Stream Vac™ is used for the removal of fumes, smoke, dust and particulate at any workbench location with a base that will support the strong magnetic “swivel” base (A) for flexible position of the system. Compressed air is piped in at point (B) on the air amplifier (which is also adjustable to control the suction). Fumes, smoke and particulate enter at (C) and a 2” hose (Customer supplied) at (D) takes the material to a safe location. Three different suction attachments are available. Manual shutoff valve included.

SPECIFICATIONS:

The Stream Vac™ uses only 20 SCFM (567 SLPM) at 80 PSIG (5.5 bar) yet will move up to 16 times that volume of air drawing in fumes, dust, smoke and particulate. Standard inlet is 3/8” NPT. Clean, dry air is recommended and an optional filter with automatic drain is available. Three types of suction attachments are supplied in the package which has a strong magnetic base to secure its position.

The Stream Vac™ includes a Model 40002 adjustable air amplifier, magnetic base, manual shutoff valve, all attachments and fittings, and three inlet attachments: round nozzle, rectangular nozzle and tapered oval nozzle.

58884 - TAPERED NOZZLE

58882 - ROUND NOZZLE

58883 - RECTANGULAR NOZZLE

PART NO.	DESCRIPTION
40002FMS	Stream Vac™ fume removal system c/w magnetic swivel base, assembly, and hose kit
90004	Filter with auto drain
90005	Oil Removal filter with auto drain

Stream Vac™ used on manufacturing line to remove welding fumes.

316L STAINLESS STEEL REVERSIBLE DRUM ANGEL

Empty or fill a 55-US gallon drum (45 Imperial/205L) in under 90 seconds! Reversible unit fills and empties a drum

WHAT ARE THEY – REASONS TO USE

The 316L STAINLESS STEEL Reversible Drum Angel/Drum Pump is a maintenance free system to recover spilled liquids, coolant, sludge, tramp oil, waste water and other liquids using only compressed air. The compressed air system attaches easily to any closed head of a drum (30 or 55 US gallon, or 45 Imperial gallon or 205 liter drum). The reversible feature allows you to fill or empty the drum in under two minutes with the simple turn of a knob. The flow rate can be controlled either by a shut-off valve or regulator, or by the knob itself. Drum should have a nominal wall thickness of 1.5mm (16 gauge) and in good condition to maintain integrity of system performance and safety. Using no electricity, these system last and last, unlike many electrical units that wear out quickly in harsh industrial environments. A built in safety feature prevents overfilling and spills

REVERSIBLE DRUM ANGEL FEATURES:

- ▶ No moving parts
- ▶ Driven by air not electricity
- ▶ 316L Stainless Steel construction
- ▶ Built in pressure relief and vacuum relief systems
- ▶ Compact and portable - easy to install
- ▶ Auto system shutoff to prevent overflow
- ▶ Fits standard closed head drum
- ▶ System is complete with spill recovery system

Reversible Drum Angel is used to remove coolant from a sump. It is then transferred to another location and emptied from the drum.

REVERSIBLE DRUM ANGEL BENEFITS:

- ▶ Maintenance Free
- ▶ Safe - no electricity and pressure/vacuum relief
- ▶ Long life
- ▶ Simple to install and use - portable
- ▶ Maintenance free with output easily controlled, safe to use
- ▶ Cannot over fill
- ▶ Usable on any standard drum
- ▶ Unlike some competitive unit Drum Angel is complete with a spill recovery skimmer at no extra cost

REVERSIBLE DRUM ANGEL - HOW IT WORKS

Reversible Drum Angel/Drum Pump for liquids - Compressed air enters at point (A) and into the Drum Angel/Drum Pump unit (B) which is mounted onto a sealed metal drum via the small hole. An adjustable knob (C) controls whether the unit creates a vacuum inside the drum to fill the drum or pressure to empty the drum. The liquid enters or fills the drum through a tube assembly (D) inserted and threaded into the large drum hole. An elbow attachment (E) connects the tube assembly to the hose and attachment assembly (F) which collects or dispels the liquid. Various attachments are available for liquid collection and transfer.

The 316L Stainless Steel Drum Angel Model 35011S includes the Drum Angel unit, crevice tool, skimmer tool and heavy duty squeegee tool, two (2) straight plastic wands, metal wand for use with the heavy duty squeegee tool, 10' of plastic hose with cuffs and drum adaptor with plastic tube. OPTIONAL all 316L stainless drum adaptor and tool available on request at extra cost. Contact representative.

NOTE: For safety reasons a steel drum with a nominal thickness of 1.5 mm or 16 gauge is recommended as per ANSI standard # MH2-1997.

REVERSIBLE DRUM ANGEL

PART NO.	DESCRIPTION
35011S	Complete Drum Angel Kit for 55-gallon drum
35012S	Complete Drum Angel Kit for 30-gallon drum
35001S	Drum Angel Only

SPECIFICATIONS:

The Drum Angel uses only 18 SCFM (510 SLPM) at 80 PSIG (5.5 bar) and can remove water at 30 US gallons per minute (114 Liters per minute). Standard inlet is 1/4" NPT.

The Drum Angel can be used to clean up many kinds of spills quickly and effectively.

ACCESSORIES

90001	Filter with auto drain
90012	Manual shutoff valve
90005	Oil Removal filter with auto drain
90041	55-gallon Drum Dolly

X-STREAM™ HAND VAC

Use as a Blow Gun or as A Vacuum to Clean or Transfer Solid Material with no moving parts.

WHAT ARE THEY - REASONS TO USE

The X-Stream™ hand vac is the low cost solution to a variety of industrial housekeeping applications. It is a blow gun, a vacuum gun, a collection system and a transfer system in one simple package.

The X-Stream™ hand vac is light weight die cast aluminum and uses less air than a normal blow gun. The amplified air flow is approximately 12 times the air consumption. It draws a vacuum at one end to produce a high vacuum for collection or transfer of materials. It is easily converted from a blow gun into a vacuum gun and back again.

In blowoff mode, the 1-1/4" (32 mm) diameter allows it to cover a much greater area than a small blow gun for faster cleaning and drying. It can also be used to transfer material over a long distance using a vacuum hose which can be supplied. In vacuum mode, it can be used to vacuum up debris if more appropriate than blowing air, and debris can be collected in an available reusable vacuum bag.

X-STREAM™ HAND VAC FEATURES:

- ▶ No moving parts.
- ▶ Driven by air not electricity.
- ▶ Die Cast construction.
- ▶ Can switch from blowoff mode to vacuum in seconds
- ▶ Lightweight and portable
- ▶ No moving parts

X-STREAM™ HAND VAC BENEFITS:

- ▶ Maintenance Free
- ▶ Safe and Long life
- ▶ Durable
- ▶ Flexible in use - vacuum or blowoff
- ▶ Ergonomic - comfortable to use
- ▶ Maintenance free

APPLICATIONS:

- ▶ Clean machinery and controls
- ▶ Blowoff coolant, water, chips, scrap
- ▶ Vacuum sawdust and solid spills, shavings, waste
- ▶ Transfer small parts, trim, materials

Model 36011 Hand Vac collection system is used to clean & collect dust & dirt from inside a Control Panel.

Model 36012 transfer system is used to move ball bearings from a bucket to a storage drum.

X-STREAM™ HAND VAC - HOW IT WORKS

X-Stream™ Hand Vac - Compressed air enters at point (A) and is allowed to flow into the Hand Vac using the trigger at point (B). Air either exits at point (C) for blow off or point (C) is a vacuum depending on the setup of the generator inside the Hand Vac. Similarly at point (D), air either enters (in blow off mode) or exits (vacuum mode). The generator inside can be reversed to change mode from blow off to vacuum and back again as required.

IN BLOW MODE THE X-STREAM™ HAND VAC CONSUMES LESS AIR THAN ORDINARY BLOW GUNS

SPECIFICATIONS:

The X-Stream™ Hand Vac uses only 13 SCFM (368 SLPM) at 80 PSIG (5.5 Bar) to produce a vacuum of - 29.5 inches water (-7 kPa) and produces a force of 9 ounces (255 grams). Standard inlet is ¼" NPT

X-STREAM™ HAND VAC

PART NO.	DESCRIPTION
36011	X-Stream™ Hand-Vac collection system
36012	X-Stream™ Hand-Vac transfer system
36013	X-Stream™ Hand-Vac all purpose system
36001	X-Stream™ Hand-Vac only

ACCESSORIES

PART NO.	DESCRIPTION
90001	Filter with auto drain
90005	Oil removal filter with auto drain

Model 36011 - Collection System consists of X-stream™ hand vac plus reusable collection bag, cleaning brush, crevice tool, skimmer tool, two extension wands, and stainless steel hose clamp

Model 36012 - Transfer System consists of X-stream™ hand vac plus 10 foot (3 m) vacuum hose with cuffs at both ends, cleaning brush, crevice tool, skimmer tool, two extension wands, and stainless steel hose clamp

Model 36013 - All Purpose System consists of X-stream™ hand vac plus 10 foot (3 m) vacuum hose with cuffs at both ends, reusable collection bag, cleaning brush, crevice tool, skimmer tool, two extension wands, and stainless steel hose clamp.

BLOW DIRT, CHIPS, SCRAP OUT OF DEEP BLIND HOLES IN ONE EASY STEP THAT REALLY WORKS!! IDEAL FOR CLEANING DRILLED HOLES AND DEEP CAVITIES. CAN CLEAN HOLES AS BIG AS 1" (25 mm) DIAMETER AND AS DEEP AS 20 inches (525 mm).

WHAT ARE THEY - REASONS TO USE

Unlike make shift vacuum type systems that are cumbersome and do not always work well, the **X-STREAM™ BLIND HOLE CLEANING SYSTEM** actually works and is specifically designed to remove dirt, debris, chips and scrap from drilled holes, deep containers, and grooves -1" diameter to 20" deep!. Only uses 11 SCFM at 80 PSIG for more shallow holes and only 20 SCFM for very deep holes! The **X-STREAM™ BLIND HOLE CLEANING SYSTEM** is ideal for blowing out and collecting chips, contaminants and debris from deep containers, drilled holes and grooves whereas blow guns can create a potentially hazardous situation with flying debris. The **X-STREAM™ BLIND HOLE CLEANING SYSTEM** creates the ideal blow-off force once the hole adaptor is flush with the hole directing the unit in such a way to dislodge and direct all the debris into the collection bag. All dirt and debris are contained within the unit as it is passed into the reusable collection bag, protecting the operator from any contaminants.

X-STREAM™ BLIND HOLE CLEANING SYSTEM FEATURES

- No moving parts
- Driven by air and not electricity
- Aluminum cast construction
- Lightweight and portable
- Various packages available depending on hole diameter & depth
- Custom designs available

X-STREAM™ BLIND HOLE CLEANING SYSTEM BENEFITS

- Maintenance Free
- Safe when used as directed
- Long Life
- Durable
- Ergonomic
- No Electricity so no shock hazard
- Low Air consumption

X-STREAM™ BLIND HOLE CLEANING SYSTEM HOW IT WORKS

The **X-STREAM™ BLIND HOLE CLEANING SYSTEM** comes complete with hose clamp and material collection bag (F), connected to the Cleaning Gun (B) using a plastic hose connection. Compressed air is supplied into the unit via the customers air hose (A). The replaceable hole adaptor (E) is connected to the Cleaning Gun. Simply place the hole adaptor (C) over the slot, or hole or container to completely cover the hole. Press the handle on the Cleaning Gun to blow compressed air into the slot, hole or container via the nozzle (D) to remove the debris. Once the bag is filled, remove the bag with the hose clamp, clean and replace

BLIND HOLE CLEANING SYSTEM — comes complete with Cleaning Gun, Aluminum cast Hole adaptor, nozzle, collection bag c/w hose clamp and plastic hose connection

48104-25-510	Blind Hole Cleaning System for Max. Hole Dia. of 25 mm and hole depth of 525 mm.

MODEL	DESCRIPTION
48105	Blind Hole Cleaning System Kit with all Hole Adaptors and Nozzles plus Water Removal Filter c/w auto drain

ACCESSORIES

MODEL	DESCRIPTION
90004	Water Removal Filter c/w Auto Drain
90005	Oil Removal Filter c/w Auto Drain

BLIND HOLE CLEANING COMPONENTS

48102-16	Blind Hole Gun c/w Adaptor for Maximum Hole Diameter of 16 mm – no nozzles
48102-20	Blind Hole Gun c/w Adaptor for Maximum Hole Diameter of 20 mm – no nozzles
48102-25	Blind Hole Gun c/w Adaptor for Maximum Hole Diameter of 25 mm – no nozzles
48100-16	Adaptor Only for Maximum Hole Diameter of 16 mm
48100-20	Adaptor Only for Maximum Hole Diameter of 20 mm
48100-25	Adaptor Only for Maximum Hole Diameter of 25 mm

NOTE: All Standard nozzles below are for minimum inside diameter holes of 7 mm. Special small nozzles for smaller holes and other non-standard cavities available on request.

48103-15	Nozzle Length - 15 mm for hole depth up to 50 mm (11 SCFM @80 PSIG)
48103-75	Nozzle Length - 75 mm for hole depth up to 90 mm (20 SCFM @80 PSIG)
48103-150	Nozzle Length - 150 mm for hole depth up to 165 mm (20 SCFM @80 PSIG)
48103-230	Nozzle Length - 230 mm for hole depth up to 245 mm (20 SCFM @80 PSIG)
48103-300	Nozzle Length - 300 mm for hole depth up to 315 mm (20 SCFM @80 PSIG)
48103-375	Nozzle Length - 375 mm for hole depth up to 390 mm (20 SCFM @80 PSIG)
48103-450	Nozzle Length - 450 mm for hole depth up to 465 mm (20 SCFM @80 PSIG)
48103-510	Nozzle Length - 510 mm for hole depth up to 525 mm (20 SCFM @80 PSIG)
48104-0	Bag with plastic hose and Stainless Steel hose clamp

FRIGID-X™ VORTEX TUBES

Produce cold air as low as minus 50°F (minus 46°C) from compressed air with no moving parts
to spot cool or cool enclosures with no electricity

WHAT ARE THEY - REASONS TO USE

Vortex Tubes are devices that work on a standard compressed air supply. Air enters the vortex tube and is literally split into two parts - cold air at one end, and hot air at the other - all without any moving parts.

Vortex Tubes have an adjustable valve at the "hot" end which controls the volume of the air flow, and the temperature exiting at the cold end. By adjusting the valve, you control the "cold fraction" which is the percentage of total input compressed air that exits the cold end of the Vortex Tube. Our Vortex Tubes may also be supplied with a fixed preset "cold fraction" instead of an adjustable valve.

Inside is the interchangeable brass "generator" which can alter the air used in the Vortex Tube, and control the temperature ranges you wish to have at the cold and hot ends. There are several ranges of generators for compressed air capacity. There are also two basic types of generators - one to produce the extreme cold temperatures (maximum cold temperature out called the C generator) and one type to produce the maximum amount of cooling (maximum refrigeration called the H generator).

WHY THE FRIGID-X™ VORTEX TUBE OVER OTHERS :

The Frigid-X™ Vortex Tube is constructed of stainless steel and uses a generator and valve made of brass and sealed with viton o-rings to allow their use in the widest range of environments. This also allows for greater life and better consistency between Vortex Tubes made. In addition, it is usable in high temperature environments AS IT COMES with NO extra charge unlike many of our competitors.

Most competitors use plastic generators and standard Buna N O-Rings and charge extra for brass and high temperature-rings. The unique design and quality of materials used in Frigid-X™ products will deliver years of maintenance-free operation.

FRIGID-X™ VORTEX TUBE ADVANTAGES:

- ▶ No moving parts.
- ▶ Driven by air not electricity.
- ▶ Small and lightweight - portable.
- ▶ Low in cost compared to most others
- ▶ Superior design and performance
- ▶ Maintenance free operation
- ▶ Made of durable stainless steel and metal parts - no cheap plastic parts
- ▶ Adjustable temperature range
- ▶ Generators are interchangeable

Small Vortex Tube

Medium Vortex Tube

Large Vortex Tube

FRIGID-X™ VORTEX TUBE - HOW IT WORKS

Compressed air enters at point (A). Inside the tube the compressed air is made to spin using a "generator". It travels in one direction along the small (hot end) tube and then back inside itself in the reverse direction creating one stream of air (B) and the second stream of air (C) in the opposite direction. The outside stream of air gets hot and exhausts at point (D). The center column of air gets cold and exists at point (E). Temperatures and capacities can vary by adjusting the hot end plug at (D) and by using different "generators"

Due to space limitation & the need to eliminate water cooling the camera, a Model 50025H Vortex Tube was used to cool a camera housing.

Two Vortex Tubes model 50030H with a Model 55002 Muffler cools and Ultrasonic Welding Horn.

FRIGID-X™ VORTEX TUBE EXPERIMENTAL KITS

Three Experimental Kits are available (Small Vortex Tube Kit, Medium Size Vortex Tube Kit and Large Vortex Tube Kit) which contains the appropriate Vortex Tube, all generators for that size, cold end muffler and filter with auto drain to do testing if you are not certain of what exact size you require.

CONTROLLING THE FLOW RATE AND TEMPERATURE IN THE FRIGID-X™ VORTEX TUBE

The flow rate and temperature in a Vortex Tube are interdependent. When you open the adjusting valve at the hot end, the cold air flow decreases and the temperature drops. As you close the valve the cold air end flow increases and temperature rises. The percentage of the total input air that exits the cold end is termed the "cold fraction". Depending on inlet air temperature a cold fraction of between 60% and 80% produces the optimum combination of flow and temperature drop for maximum cooling effect, when using an H generator. Lower cold fractions produce colder air but do not cool as well because of reduced flow. Most industrial applications require the 60% to 80% setting and the H generator for optimal cooling.

In some instances such as cooling laboratory samples, testing circuit boards and other "cryogenic" applications, a 'C' generator is used which limits the cold end flow rate to lower levels and produces very cold temperatures.

To set the Vortex Tube to the desired temperature simply insert a thermometer at the cold end and adjust the hot end valve. The optimum cooling effect is achieved when the difference from the inlet air temperature and the cold air drops is 50° F (28° C) if the inlet air is relatively cool to 80° F (45° C) below compressed air temperature if the inlet air is relatively hot.

There are three basic physical sizes of Standard Vortex Tubes used in industry - the small, medium and large version. Frigid-X™ Vortex Tubes can be selected by required performance in cooling for the 'H' generator versions and where very cold temperature is required, the 'C' generators are used. However, even with 'C' generators, as expected, the higher the flow rating the greater any cooling effect.

USING THE VORTEX TUBE :

Back pressures over 2 psig (0.1 bar) can reduce the performance of a Vortex Tube. Similarly it is important to use a minimum of 25 micron or less filtration to keep the air clean and dry. Vortex tubes alone without ducting can be noisy so mufflers are available for both the cold end and hot end. All of our Vortex Tubes are built to be used in even high temperature environments at no extra cost.

VORTEX TUBE THEORIES :

There are many theories of the Vortex Tube also known as the Ranque Vortex Tube, the Hilsch Tube, Maxwell's Demon Tube, and the Ranque - Hilsch Tube. Invented in 1933 by French physicist Georges J. Ranque and improved upon by German physicist Rudolf Hilsch in a notable paper published in 1947, there is a great deal of information available on the internet.

To shorten the cooling cycle of molded plastic tanks, a Model 50030H Vortex Tube was used per tank to blow cold air into the tanks.

50150C	Large Vortex Tube with 150C Generator for Maximum Cold Temperature
55001	Cold End Muffler for Small Vortex Tube
55002	Cold End Muffler for Medium Vortex Tube
55003	Hot End Muffler for Small or Medium Vortex Tube
55004	X-Stream Hot End Muffler for Small & Medium Vortex Tubes for extra Muffling
55006	Cold End Muffler for Large Vortex Tube
55007	Hot End Muffler for Large Vortex Tube
51008K	Small Vortex Tube test Kit. Consists of Small Vortex Tube, Cold Muffler, Filter with auto drain, and Generators - 2C, 2H, 4C, 4H, 8C, 8H
51040K	Medium Vortex Tube test Kit. Consists of Medium Vortex Tube, Cold Muffler, Filter with auto drain, and Generators - 10C, 10H, 15C, 15H, 25C, 25H, 30C, 30H, 40C, 40H
51150K	Large Vortex Tube test Kit. Consists of Large Vortex Tube, Cold Muffler, Filter with auto drain, and Generators - 50C, 50H, 75C, 75H, 100C, 100H, 150C, 150H
59008K	Small Vortex Tube Generator Kit Generators - 2C, 2H, 4C, 4H, 8C, 8H
59040K	Medium Vortex Tube Generator Kit Generators - 10C, 10H, 15C, 15H, 25C, 25H, 30C, 30H, 40C, 40H
59150K	Large Vortex Tube Generator Kit Generators - 50C, 50H, 75C, 75H, 100C, 100H, 150C, 150H

NOTE: The last three numbers in the part number indicate the SCFM consumption at 100 PSIG (6.9 Bar) - Example 50025C indicates 25 SCFM air consumption at 100 PSIG (6.9 Bar).

The PLCFC described in Section A is an effective means to control energy used by turning on and off the Vortex Tubes as required.

FRIGID-X™ VORTEX TUBES

With Hand Adjustable and Muffled Hot End

Produce cold air as low as minus 50° F (minus 46° C) from compressed air with no moving parts to spot cool or cool enclosures with no electricity and easily adjust the setting by hand to control the temperature and flow rates.

WHAT ARE THEY - REASONS TO USE

Nex Flow™ Frigid-X™ Vortex Tubes normally come with an adjustable hot end that requires a screwdriver to change the setting. If the application requires an easier adjusting mechanism the Hand Adjustable version is available. For the small and medium sized vortex tubes. It comes with a built in hot end muffler for noise reduction and is made of stainless steel. The Hand Adjustable assembly may also be purchased separately to convert the standard Vortex Tube into a hand adjustable version.

Inside the vortex tube is the interchangeable brass generator which determines the air flow capacity. There are two types – one to produce extreme cold temperatures (maximum cold temperature out call the C generator) and one type to produce the maximum amount of cooling (maximum refrigeration called the H generator). The Hand Adjustable units are used only with the H generators.

WHY THE FRIGID-X™ HAND ADJUSTABLE UNIT:

The Nex Flow™ Frigid-X™ Vortex Tube is constructed of stainless steel and uses a brass generator and brass and stainless hand adjustable system with a plastic knob and integral muffler to allow it to be used in the widest range of environments. In applications which adjustment convenience is necessary this system is an ideal solution. The unique design and quality of materials used in the Frigid-X™ Vortex Tubes will deliver years of maintenance-free operation.

FRIGID-X™ HAND ADJUSTABLE UNIT ADVANTAGES:

- easy adjustment – no screwdriver needed
- driven by air no electricity
- Small and lightweight – portable
- Low in cost compared to others
- Maintenance free operation
- Adjustable temperature range

FRIGID-X™ ADJUSTABLE SPOT COOLER

Produce cold air as low as minus 30° F (minus 34° C) from compressed air to spot cool with easy adjustability

WHAT ARE THEY - REASONS TO USE

The Frigid-X™ Adjustable Spot Cooler is a low cost and maintenance free system which utilizes a vortex tube to produce cold air at one end.

The Frigid-X™ Adjustable Spot Cooler temperature can be adjusted using a knob at the hot end to set the temperature precisely to your requirements. Temperatures range from approximately minus 30°F to room temperature and can be easily set with a thermometer.

The Frigid-X™ Adjustable Spot Cooler System comes with three brass generators for flow rate adjustment - 15 SCFM (425 SLPM), 25 SCFM (708 SLPM) and 30 SCFM (850 SLPM) providing refrigeration up to 2100 BTU/hr (615 Watts).

Cold air is directed using the flexible tubing. A magnetic base is standard for portability and easy mounting of the adjustable spot cooler.

Units are available with either a single point hose kit for small surface area or a dual point hose kit when heat is generated over a larger surface area. Adjustable spot cooler produces a wide range of airflow and temperature by adjusting the knob at the hot end and changing the various generators supplied.

The generators control the air consumption and are easily interchangeable. Adjustable spot cooler has a 25 SCFM (708 SLPM) generator installed that will produce up to 1,800 Btu/hr. of cooling. If less is required, the 15 SCFM (425 SLPM) generator can deliver 1,100 BTU/Hr. If more cooling is needed Nex Flow™ can supply you with the 30 SCFM (850 SLPM) generator for up to 2,100 BTU/Hr. of cooling.

WHY THE FRIGID-X™ ADJUSTABLE SPOT COOLER OVER OTHERS:

All Metal Parts, Stainless Steel Body, Quiet - Tests Show Frigid-X™ Adjustable Spot Cooler is consistently more quiet than the competition.

FRIGID-X™ ADJUSTABLE SPOT COOLER ADVANTAGES:

- ▶ No moving parts.
- ▶ Quiet
- ▶ Driven by air not electricity.
- ▶ Small and lightweight - portable.
- ▶ Low in cost compared to most others
- ▶ Superior design and performance
- ▶ Maintenance free operation
- ▶ Made of durable stainless steel and metal parts, no cheap plastic parts
- ▶ Adjustable temperature range
- ▶ Generators are interchangeable
- ▶ System uses strong magnetic base

A Model 57025AS is used to cool a milling operation of a special ceramic material where the temperature had to be tightly controlled.

FRIGID-X™ ADJUSTABLE SPOT COOLER – HOW IT WORKS

Frigid-X™ - Adjustable Spot Cooler - Compressed air enters at point (A) into the vortex tube component of the spot cooler. The vortex tube splits the compressed air into a hot (B) and cold (C) stream of air. The hot air from the vortex tube is vented to the atmosphere at point (D) after being muffled to reduce noise. Cold air enters into the muffler (E) and then distributed through the hose distribution kit (F) and onto the item being cooled. A strong magnet (G) holds the spot cooler in place. The temperature of the cold air is controlled by an adjustable knob.

FRIGID-X™ ADJUSTABLE SPOT COOLER APPLICATIONS:

- ▶ Solder Cooling
- ▶ Set hot melt adhesives
- ▶ Cool Electronic components
- ▶ Adjusting thermostats
- ▶ Cool welding horns on ultrasonic
- ▶ Cool heat shrink tubing
- ▶ Cool plastic machined parts
- ▶ Cool molded plastics

INLET PRESSURE PSIG (Bar)	AIR CONSUMPTION SCFM (SLPM)	SOUND LEVEL dBA
100 (6.9)	15 (425)	70
100 (6.9)	25 (708)	71
100 (6.9)	30 (850)	72

A Model 57025AS is used to cool a special material on a lathe. A specific temperature was needed due the special material being machined.

FRIGID-X™ ADJUSTABLE SPOT COOLER

PART NO.	DESCRIPTION
57025AS	Frigid-X™ Adjustable Spot Cooler System c/w cooler, magnetic base, single point hose kit, 25H generator (Installed), 15H generator (loose), 30H generator (loose)
57025AD	Frigid-X™ Adjustable Spot Cooler System c/w cooler, magnetic base, dual point hose kit, 25H generator (installed), 15H generator (loose), 30H generator (loose)
56025A	FRIGID-X™ Adjustable Spot Cooler only
OPTIONS	
90001	Filter with automatic drain, 3/8" NPT, 65 SCFM (1841 SLPM)
90005	Oil Removal Filter, 3/8" NPT, 15-37 SCFM (425 to 1048 SLPM)

FRIGID-X™ MINI SPOT COOLER

Cool small parts and tooling with a compact spot cooler with no moving parts.

WHAT ARE THEY - REASONS TO USE

The Frigid-X™ Mini Spot Cooler is a low cost and maintenance free system which utilizes a vortex tube to produce cold air at one end. It is quiet and compact.

Designed for small parts, the Frigid-X™ Mini Spot Cooler produces a stream of 15 to 20 degree F (minus 9.5 to 7 degree C) of cold air to prevent heat buildup depending in inlet air temperature. It can improve tolerances in machining of small critical parts and increase production rates.

Cold air is directed using the flexible tubing. A magnetic base is standard for portability and easy mounting of the mini spot cooler

APPLICATIONS:

- ▶ Needle cooling on sewing machines
- ▶ Cooling small blades
- ▶ Grinding lenses and small parts
- ▶ Cooling small tools

FRIGID-X™ MINI SPOT COOLER

PART NO.	DESCRIPTION
56008F	Mini Frigid-X™ Cooler only (no muffler)
56108F	Mini Frigid-X™ Cooler only (with muffler)
57008F	Frigid-X™ Mini Spot Cooler System c/w cooler, magnetic base, single point hose kit
56008F	Frigi -X™ Mini Spot Cooler only options
90003	Filter with Manual Drain ¼ " NPT

The Mini Spot Cooler utilizes a vortex tube to create one hot stream and one cold stream (see page 9). The cold air produced at the cold end is directed to the surface to be cooled using a flexible hose.

The Mini Spot Cooler is used in the cooling of needles on a sewing machine used to produce heavy materials for carpeting.

FRIGID-X™ BOX COOLER

Packaged System for cooling small enclosures

WHAT ARE THEY - REASONS TO USE

The Frigid-X™ Box Cooler is used for cooling small enclosures for laboratory use, environmental chambers and any application where an enclosure needs cooling (Note: Not approved for electrical and electronic control panels but may be used if approvals not required). This low cost system utilizes a stainless steel vortex tube with an adjustable hot end to control the temperature produced in the enclosure. In the package are all the necessary items to attach the vortex tube along with a separate venting unit to exhaust the hot air being displaced inside the enclosure. An optional hose distribution kit is available to distribute the cold air inside for larger enclosures. Also available is an optional solenoid and thermostat for on-off control.

List of parts:

- No moving parts
- Maintenance Free Operation
- Compact & Easy to Install
- Cooling Capacities to 2900 BTU/hr.
- No CFC's or HCFC's
- Stainless Steel Construction
- No Electricity
- Adjustable Cold Temperatures

FRIGID-X BOX COOLER ADVANTAGES:

- Vortex Tube
- Hot and adjustable with screwdriver or with optional hand adjusting system
- Breather Cap with Lock Nut
- Connecting assembly to box
- Adaptor and hose barb for hose kit
- Optional hose distribution kit

FRIGID-X™ BOX COOLER SYSTEM – HOW IT WORKS

Compressed air enters at point (A) into the vortex tube. The vortex tube splits the compressed air into a hot (B) & cold (C) stream of air. The hot air from the vortex tube is vented to the atmosphere at point (D). Hot air displaced from the box is vented out through the breather cap (E). Cold air enters the box at point (F) or via an optional hose distribution kit (G).

FRIGID-X™ BOX COOLER SYSTEMS

Part No.	Description
50010B	Box Cooler System with hot end adjustable screw 730 BTU/hr. 170 Watts
50015B	Box Cooler System with hot end adjustable screw 1100 BTU/hr. 322Watts
50025B	Box Cooler System with hot end adjustable screw 1800 BTU/hr. 527 Watts
50030B	Box Cooler System with hot end adjustable screw 2100 BTU/hr. 615 Watts
50040B	Box Cooler System with hot end adjustable screw 2900 BTU/hr. 849 Watts
52010B	Box Cooler System with hot end hand adjustable knob 730 BTU/hr. 170 Watts
52015B	Box Cooler System with hot end hand adjustable knob 1100 BTU/hr. 322Watts

52040B	Box Cooler System with hot end hand adjustable knob 2900 BTU/hr. 849 Watts

ACCESSORIES

Part No.	Description
69004	Hose Distribution Kit
55003	Hot End Muffler for Vortex Tube with hot end adj. screw
90004	Filter with Auto Drain
90015	Thermostat and Solenoid Valve Kit for On-Off Control

FRIGID-X™ TOOL COOLING SYSTEM

Produce cold air from compressed air to cool machine tools and other applications to replace messy misting systems, improve product quality and increase production speeds

WHAT ARE THEY - REASONS TO USE

Frigid-X™ Tool Cooling System for dry machining applications - replaces polluting and often toxic mist systems to improve dry machining operations. No mess, no residue and low in cost. It is efficient and can improve dry machining operations and assist in spot cooling applications for a variety of industrial machining processes by increasing machining rates and extending tool life. Produces cold air at approximately 50° F (28° C) below supply air temperature. The unit is muffled for quiet operation. No moving parts assures long life, maintenance free operation while extending tool life and improving production rates. It can prevent smearing of metal or plastics and eliminates wheel loading. Factory set for optimum cooling effect and to prevent freeze up. Can often replace costly mist coolants and certainly improves the quality and output of all types of dry machining operations from metals to plastics. Unit is low cost, no electricity with no moving parts and is essentially maintenance free.

FRIGID-X™ TOOL COOLER APPLICATIONS:

- ▶ Sharpening Tools
- ▶ Routing
- ▶ Machining Plastics
- ▶ Drill and cutter grinding
- ▶ Milling, Drilling, Routing and Surface Grinding
- ▶ Plunge & Form Grinding
- ▶ Setting Hot Melt Adhesives
- ▶ Laser Cutting
- ▶ Tire and Rubber Grinding
- ▶ Band Saw Blade Cooling
- ▶ Chill Roll Nip Cooling

FRIGID-X™ TOOL COOLER SYSTEM - HOW IT WORKS

Compressed air enters at point (A) into the vortex tube component of the tool cooling. The vortex tube splits the compressed air into a cold (B) and hot (C) stream of air. The hot air from the vortex tube is vented to the atmosphere at point (D) after being muffled to reduce noise. Cold air enters into the muffler (E) and then distributed through the hose distribution kit (F) and onto the tool being cooled. A strong magnet (G) holds the tool cooler onto the machine

WHY THE FRIGID-X™ TOOL COOLER OVER OTHERS :

All Metal Parts, Stainless Steel Body. Tests Show Frigid-X™ consistently quieter than competition!

FRIGID-X™ ADJUSTABLE SPOT COOLER ADVANTAGES:

- ▶ No moving parts.
- ▶ Quiet
- ▶ Driven by air not electricity.
- ▶ Small and lightweight - portable.
- ▶ Low in cost compared to most others
- ▶ Superior design and performance
- ▶ Maintenance free operation
- ▶ Made of durable stainless steel and metal arts – no cheap plastic parts
- ▶ Improves production rates and finished part remains dry
- ▶ Prevents burning
- ▶ Improves tolerance control
- ▶ Eliminates coolant costs
- ▶ System uses strong magnetic base

FRIGID-X™ TOOL COOLING SYSTEM

SPECIFICATIONS

Single Point Hose Kit

Double Point Hose Kit

A Model 57025FS Frigid-X™ Tool Cooler is used on a grinding application to reduce the heat and extend wheel life.

A Series of Model 57015FS Frigid-X™ Tool Coolers are used to cool the slitting cutters in a continuously moving paper roll slitting machine.

USE AND SELECTION OF FRIGID-X™ TOOL COOLER

Always use clean, dry compressed air. A manual filter is supplied with every 15 SCFM system and a filter with automatic drain with larger sizes to insure dry air. If oil is a major problem in the compressed air line, an oil removal filter is also recommended. The temperature of the air can be controlled by reducing the pressure using either a regulator or manual shut-off valve. A solenoid valve may also be connected into the machine operation to turn the air supply to the cooling unit on-off as it is needed, thereby conserving compressed air usage.

The tool cooler is available in several capacities - 15, 25, 30, and 40 SCFM in addition, there are two versions - a single point outlet and dual point outlet system.

The Single Point versions are used where a concentrated airflow is needed such as in drilling or grinding. The Dual point versions are used for applications where the heat to be removed is generated over larger surface areas such as in band sawing, milling, application of hot melt adhesives or on chill rolls. One system can be converted to the other by changing hose kits. For most applications the 15 SCFM units are satisfactory but for harder materials such as titanium, or faster machining speeds, the capacities used should be higher. The size depends on the application and an application engineer can assist you in choosing the right model.

MODEL 57015FS

Includes Tool Cooler Single, Point Hose Kit, 3/8" (10mm)
Cone Nozzle, 1-1/4" (32mm)
Fan Nozzle, Filter with Manual Drain

MODEL 57015FD

Includes Tool Cooler, Dual Point Hose Kit,
Two (2) 1/4" (6mm) Cone Nozzle, 1" (25.4mm)
Fan Nozzle, Filter with Manual Drain

MODEL 57025FS, 57030FS, 57040FS

Includes Tool Cooler, Single Point Hose Kit, 3/8" (10mm)
Cone Nozzle, 1-1/4" (32mm)
Fan Nozzle, Filter with Automatic Drain

MODEL 57025FD, 57030FD, 57040FD

Includes Tool Cooler, Dual Point Hose Kit,
Two (2) 1/4" (6mm) Cone Nozzle, 1" (25.4mm)
Fan Nozzle, Filter with Automatic Drain

FRIGID-X™ TOOL COOLING SYSTEM

PART NO.	DESCRIPTION
56015F	Tool Cooler only - 15 SCFM Capacity - Standard Cooling Use
56025F	Tool Cooler only - 25 SCFM Capacity - Higher Cooling Use
56030F	Tool Cooler only - 30 SCFM Capacity - Very High Cooling Use
56040F	Tool Cooler only - 40 SCFM Capacity - Highest Cooling Use
57015FS	Tool Cooling System includes 15 SCFM Tool Cooler plus filter with manual drain and single point hose kit.
57015FD	Tool Cooling System includes 15 SCFM Tool Cooler plus filter with manual drain and dual point hose kit.
57025FS	Tool Cooling System includes 25 SCFM Tool Cooler plus filter with automatic drain and single point hose kit.
57025FD	Tool Cooling System includes 25 SCFM Tool Cooler plus filter with automatic drain and dual point hose kit.
57030FS	Tool Cooling System includes 30 SCFM Tool Cooler plus filter with automatic drain and single point hose kit.
57030FD	Tool Cooling System includes 30 SCFM Tool Cooler plus filter with automatic drain and dual point hose kit.
57040FS	Tool Cooling System includes 40 SCFM Tool Cooler plus filter with automatic drain and single point hose kit.
57040FD	Tool Cooling System includes 40 SCFM Tool Cooler plus filter with automatic drain and dual point hose kit.

ACCESSORIES	
59001	Single Point Hose Kit - includes 3/8" (10 mm) cone nozzle and 1-1/4" (32 mm) fan nozzle
59002	Dual Point Hose Kit - includes two 1/4" (6 mm) cone nozzles and two 1" (25 mm) fan nozzles
90003	Manual filter - 1/4" NPT, 27 SCFM (765 SLPM)
90004	Filter with automatic drain - 1/4" NPT, 43 SCFM (1359 SLPM)
90005	Oil Removal filter with automatic drain, 3/8" NPT, 15 to 37 SCFM (425 to 1048 SLPM)

FRIGID-X™ SUB-ZERO VORTEX™ TOOL COOLING MIST SYSTEM

When lubrication is required as well as cooling, lubricating mist can be reduced and cooling enhanced

WHAT ARE THEY - REASONS TO USE

Heavy coolant can be messy, costly and must be carefully maintained. In addition, dry machining is not always possible due to the need for lubrication or additional cooling that cold air alone cannot provide. The unique patent pending low cost **Frigid-X™ Sub-Zero Vortex™ Tool Cooling Mist System** is ideal for such applications. The unit is comprised of a coolant/lubricant suction system which draws any water based liquid into a specially designed delivery system. This cools the liquid to deliver a very cold fluid “mist” at around 40 degrees F (5 degrees C). This cooling allows for as much as 20% less coolant needed, faster production rates and improved quality.

HOW IT WORKS:

The liquid is cooled by means of a small vortex tube that uses around 5 SCFM (142 SLPM) at a maximum of 50 psig (3.5 bar). Pressure can be adjusted up or down slightly to avoid freezing of the liquid or to get a colder temperature. An adjusting screw controls the level of mist required. Liquid is siphoned into the unit using a long plastic tube connected to the main unit. A heavy duty removable magnet secures the **Sub-Zero Vortex™ Tool Cooling Mist System** onto a machine. The magnet can also be removed and mounting holes may be used to secure the mist system. All you need is the liquid to cool and/or lubricate and a small amount of filtered (clean) compressed air at 50 psig (3.5 bar). No electrical components, no expensive pumps or moving parts except for the adjusting screw assures long life and maintenance free operation.

Frigid-X™ Sub-Zero Vortex™ Advantages

- ▶ No electricity required – simplicity in design
- ▶ low cost
- ▶ reduces coolant/lubricant cost using by less fluid
- ▶ improves safety with less mist
- ▶ no moving parts except for an adjusting screw for the fluid
- ▶ small and lightweight, portable
- ▶ maintenance free operation

Frigid-X™ Sub-Zero Vortex™ Advantages

- ▶ Solid Carbide End Mills
- ▶ wherever lubrication is required in machining
- ▶ when cooling is required beyond the capability of cold air alone

SUB ZERO VORTEX™ TOOL COOLING SYSTEM

MIST COOLANT & LUBRICANT

The Frigid-X™ Sub-Zero Vortex™ Tool Cooling Mist System may use any water based material including water itself. Non-water based materials are not recommended as they may dry and clog the system. If you need a coolant/lubricant material Nex Flow can also supply:

PART NO.	DESCRIPTION
58LUBECOOL-1	Coolant/Lubricant in 4 X1 -gallon case (16 L)
58LUBECOOL-5	Coolant/Lubricant in 5 – gallon pail (20L)

SUB ZERO VORTEX™ TOOL COOLING SYSTEM

PART NO.	DESCRIPTION
58208	Sub Zero Vortex™ Mist Tool Cooling SystemC/w Mist Handling unit, Mini Cooler, Magnet
58008	Mist handling Unit only
99929L	Magnet Only
56008F	Mini Cooler Only

ACCESSORIES

90004	Filter with auto drain
90008	Regulator with guage
90013	Manual Shutoff valve for vortex mini cooler - 1/8" NPT

FRIGID-X™ PANEL COOLER

Prevent downtime due to overheating electric and electronic control panels and cabinets.

FRIGID-X Panel Coolers maintain NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4X (IP 66) integrity and are ULC Listed.

WHAT ARE THEY - REASONS TO USE

Frigid-X™ Panel Cooler and Cabinet Enclosure Cooler for electronic control panels provide a low cost method of both purging and cooling electrical and electronic control panels by using a stainless steel vortex tube to create cold air from ordinary compressed air. Unlike many competitors - all of our coolers are stainless steel, not just the vortex tube, for longer life and flexible use. Frigid-X™ Panel Coolers are compact and can be installed in minutes through a standard electrical knockout. There are virtually no moving parts. Cabinet Enclosure Cooler - Frigid-X™ series are ideal for all NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4X (IP 66) rated panels.

FRIGID-X™ PANEL COOLER ADVANTAGES :

- No moving parts.
- Quiet
- Eliminate fans and blowers and filters
- Low in cost compared to most others
- Superior design and performance
- Maintenance free operation
- Made of durable stainless steel and metal parts -no cheap plastic parts
- Cooling capacities to 2800 BTU/Hr per unit.
- Maintain NEMA 12, NEMA 3R and Patented* NEMA 4-4X integrity (IP 54, IP 24 and IP 66)
- Control and stabilize the temperature and humidity Inside the enclosure
- No CFC's or HCFC's
- Mount in a standard electrical knockout
- Eliminate circuit drift, nuisance tripping and dirt Contamination
- Provide wash down protection (Patented*NEMA 4-4X (IP 66))

WHY THE FRIGID-X™ PANEL COOLER OVER OTHERS :

All Metal Parts, Stainless Steel Body, Quiet, Tests Show Frigid-X™ Panel Cooler Constantly Quieter Than Competition! Our Standard units are good in ambient temperatures up to 150° F (67° C). High temperatures units are available to 200° F (93° C) and higher. Non Hazardous purge units are also available where constant flow is required to purge a control panel but maintain on-off operation to conserve energy. Contact Nex Flow™ or your local representative for details.

FRIGID-X™ PANEL COOLER APPLICATIONS :

- ▶ Programmable controllers
- ▶ System Control Cabinets
- ▶ CCTV Cameras
- ▶ Motor Control Centers
- ▶ Relay Panels
- ▶ CNC Machine controls
- ▶ Computer Panels
- ▶ Laser Housing enclosure cooling
- ▶ Electronic scale cooling
- ▶ Modular Control Centers
- ▶ Food Service Equipment Controls

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

With every Panel Cooler you receive a Free Panel Cooler Temperature Warning Indicator Sticker. It will provide a dual qualitative warning level and danger level if the temperature inside your control cabinet is too high. Use on any control panels you wish to monitor. Extra stickers may be purchased from NexFlow - Part Number 69600.

FRIGID-X™ PANEL COOLER SYSTEM - HOW IT WORKS

Compressed air enters at point (A) into the vortex tube component of the panel cooler. The vortex tube splits the compressed air into a hot (B) and cold (C) stream of air. The hot air from the vortex tube is vented to the atmosphere at point (D) after being muffled to reduce noise. Hot air displaced from inside the control panel or cabinet is exhausted through point (E). Cold air enters into the panel (F) via the cold distribution hose (G). Holes (H) are punched into the hose kit to deliver the cold air inside the panel where required. A muffler (I) further reduces the noise level of the exhausting air.

Leaving a control panel door open to let a fan blow dirty hot air on to the control is hazardous and even illegal in many jurisdictions.

FRIGID-X™ PANEL COOLER SELECTION

Nex Flow™ Frigid-X™ Panel Coolers are available with thermostat control (on-off units) or continuous operation. Continuous systems are best when constant cooling and/or a positive purge of the panel is required. On-off control saves air by activating the unit when the internal temperature approaches a critical level. The adjustable thermostat is factory set at 95 degrees F (35 degrees C). They are best used in applications where heat may fluctuate as in variable speed drives and where a continuous purge is not required. ALL OF OUR UNITS ARE STAINLESS STEEL for long life and flexible environments.

If a constant positive pressure is required with on-off control (Non-hazardous Purge Units) a special solenoid valve can be supplied to allow a small amount of air flow into the control panel when in the closed position. High temperature units for ambient in excess of 150° F (67° C) to 200° F (93° C) and higher are available.

When you find control panel doors open it is a sure sign that you need Frigid-X™ Panel Cooler. Open doors are not only dangerous but also creates dirt buildup on electronics shortening their life.

FRIGID-X™ PANEL COOLER SYSTEMS VERSES OTHER OPTIONS

- ▶ Heat Pipes and air to air heat Exchangers cannot cool below ambient limiting cooling effect. Filters require Monitoring and change to prevent failure.
- ▶ Water cooled heat Exchangers use water which is not compatible with electrics. In addition scale buildup can cause reduced effectiveness over time and downtime for descaling.
- ▶ Refrigerant CFC or HCFC Heat Exchangers are more costly with higher installation cost and lower life expectancy Installation requires a floor drain for condensate. Machine vibration can cause loss of refrigerant and component failure. Average replacement cost of a compressor can be High. Filters require monitoring and change to prevent failure.
- ▶ Frigid-X™ Panel Cooler is low cost, with NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4X (IP 66) Models available. They are compact, easy and fast to install. Thermostatic control minimizes air use to only when needed

Frigid-X™ Panel Coolers are approved by Underwriters Laboratory (ULC Component Recognized) to meet USA and Canadian Standards, and meet CE Regulations and necessary international standards.

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

* A) The BTU/hr (wattage) is calculated with air at 100 PSIG (6.9 Bar) and 70°F (21°C)

B) For temperatures of compressed air between 90°F (32°C) to 100°F (38°C) de-rate the cooling effect by 20% at 100°F (38°C) & above de-rate by 30%

RATINGS EXPLANATION

NEMA TYPE 12 (IP 54) Frigid-X™ Panel Cooler is dust tight and oil tight and used in general industrial environments.

Patented* NEMA TYPE 4-4X (IP 66) Frigid-X™ Panel Cooler is dust, oil-tight, spray resistant and used in environments where there are liquids and for food service and corrosive environments.

NEMA TYPE 3R (IP 24) Frigid-X™ Panel Cooler is used in outdoor service.

MINI PANEL COOLER Models 60004 to 63008X

FRIGID-X™ PANEL COOLER Models 60015 to 63115X

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

FRIGID-X™ HOT AND COLD MUFFLING KITS

Achieve additional noise level reduction utilizing the Frigid-X™ Hot end and Cold End Muffling Kits Combined dbA of up to 8 Decibels

COLD END MUFFLING KIT

The Cold End Muffling Kit consists of a silencer and all necessary fittings to connect to the Panel Cooler at the cold air outlet inside the electrical control panel. Depending on the capacity of the specific Panel Cooler, the dBA reduction offered by the Cold End Muffling Kit is 5 to 6 dBA. Easy to install. Can be installed with the silencer vertical or horizontal depending on the space.

PART NO	DESCRIPTION
69501	Cold End Muffler Kit for 60015A to 63140X
69503	Cold End Muffler Kit for 60004A to 63108X

Cold End Muffler kits for Models for Models 60015A to 63140X (Large Size) and 60004A to 63108X Panel Coolers (Small size)

PART NO	DESCRIPTION
69505	Cold End and Hot End Combination Muffler Kit for 60015A to 63140X
69506	Cold End and Hot End Combination Muffler Kit for 60004A to 63108X

HOT END MUFFLING KIT & HEAT GUARD

The Hot End Muffling Kit consists of an ABS Plastic sleeve with silencing material fitted over the hot end of the Panel Cooler, outside of the control panel. The dBA reduction offered by the Hot End Muffling Kit is 2 dBA. Easy to install just fit over the top of the Panel Cooler. In addition to noise reduction it offers additional protection from the hot end of the Panel Cooler.

PART NO	DESCRIPTION
69502	Hot End Muffler Kit for 60015A to 63140X
69504	Cold End Muffler Kit for 60004A to 63108X

Hot End Muffler kits for Models for Models 60015A to 63140X (Large Size) and 60004A to 63108X Panel Coolers (Small size)

SMART N CLEVER™
MORE THAN INTELLIGENT

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER

Prevent Downtime due to overheating electric and electronic control panels and cabinets with Frigid-X™ Panel Coolers combined with the Hot and Cold End Muffling Kits for Quiet Operation Maintain NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4x (IP 66) Integrity - ULC Listed

WHAT ARE THEY - REASONS TO USE COMBINED WITH THE HOT AND COLD END MUFFLING KITS, THE SILENT X-STREAM™ PANEL COOLER CAN REDUCE NOISE LEVELS TO 64 dBA OR MORE.

Frigid-X™ Panel Cooler and Cabinet Enclosure Cooler for electronic control panels provide a low cost method of both purging and cooling electrical and electronic control panels by using a stainless steel vortex tube to create cold air from ordinary compressed air. Unlike many competitors - all of our coolers are stainless steel, not just the vortex tube, for longer life and flexible use. Frigid-X™ Panel Coolers are compact and can be installed in minutes through a standard electrical knockout. There are virtually no moving parts. Cabinet Enclosure Cooler - Frigid-X™ series are ideal for all NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4X (IP 56) rated panels.

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER ADVANTAGES :

- No moving parts.
- Put Extra Quiet
- Eliminate fans and blowers and filters
- Low in cost compared to most others
- Superior design and performance
- Maintenance free operation
- Made of durable stainless steel and metal parts -no cheap plastic parts
- Cooling capacities to 2800 BTU/Hr per unit.
- Maintain NEMA 12, NEMA 3R and Patented* NEMA 4-4X integrity (IP 54, IP 24 and IP 66)
- Control and stabilize the temperature and humidity Inside the enclosure
- No CFC's or HCFC's
- Mount in a standard electrical knockout
- Eliminate circuit drift, nuisance tripping and dirt Contamination
- Provide wash down protection (Patented* NEMA 4-4X (IP 66))

WHY THE SILENT X-STREAM™ FRIGID-X™ PANEL COOLER OVER OTHERS:

The Panel Cooler itself is All Metal Parts, Stainless Steel Body, Extra Silenced using the Hot End Muffling Kit of ABS Plastic and Silencing material and a Cold End Silencer inside the Electrical Panel. Our Silent X-Stream units are good in ambient temperatures to 150 degrees F (67 degrees C.) Non-Hazardous purge units are also available where constant flow is required to purge a control panel but maintain on-off operation to conserve energy. Contact Nex Flow™ or your local representative for details.

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER APPLICATIONS:

- ▶ Computer Rooms
- ▶ Environments where Cooler Panels are in close proximity to Personnel
- ▶ When General Noise Reduction is Desired or Necessary

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER SYSTEM - HOW IT WORKS

Compressed air enters at point (A) into the vortex tube component of the Panel Cooler. The vortex tube splits the compressed air into a hot (B) and cold (C) stream of air. The hot air from the vortex tube is vented out of the metal sleeve and down the hot end muffler and out at (D) after additional muffling. Hot air displaced from the inside of the control panel is exhausted through point (E). Cold Air enters into the panel (F) via the Cold End Muffler and hose distribution kit (G). Holes (H) are punched into the hose kit to deliver the cold air inside the panel where required. A muffler (I) further reduces the noise level of the exhausting air.

Leaving a control panel door open to let a fan blow dirty hot air on to the control is hazardous and even illegal in many jurisdictions.

When you find control panel doors open it is a sure sign that you need Frigid-X™ Panel Cooler. Open doors are not only dangerous but also creates dirt buildup on electronics shortening their life.

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER

- ▶ Heat Pipes and air to air heat Exchangers cannot cool below ambient limiting cooling effect. Filters require Monitoring and change to prevent failure.
- ▶ Water cooled heat Exchangers use water which is not compatible with electrics. In addition scale buildup can cause reduced effectiveness over time and downtime for descaling.
- ▶ Refrigerant CFC or HCFC Heat Exchangers are more costly with higher installation cost and lower life expectancy. Installation requires a floor drain for condensate. Machine vibration can cause loss of refrigerant and component failure. Average replacement cost of a compressor can be High. Filters require monitoring and change to prevent failure.
- ▶ Frigid-X™ Panel Cooler is low cost, with NEMA Type 12 (IP 54), NEMA Type 3R (IP 24) and Patented* NEMA Type 4-4X (IP 66) Models available. They are compact, easy and fast to install. Thermostatic control minimizes air use to only when needed

SILENT X-STREAM™ FRIGID-X™ PANEL COOLER

Nex Flow™ Frigid-X™ Panel Coolers are available with thermostat control (on-off units) or continuous operation. Continuous systems are best when constant cooling and/or a positive purge of the panel is required. On-off control saves air by activating the unit when the internal temperature approaches a critical level. The adjustable thermostat is factory set at 95 degrees F (35 degrees C). They are best used in applications where heat may fluctuate as in variable speed drives and where a continuous purge is not required. ALL OF OUR UNITS ARE STAINLESS STEEL for long life and flexible environments.

If a constant positive pressure is required with on-off control (Non-hazardous Purge Units) a special solenoid valve can be supplied to allow a small amount of air flow into the control panel when in the closed position. High temperature units for ambient in excess of 150° F (67° C) to 200° F (93° C) and higher are available.

Frigid-X™ Panel Coolers are approved by Underwriters Laboratory (ULC Component Recognized) to meet USA and Canadian Standards, and meet CE Regulations and necessary international standards.

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

NEMA TYPE 3R (IP 24) Frigid-X™ Panel Cooler is used in outdoor service.

* A) The BTU/hr (wattage) is calculated with air at 100 PSIG (6.9 Bar) and 70°F (21°C)

B) For temperatures of compressed air between 90°F (32°C) to 100°F (38°C) de-rate the cooling effect by 20% at 100°F (38°C) & above de-rate by 30%

THE NEW ELC ELECTRONIC CONTROL DIGITAL THERMOSTAT

The ELC (Electronic Control Digital Thermostat) is a way for precise control of one or two New Flow™ Frigid-X Panel Coolers. Far more accurate and elegant than using a standard thermostat and with flexible use.

SPECIFICATIONS:

- ▶ **Supply voltage** : AC 120-240V (24V on request)
- ▶ **Sampling rate** : 4/ sec (almost double that of our nearest competitor)
- ▶ **Accuracy** : 0.25% of full scale (under 10% of a degree)
- ▶ **3 Outputs** : 2 Relay outputs and one with PID, 1 SSR output with PID to control external SSR
- ▶ -50°C to + 100°C measuring range
- ▶ It has two Alarm settings for the two output relays so you can set two different temperatures to control two separate solenoids for two separate coolers (and can be used to control anything else electrical)
- ▶ Auto tune mode for quick set ups
- ▶ Patented* NEMA Type 4-4X Enclosure (ABS/PC), ULC approved- it is accepted anywhere in the world
- ▶ Standard unit comes with one solenoid valve
- ▶ Fahrenheit or Centigrade and easily switchable back and forth
- ▶ It can be used in conjunction with the new PLCFC Optimization system for special applications such as cooling parts on a conveyor or in a tunnel, to control cooling and to index movement of the parts being conveyed (See Section A).

ELC Electronic Control Digital Thermostat

With every Panel Cooler you receive a Free Panel Cooler Temperature Warning Indicator Sticker. It will provide a dual qualitative warning level and danger level if the temperature inside your control cabinet is too high. Use on any control panels you wish to monitor. Extra stickers may be purchased from NexFlow - Part Number 69600.

CALCULATING HEAT LOAD IN YOUR ELECTRICAL/ELECTRONIC PANEL ENCLOSURE:

Useful terms and conversions :

- ▶ 1 BTU/hr = 0.293 watts ▶ 1 horsepower = 2544 BTU/hr ▶ 1 Square Foot = 0.0929 square meters
- ▶ 1 BTU/hr - 0.000393 horsepower ▶ 1 Watt = 0.00134 horsepower ▶ 1 Square Meter = 10.76 square foot
- ▶ 1 Watt = 3.415 BTU/hr

Typical fan capacity :

- ▶ 4" fan: 100 CFM (2832 LPM) ▶ 8" fan: 340 CFM (9628 LPM)
- ▶ 6" fan: 220 CFM (6230 LPM) ▶ 10" fan: 550 CFM (15574 LPM)

Total heat load consists of the heat transfer from outside your panel and from the heat dissipated inside the control unit.

BTU/hr cooling effect from fan $1.08 \times (\text{temp. inside panel in } ^\circ\text{F} - \text{temp. outside panel in degrees F}) \times \text{CFM}$

Watts cooling effect from fan: $0.16 \times (\text{temp. inside panel in } ^\circ\text{C} - \text{temp. outside panel in degrees C}) \times \text{LPM}$

CALCULATING BTU/hr OR Watts:

1. Determine the heat generated inside the enclosure. Approximations may be necessary. For example, if you know the power generated inside the unit, assume 10% of the energy is dissipated as heat.
2. For heat transfer from the outside, calculate the area exposed to the atmosphere except for the bottom of the control panel.
3. Choose the internal temperature you wish to have, and choose the temperature difference between it and the maximum external temperature expected.
4. From the conversion table that follows, determine the BTU/hr per square foot (or watts per square meter) for the temperature difference.
5. Multiply the panel surface area times the BTU/hr per square foot (or watts per square meter) to get the external heat transfer in BTU/hr or in watts.
6. Sum the internal and external heat loads calculated.
7. If you do not know the power used in the enclosure but you can measure temperatures, then measure the temperature difference between the outside at current temperature, and the present internal cabinet temperature.
8. Note size and number of any external fans. Provide this information to Nex Flow™ to assist in sizing the appropriate cooling system.

Temperature Difference In $^{\circ}\text{F}$	BTU/hr/sq. Ft.	Temperature Difference In $^{\circ}\text{C}$	Watts/sq. meter
5	1.5	3	5.2
10	3.3	6	11.3
15	5.1	9	17.6
20	7.1	12	24.4
25	9.1	15	31.4
30	11.3	18	39.5
35	13.8	21	47.7
40	16.2	24	55.6

Example :

The control panel has two frequency drives totaling 10 horsepower and one module rated at 100 watts. The maximum outside temperature expected is 105°F or 40.5°C. The area of the control panel exposed sides, except for the top is 42 square feet or 3.9 square meters. We want the internal temperature to be 95°F or 35°C.

Total internal power is 10 hp x 746 watts/hp - 7460 plus 100 watts = 7560 watts.

Assume 10% forms heat = an internal heat load of 756 watts

Total internal power is 10 hp x 2544 BTU/hp = 25440 BTU/hr plus 100 watts x 3.415 BTU/hr/Watt = 25782 BTU/hr

Assume 10% forms heat = an internal heat load of 2578 BTU/hr

External heat load: The temperature difference between the desired temperature and the outside is 10°F or 5.5°C. Using the conversions (and interpolating where necessary) we multiply the area by the conversion factor:

42 sq. ft x 3.3 - 139 BTU/hr or 3.9 sq. m x 10.3 = 40 Watts

Total Heat Load: 756 + 40 - 796 watts or 2578 + 139 - 2717 BTU/hr

You would use a Model 61040 for constant operation or a Model 63040 for one-off control. (Rated at 2900 BTU/hr or 849 Watts).

IMPORTANCE OF FILTRATION, HOSE DISTRIBUTION KIT, SEALING & MOUNTING

All Nex Flow™ Frigid-X™ Panel Cooler systems are supplied with a 5 micron filter c/w automatic float type drain and a hose distribution kit. The hose kit comes complete with a length of flexible vinyl clear tube which is used to direct the cold air to hot spots in the enclosure and to circulate the cold air. Clamps to hold the tubing and a silencing muffler, also supplied, are supplied along with adhesive backed clips to hold the tubing in place. The hose kit and muffler further reduce noise levels but also act as an emergency trap for moisture should the filter fail or any reason, protecting your enclosure controls. The filter protects against moisture and in fact stops all moisture from entering the control panel. The air entering the panel goes from high pressure to near atmospheric conditions and will stabilize at 45% relative humidity. For this reason, Nex Flow™ Frigid-X™ Panel Cooler systems are usable for humidity control as well as cooling - truly an "air conditioner". If there is a potential for oil in the air lines our Model 90005 oil removal filter (to 0.3 micron) is recommended. Nex Flow™ Frigid-X™ Panel Coolers should be mounted on the top or side (using our side mount kits) but near the top as much as possible. All panel coolers should be mounted vertical as well.

HOSE DISTRIBUTION KIT for Medium Size Panel Coolers Models 60015A to 63140X

HOSE DISTRIBUTION KIT for Small Size Panel Coolers Models 60004A to 63108X

With every Panel Cooler you receive a Free Panel Cooler Temperature Warning Indicator Sticker. It will provide a dual qualitative warning level and danger level if the temperature inside your control cabinet is too high. Use on any control panels you wish to monitor. Extra stickers may be purchased from NexFlow - Part Number 69600.

SOLENOID VALVE AND THERMOSTAT

Nex Flow™ Frigid-X™ Panel Cooler systems are available with a standard 2-way normally closed solenoid valve and thermostat kit Model 90015 (120V) or Model 90016 (230V). This limits the flow of air only when required. The thermostat is factory set at 95 degrees F (35 C) and will normally hold +/- 2 degrees F (1 C) inside the enclosure. It is rated 24V-240V, 50/60 hz. UL recognized and CSA approved.

Thermostat and Solenoid Valve Kit : The kit comes complete with a solenoid valve, thermostat and a resistor. The resistor is included should you encounter rapid temperature fluctuations in the control panel causing the solenoid to cycle on and off too quickly (chattering). The resistor is installed (if needed) across the leads of the thermostat and prevents chattering by dampening the thermo switch sensitivity.

With every Panel Cooler you receive a Free Panel Cooler Temperature Warning Indicator Sticker. It will provide a dual qualitative warning level and danger level if the temperature inside your control cabinet is too high. Use on any control panels you wish to monitor. Extra stickers may be purchased from NexFlow - Part Number 69600.

SMART N CLEVER™
MORE THAN INTELLIGENT

Continuous cooling system with cooler, filter with auto drain and hose distribute Kit.

ON-OFF PANEL COOLING SYSTEM with cooler, filter with auto drain and hose distribution kit, thermostat and solenoid valve.

FOR TIGHT SPACES - USE OUR SIDE MOUNT KITS

The Nex Flow™ Frigid-X™ Panel Cooler systems are normally mounted on the top of the enclosure but if space does not permit, you can utilize the Side Mount Kits. Made of stainless steel for NEMA 12(IP 54), NEMA 3R(IP 24) or Patented* NEMA 4-4X(IP 66) environments, they are designed for use with all Frigid-X™ Panel Coolers. Two sizes are available – one for coolers 8 SCFM and under capacity and the other for the larger size coolers. Slim design to minimize space even when mounted on the side of a

panel.

EASY MOUNT
PANEL COOLER
SIDE MOUNT

SIZE	Ø A	Ø B
Medium Cooler	3/4" NPS THRD.	0.50"(12.5mm)
Small Cooler	1/2" NPS THRD.	0.30"(8.0mm)

Easy Mount Side Mount are available for the small & medium size Panel Coolers to allow mounting to the side of an enclosure if space prevents mounting on the top. It is a “plug and play” system

On-Off type Panel Cooling system is installed on the Control Panel of a CNC machine. This system turns on only when temperature in panel exceeds the preset level. This system keeps the panel cool, purged and free of dust.

Just screw the Panel Cooler into the Easy Mount Side Mount which is first attached to the enclosure. Then attach hose kit to the brass connection on the side mount. Easy!!!

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

*US patent number 8,616,010. Other countries: Patented or Patent Pending.

Convert your FRIGID-X™ PANEL COOLER into a “CONSTANT PURGE” System legally and easily with the FRIGID-X™ PANEL COOLER BY-PASS SYSTEM

WHAT ARE THEY - REASONS TO USE

In very dirty environments, you may want continue to have a small amount of compressed air entering the control panel when the panel cooler is not operating (turned off utilizing a solenoid and thermostat package). This is a **“constant purge” system**. One way to do this is to drill a small hole in the solenoid valve but that would be illegal in many jurisdictions or at least against many corporate policies since that would compromise the tested electrical approval integrity of the solenoid. In addition, larger control panels many need to be “purged” with more air flow and small panels only require a negligible amount.

The **FRIGID-X™ PANEL COOLER BY-PASS SYSTEM** accomplishes both tasks. It is easily installed across the solenoid valve to allow for the bypass of some air flow. A control valve on the bypass sets the level of flow desired for the particular control panel where it is utilized. Simple, easy and reliable

The **FRIGID-X™ PANEL COOLER BY-PASS SYSTEM** is made of 316L stainless steel components to handle difficult environments and can be used on all NEMA 12 (IP 52), NEMA 3R (IP 24) and NEMA 4-4X (IP 66) classed applications. The system is easily adjustable for the amount of purge flow you want or need depending on the size of control panel and reliable.

The **FRIGID-X™ PANEL COOLER BY-PASS SYSTEM** allows constant purging with compressed air of a control panel, even when the **FRIGID-X™ PANEL COOLER** is not operating and zero air is flowing through the **PANEL COOLER**.

The **FRIGID-X™ PANEL COOLER BY-PASS SYSTEM** consists of 316L stainless steel parts to withstand difficult factory environments and can be used on all classifications of Nex Flow™ **FRIGID-X™ PANEL COOLERS**.

PART NO	DESCRIPTION
69700	Bypass system consists of 316L Stainless steel tee and 316L Stainless steel combination tee and flow control valve connected together with a stainless bypass stainless hose.

Nex Flow™ Offers Pneumatic Accessories to help reduce noise levels and improve the environment as well for better operation of product.

Nex Flow™ and their master distributors and agents worldwide offer and use in the systems:

- Filters with Auto Drains
- Regulators with Gauges
- Solenoid Valves
- Shutoff Valves
- Compressed Air Fittings Hoses
- and other products to provide one stop shopping

These products are listed as follows (specifications may vary from one country to the next):

PART NO.	DESCRIPTION
10991X1 to 10994X2	Mounting System for X-Stream Air Blade Air Knives – See Page M3
10991A1 to 10992A1	Mounting System for Standard Air Blade Air Knives – See Page M3
AMMS to 40002MTS-MS	Mounting System for Air Amplifiers – See Page M3
46002	Two port Manifold for Standard Flow – See Page M7
46002HF	Two port Manifold for High Flow – See Page M7
46004	Four port Manifold for Standard Flow– See Page M7
46004HF	Four port Manifold for High Flow– See Page M7
49400	Temperature Warning Label Sticker for Control Panels – See Page M10
46006	Six port Manifold for Standard Flow– See Page M7
46006HF	Six port Manifold for High Flow– See Page M7
90001	3/8" Filter with Auto drain, 5 micron, 65 SCFM plastic bowl with guard
90002	3/4" Filter with Auto drain, 5 micron, 220 SCFM metal bowl with site glass
90003	1/4" Filter with Manual drain, plastic bowl, 27 SCFM
90004	1/2" Filter with Auto drain, 5 micron, 43 SCFM , plastic bowl
90005	3/8" Oil Removal Filter with Auto drain, 37 SCFM
90006	3/4" Oil Removal Filter with Auto drain, 150 SCFM
90007	NEMA 4X Filter with Auto drain, 5 micron, 1/4" NPT
90008	1/4" Regulator with Gauge, 50 SCFM
90009	3/4" Regulator with Gauge, 220 SCFM
90011	Gauge only, 1/4" NPT 0 - 160 psig
90012	Manual Valve 1/4" NPT
90015	Thermostat & Solenoid Valve Kit (90017+90020) - 120V
90016	NEMA 4-4X Thermostat & Solenoid Valve Kit (90017+90018) - 120V
90017	Thermostat Only
90018	NEMA 4-4X Solenoid Valve Only (120 V)
90019	24 V Solenoid Valve, 1/4" NPT (40 SCFM)
90020	120 V Solenoid Valve, 1/4" NPT (40 SCFM)
90021	240 V Solenoid Valve, 1/4" NPT (40 SCFM)
90023	Gauge only, 1/8" NPT 0 - 160 psig
90101	X-Stream Super Separator NF 200 - 9 SCFM complete with Auto Drain 1/4" See Page M9
90102	X-Stream Super Separator NF 500- 22 SCFM complete with Auto Drain 1/4" See Page M9

PART NO.	DESCRIPTION
90103	X-Stream Super Separator NF 1500 - 64 SCFM complete with Auto Drain 1/2" See Page M9
90024	NEMA 4-4X Solenoid Valve Only (220V)
90027	Oil Removal Filter, 1/4" NPT (Up to 24 SCFM)
90029	Magnetic Swivel Base. See Page M11
90029A	Mini Shut off valve for Magnetic Swivel Base. See Page M11
90034	Medium Size Solenoid Valve, 120V, 1/2" NPT, 100 SCFM
90035	Medium Size Solenoid Valve, 240V, 1/2" NPT, 100 SCFM
90036	Large Size Solenoid Valve, 120V, 1/2" NPT, 200 SCFM
90037	Large Size Solenoid Valve, 240V, 1/2" NPT, 200 SCFM
90038	ELC CONTROL - 110V for Panel Coolers-include Solenoid Valve. See Page M11
90039	ELC CONTROL - 220V for Panel Coolers-include Solenoid Valve. See Page M11
90040	Foot Valve, 1/4" NPT, 60 SCFM
90044	Thermostat & Solenoid Valve Kit (90017+90021) - 240V
90045	NEMA4-4X Thermostat & Solenoid Valve Kit, 240V (90024 + 90017)
90052	1/8" NPT Stainless Steel Swivel Fitting. See Page M11
90053	1/4" NPT Stainless Steel Swivel Fitting. See Page M11
90068	3/8" NPT Stainless Steel Swivel Fitting. See Page M11
90069	1/2" NPT Stainless Steel Swivel Fitting. See Page MN11
90070	1/8" NPTM Reclassifier Muffler. See Page M12
90071	1/4" NPTM Reclassifier Muffler. See Page M12
90072	3/8" NPTM Reclassifier Muffler. See Page M12
90073	1/2" NPTM Reclassifier Muffler. See Page M12
90074	3/4" NPTM Reclassifier Muffler. See Page M12
90075	1" NPTM Reclassifier Muffler
91018	Solenoid for Purge Control Panel Coolers - NEMA 12
91019	Solenoid for Purge Control Panel Coolers - NEMA 4-4X
91020	Spare Capacitor for Thermostat
6RF (MM / MF)	Stainless Steel Rigid Flex Hose which can be flexed to a shape. See Page M13
12RF (MM / MF)	Stainless Steel Rigid Flex Hose which can be flexed to a shape. See Page M13
18RF (MM / MF)	Stainless Steel Rigid Flex Hose which can be flexed to a shape. See Page M13

NEX FLOW™ MOUNTING SYSTEM FOR AIR BLADE AIR™ KNIVES & AMPLIFIERS – Flexible and Durable

WHAT THEY ARE – REASONS TO USE

Nex Flow™ Mounting Systems for air knives and amplifiers provide a convenient and flexible way to utilize the products for blow-off and cooling applications. All **Mounting Systems** are made of powder coated steel. One knob controls the infinite flexibility of the system and secures it in place after the air knife or amplifier is properly positioned. Optional magnetic base can secure it to a magnet accepting platform. Rugged and secure positioning.

MOUNTING SYSTEM FEATURES

- Flexible and Durable
- Easy to use and install
- Powder Coated Steel
- Optional Magnetic Base

MOUNTING SYSTEM BENEFITS

- Infinite flexibility
- Designed for Factory Environments

NEX FLOW™ MOUNTING SYSTEM FOR AIR BLADE AIR™ KNIVES & AMPLIFIERS – Flexible and Durable

Secure air knives in place quickly and easily with precision mounting.

Air Blade™ Air Knife System comes complete with powder coated brackets and stainless steel mounting screws along with the mounting unit itself. Optional magnetic base, otherwise can secure by threading to a surface.

Air Amplifiers can also be securely and accurately placed using the Nex Flow™ mounting systems.

Standard Model AM10, AM20, and AM40 as well as adjustable Model 40001, and 40002 Air Amplifiers can also be mounted using the mounting arm. As with the Air Blade™ Air Knife System an optional magnetic base can be provided or the unit can be secured by threading to a surface.

NEX FLOW™ MOUNTING SYSTEM FOR AIR BLADE AIR™ KNIVES & AMPLIFIERS – Flexible and Durable

MOUNTING SYSTEMS FOR X-STREAM AIR BLADES

PART NO.	DESCRIPTION
10991X1	System for 6" to 18" aluminum and 6" to 15" stainless steel - NF60003 + Bracket + screws
10991X2	TWO systems for aluminum 24" to 54" - 2 sets NF60003 + 2 Brackets + screws
10992X1	System for 18" stainless steel - DG60003 + Bracket + screws
10992X2	TWO Systems needed for 24" to 36" stainless steel - 2 sets DG60003 + 2 Brackets + screws
10993X2	TWO Systems for 42" to 48" stainless steel - 2 sets MG60003 + 2 brackets + screws
10994X2	TWO Systems for 54" stainless steel - 2 sets MG70003 + 2 brackets + screws

MOUNTING SYSTEMS FOR STANDARD AIR BLADES

10991A1	System for 6" to 18" aluminum and 6" to 15" stainless steel- NF60003 + Bracket + screws
10991A2	TWO systems for aluminum 24" to 54" - 2 sets NF60003 + 2 Brackets + screws
10992A1	System for 18" stainless steel - DG60003 + Bracket + screws
10992A2	TWO Systems needed for 24" to 36" stainless steel - 2 sets DG60003 + 2 Brackets + screws
40001MTS-MS	System for 40001 and 40001G and 40001S- NF60003 + 40001MTS + screw
40002MTS-MS	System for 40002 and 40002G and 40002S - NF60003 + 40001MTS + screw

MOUNTING SYSTEMS FOR AIR AMPLIFIERS

AMMS	System for AM10, AM20, AM40 - NF60003 + screw
------	---

OPTIONAL ITEMS

PART NO.	DESCRIPTION
DG0036-AD6060	Optional mounting magnet for Air Blade Mounting System 10991X1, 10991X2 (Need two for 10991X2) and 10992X1 and 10992X2 (need two for 10992X2) And for Air Amplifier Mounting System
DG0036-AD8080	Optional mounting magnet for Air Blade Mounting Systems 10993X2 and 10994X2 (Need two for 10993X2 and 10994X2)
NF60003	Mounting arm only for 10991X1 and 10991X2 and for AMMS, 40001MTS-MS and 40002MTS-MS
DG60003	Mounting arm only for 10992X1 and 10992X2
MG60003	Mounting arm only for 10993X2
MG70003	Mounting arm only for 10994X2
10999X	Bracket Only for Air Blades plus Screws (5)
10998X	Screws Only (5 screws per kit) for air Blades - EACH
10997X	Bracket Only for X-stream air blade
10999	Bracket for Standard Air Blade (on special order) plus screws (5)
10997	Bracket Only for Standard air blade
MS	Spare Screw for Amplifier Mounting System
40001MTS	Mounting Bracket for Model 40001, 40001G and 40001S
40002MTS	Mounting Bracket for Model 40002, 40002G and 40002S

Nex Flow™ - MANIFOLD SYSTEM FOR NOZZLES & JETS

MANIFOLDS FOR MOUNTING OF MULTIPLE NOZZLES, OR AIR JETS & FLAT JETS/AIR EDGERS™.

Easy to assemble and mount for use with Nex Flow™ blow-off nozzles, jets and Air Edger™ flat jets for blow of various lengths

WHAT THEY ARE – REASONS TO USE

Nex Flow™ Manifolds are a convenient way to mount rows of multiple nozzles, air jets and other small blow off products to dry, clean or cool wider surfaces. Come complete with mounting holes. All **Manifolds** are available with air inlet connections at the ends and rear. For smaller air flows, you may use one end connection or rear connection. For larger flows, you need to utilize the two end connections.

Two basic **Manifold** sizes are available with three versions for each: Two (2) outlet unit, Four (4) outlet unit and Six (6) outlet unit. There is the Standard Flow Size and for high flows, the High Flow Size for each version. A flow guide is provided for each version and size.

Manifolds may be held in place with the compressed air piping or by using the mounting holes on the units.

MANIFOLD SYSTEM FEATURES

- Comes in three sizes
- Easy to use and install
- Flexible in use – multiple air inlets

MANIFOLD SYSTEM BENEFITS

- Allows to easily apply nozzles, jets or other blow off products in rows
- Saves time in installation

Nex Flow™ - MANIFOLD SYSTEM FOR NOZZLES & JETS

MANIFOLD SYSTEM - HOW IT WORKS

Nex Flow™ Manifolds come with two (2), four (4) or six (6) – 1/4" outlets. You can use any combination of nozzles, air jets or **Air Edgers™** to make a row of blow off product. Easy to mount with compressed air piping or by using the mounting holes supplied.

PART NO.	DESCRIPTION
46002	Two outlet Aluminum Anodized Manifold - total flow to 80 SCFM @ 80 PSIG
46004	Four outlet Aluminum Anodized Manifold - total flow to 140 SCFM @ 80 PSIG
46006	Six outlet Aluminum Anodized Manifold - total flow to 220 SCFM @ 80 PSIG
46002HF	Two outlet Aluminum Anodized Manifold - total flow to 120 SCFM @ 80 PSIG
46004HF	Four outlet Aluminum Anodized Manifold - total flow to 210 SCFM @ 80 PSIG
46006HF	Six outlet Aluminum Anodized Manifold - total flow to 320 SCFM @ 80 PSIG

NOTE: Using one air inlet allows for 50% of rated flow – using both end air inlets allows for up to 100% of rated flow.

X-Stream™ Liquid Super Separator

Element Free Pneumatic Liquid Separator

Newly developed "Liquid Super Separator" is a new concept of a pneumatic mist remover without filter element. The "Element Free Pneumatic Water Separator" uses a special centrifugal technique with "radial multi-nozzles" that is world patent pending and makes it possible to reject liquid mist (water and oil) to 99.9%! This pneumatic mist separator is virtually maintenance free, as there is no need to replace any filter element. A standard traditional filter with an element and automatic drain may be placed downstream to control micron size but the high liquid and mist removal of the separator will keep it clean and it may not require element replacement for an extended period of time. Maintains extremely low pressure drop.

Features:

- ▶ No filter element
- ▶ Minimal pressure drop
- ▶ Maintenance free
- ▶ Complete mist rejection
- ▶ Mist rejection rate : 99.99%
- ▶ Oil mist rejection rate : 99.99%
- ▶ Semi-permanent durability
- ▶ Power free
- ▶ Complete with Auto-drain
- ▶ No performance change over time
- ▶ Trouble free with simple construction
- ▶ Large capacity but compact
- ▶ Low cost

Dimensions: Two standard sizes

NF-200 (9 scfm) NF-1500 (64 scfm)

Specifications

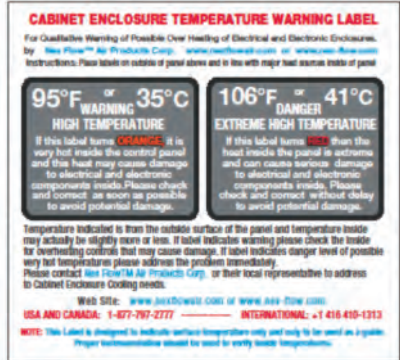

DESCRIPTION	NF-200	NF-1500
Max. operation flow rate SCFM(Nl/min)	9 (200)	64 (1500)
Max. pressure drop (PSIG) (Mpa) {Kgf/cm ² }	3.5 (0-0.025) {0-0.25}	
Operating pressure range (PSIG) (Mpa) {Kgf/cm ² }	140 (0.01-1.0) {1.0-10.2}	
Max pressure before failure(PSIG) (Mpa) {Kgf/cm ² }	172 (1.2) {12.1}	
Fluid temperature range (°F) (°C)	(68 to 140°F) (-20-60°C)	
Type of drain valve	Automatic (can be drained manually)	
Air line connection diameter (inches)	NPT-1/4"	NPT-1/2"
Drain outlet connection diameter (Rc)	1/4 (Ø6.35mm) One touch nipple Type	
Weight (kg)	0.40	1.10
External Dimensions (mm)	Ø55×207	Ø90×305

SPECIALS- high pressure units, manual drain types, super large versions and miniature versions can be requested.

Using The Super Separator

Very large water separators sometimes used upstream to remove liquid but it does not prevent downstream condensation due to the temperature difference between the inside and outside of the compressed air line.

The X-Stream™ Super Liquid Separator is installed at the end of a compressed air main line before a branch line, or just before the outlet of air use for the complete rejection of the mist due to the condensation inside the pipe and also remove any oil mist to 99.9%. This makes it possible to get an essentially maintenance free operation in the control of water and moisture in air line. The only possible part change would be the replacement of the auto drain valve giving the unit a semi permanent life time.

With every Panel Cooler you receive a Free Panel Cooler Temperature Warning Indicator Sticker. It will provide a dual qualitative warning level and danger level if the temperature inside your control cabinet is too high. Use on any control panels you wish to monitor. Extra stickers may be purchased from NexFlow - Part Number 69600.

MAGNETIC BASE

The Nex Flow™ Magnetic Base is used where the air operated product is required to be frequently moved. The extra strong Magnet allows for flexible Mounting, whether vertical or horizontal. Optional mini shut-off valve can be supplied.

PART NO.	DESCRIPTION
Model 90029	Single Outlet Swivel Magnetic Base - 1/4" NPT
Model 90029A	Mini Shut-off Valve for Magnetic Swivel Base

ELECTRONIC TEMPERATURE CONTROL FOR PANEL COOLERS

Electronic Thermostat The ELC (Electronic Control Digital Thermostat) is a way for precise control of one or two Nex Flow™ Frigid X™ Panel Coolers.

- ▶ **Supply voltage** : AC 120/240V (24V on request)
- ▶ **Sampling rate** : 4/sec (almost double that of our nearest competitor)
- ▶ **Accuracy** : 0.25% of full scale
- ▶ **3 Outputs** : Two Relay outputs and one with PID, 1SSR output with PID to control external SSR
- ▶ 50 to +100°C measuring range
- ▶ It has Two Alarm settings for the Two output relays so you can set Two different temperatures to control two separate solenoids for two separate coolers (and can be used to control anything electrical)
- ▶ Auto tune mode for quick set ups
- ▶ NEMA 4 Enclosure (ABS/PC), ULC approved- it is accepted anywhere in the world
- ▶ Standard unit comes with one solenoid valve
- ▶ Fahrenheit or Centigrade and easily switchable back and forth

ELC FOR PANEL COOLER

ELC FOR PANEL COOLER

SWIVEL FITTINGS

NEX Flow's High Quality STAINLESS STEEL Swivel Fittings for Air Nozzles, Air Jets, small Air Knives, and Air Amplifiers allow for a 25 degree movement from the center axis (50 degree total movement) to aim and then secure in position the blowoff application.

PART NO.	DESCRIPTION
Model 90052	1/8" Stainless Steel Swivel Fitting
Model 90053	1/4" Stainless Steel Swivel Fitting
Model 90068	3/8" Stainless Steel Swivel Fitting
Model 90069	1/2" Stainless Steel Swivel Fitting

SWIVEL FITTINGS

RECLASSIFYING MUFFLERS

Reclassifying Mufflers provide excellent noise reduction - as much as 35 dBA - and more so than sintered mufflers. In addition they are used to eliminate oil mist.

The exhaust air from valves and cylinders may contain oil mist that can have a negative effect on the health of employees. OSHA standard 29 CFR 1910.10 limits the cumulative exposure to oil mist to 4.32 parts per million (PPM) in any given eight hour work period.

The Reclassifying Muffler we provide uses a patented wrap design for the removable element that separates the oil from the exhausted air virtually trapping all oil in the element. Based on an intake of 50 PPM at 100 PSIG of oil, the exhausted oil mist is reduced to 0.016 PPM. A 1/4" tube can be attached to the bottom reservoir where the oil accumulates to drain it.

Each reclassifying muffler is sized to pass a certain volume of compressed air with minimal restriction to avoid any effect on the operation of cylinder or valve. For cylinders the table below makes the model number easy to choose based on the bore size and stroke of the cylinder.

Muffler needed to Exhaust in ½ second for a cylinder charged to 100 PSIG (6.9 BAR)

STROKE in inches	0.5	1.0	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.0	5.5	6.0

RECLASSIFYING MUFFLER

RECLASSIFYING MUFFLER

RIGID FLEX HOSE

The unique Nex Flow™ RIGID FLEX Hose is an all stainless steel hose that does not break after a few bends like competitive rubber hoses with simple copper inserts. It is resistant to creep and crimping. Its all stainless construction allows is use in any difficult environment.

The Nex Flow™ RIGID FLEX Hose is used to flex, direct and then hold in place air nozzles, air jets and other small blow off products such as our Model 40001 adjustable air amplifier and 3" X-Stream™ Air Blade™ Air Knife. The RIGID FLEX Hose can also be used with liquid spray jets.

The rigid flex hose is available in three different sizes 6" (152 mm), 12" (304 mm) and 18" (457 mm) and in two configurations - 1/4" male NPT welded end connection both ends or 1/4" male NPT welded connection one end and female NPT welded connection other end.

Rigid-Flex Hose used to mount an aim a Model 47010 air nozzle and connected at the other end to the Magnetic Base creating a portable blow off station.

Rigid-Flex Hose comes in Three sizes 6" (152 mm), 12" (304 mm), 18" (457 mm) and two configurations 1/4" Male Male or 1/4" Male Female Threads.

PART NO.	DESCRIPTION
6RF MM	6" overall length 1/4" NPT male to 1/4" NPT male connections
6RF MF	6" overall length 1/4" NPT male to 1/4" NPT female connections
12RF MM	12" overall length 1/4" NPT male to 1/4" NPT male connections
12RF MF	12" overall length 1/4" NPT male to 1/4" NPT female connections
18RF MM	18" overall length 1/4" NPT male to 1/4" NPT male connections
18RF MF	18" overall length 1/4" NPT male to 1/4" NPT female connections

AIR AMPLIFICATION EXPLAINED AND HOW IS IT MEASURED

THE HONEST APPROACH TO COMPRESSED AIR BLOW OFF AND COOLING

The industry providing air amplification technology consists of few producers of any consequence and many small firms producing often poor quality or cheap knock-offs with little in-house technical support or knowledge. The technology may seem relatively simple as a concept but it is not always easy to maintain a high quality product.

What is even more important is the technical support that is provided and accurate verifiable data that a designer and user can apply confidently. Nex Flow™ Air Products Corp. attempts to provide the necessary education, support and “verifiable” data the customer needs. Always be wary of data provided when it seems unreasonable (and unverifiable), and especially when you see the data just copied from one source to the next with no explanation of what it means when they may not even have produced any in house tests.

WHAT IS AIR AMPLIFICATION ?

Air amplifiers, also called air movers, are energy “converters”. They convert the higher pressure of compressed air (usually between 60 to 120 PSIG or 4 to 6 bar) to a high flow rate at lower pressure utilizing the “Coanda effect”. The Coanda effect is the tendency of a jet of fluid (in this case air) to stay attached to an adjacent curved surface that is very well shaped. The principle was named after aerodynamics pioneer Henri Coanda. It does not create energy from nothing. It “converts” energy and would probably be better called an energy converter. Some results of this effect are much less energy loss from pressure drop, lower noise levels in air flow, and a high velocity “laminar” flow. This allows for a more efficient and strong blowoff force and cooling effect than if the compressed air exited a simple hole or nozzle not using the coanda effect. The larger the amplifier physically, the more efficient it becomes as a flow amplifier. This is why nozzles are not as efficient as larger Air Jets and annular amplifiers.

HOW IS AIR AMPLIFICATION MEASURED ?

Before you can assess “how much” air amplification is (also called the “amplification ratio”), you need to know how it can be measured. In addition to air amplification due to the coanda effect, there is “additional” air amplification downstream of the entrained air caused by the “coanda” angles. For our Standard Air Amplifiers, actual tests were done utilizing a complex testing rig consisting of orifice plates and manometer tubes and a tubular fixture with an anemometer that measured output velocity. The velocity was measured at the exit and downstream after air entrainment. The velocity figure as measured at the exit “before” downstream entrainment is significantly higher as the entrainment will slow down the velocity dramatically. The amplified air from the “coanda effect” is amplified many times in increasing volume as you move further downstream away from the amplifier outlet. At even a small 6” distance away, the amplification ratio can go up approximately by a factor of 3. These measurements must be made under standard conditions because, if the entrained air is warmer, it will actually move faster and the amplification ratio and velocities could be greater. So realistically, the “air amplification” ratio is always a gross estimate in real life applications. Similar logic should be used on published velocity figures. You may measure a velocity figure of 5000 feet per minute and see a published figure several times that number but it may only be an approximation or estimation “before” considering downstream entrainment. Nex Flow™ provides only verifiable data that can be used. The measured and verifiable figure is the most useful and realistic. Be very wary of extremely high velocity claims that you may not even be able to approximate in real life applications.

WHAT AMPLIFICATION MEANS ?

Note that the figures used in our data for amplification ratio for Air Amplifiers is the nearest realistic estimate between 60 psig (4.2 bar) and 120 psig (8.4 bar). Amplification ratio will depend on volume, pressure, atmospheric conditions and geometric design of the product itself. It can actually be a bit “higher” at lower pressures but we utilize the figures between 60 psig (4.2 bar) and 120 psig (8.4 bar) as this is the usability range for most applications. Annular Air Amplifiers peak out at about an air amplification ratio of 16 at an inlet pressure of 100 psig (7.0 bar) to 120 psig (8.4 bar). This is at the outlet before downstream entrainment. At lower pressures 20psig (1.4 bar) to 30 psig (2.1 bar) amplification ratios can reach as much as 20. Be wary of extremely high air amplification ratio claims. Downstream entrainment can be estimated at 3 times the amplified air at the outlet at a distance of 6” to 12” depending on the size of the amplifier. Downstream amplification will depend on “actual” velocity at that point as well as the dimensions of the amplifier itself. So when you see figures that do not seem logical, by all means ask for an explanation. For Air Blade™ Air Knives, the efficiency for amplification will be less than it would be for a mid-size “annular” Air Amplifier. The general estimate for air amplification is 9 to 10 times in the industry for the standard version, before downstream entrainment. It is about 13 times for the X-stream™ design versions because of the secondary surface for entrainment (30% boost is estimated). This again is based on the geometry of the Air Knives themselves and by interpolation using measurable force figures and air consumption figures. It is difficult to get an accurate measurement of velocity of an air knife without this downstream entrainment because of its geometry as compared to the annular shaped air amplifiers. For Air Knives with two exit slots, again, be wary of high amplification ratio claims.

At 6” from the exit of an Air Knife, convention estimates that the amplification ratio will go up by a factor of 3 which represents an amplification ratio of approximately 30 for a Standard Air Blade™ Air knife and 40 for an X-stream™ version. Again, these are estimates and can vary with both compressed air and atmospheric air conditions. Some firms have used an amplification ratio of 25 times which is just as reasonable an estimate. For products essentially the same dimensionally, great variations should not occur. At a distance greater than 6”, the amplification ratio will go up but not linearly because the velocity slows down with further air entrainment. So at 12” the air amplification does not suddenly double and in fact will go up maybe another 30% and decrease further after that. Remember these are estimates. Estimates provided by Nex Flow™ are realistic estimates.

DUCTING AMPLIFIERS

Air Knives are not normally ducted. However air amplifiers can be ducted to convey fumes, gases & light materials. Because Air Amplifiers are highly subject to back pressure, the “amplification ratio” will go down dramatically if an Air Amplifier is ducted. Nex Flow™ technical support can advise on the actual amplified flows for any specific application you may have for “ducted” Air Amplifiers if this is required for any specified projects.

HOW TO COMPARE PRODUCTS

Nex Flow™ strives to maintain verifiability in technical data provided and not “stretch” data to an unrealistic degree. Data provided is obtained by direct measurement and / or reasonable interpolations. All charts and graphs provided are “best fit” information made from actual data & interpolations usable for engineering purposes. This information is usable and accurate within reasonable variation from any normal errors from any measurement. If you suspect a competitive claim as unrealistic, we can provide a realistic explanation and even provide a comparable product on loan to do a “comparative” performance test. The easiest comparison is to set the two similar products at the same pressure, and measure the force utilizing a sensitive scale. Realistically, if they are similar in design they will perform almost the same. Claims of small changes in things like shims rarely have any major effect on amplification ratios and performance when compared on exactly the same basis. If velocity is important velocity meters are also readily available for a relatively qualitative measurement. Be wary of extremely high velocity claims.

WHAT YOU WANT

The most important thing is that the product does the job it was purchased for and that it provides the performance and savings you want. For this, both accuracy and the knowledge of the provider are of utmost importance. It is clear that Nex Flow™ Air Products Corp. has the experience to provide the technical support required for this unique and important technology. For this reason, so few returns of our products occur. We do not just send something to “try” wasting valuable time. We want both us and the customer to have utmost confidence in our products.

AMPLIFICATION PRODUCTS

The products that can be classified as Air Amplifiers are as per the following sections:

Section B :- Air Blade™ Air Knives- linear amplification to replace rows of nozzles, slots and drilled pipe.

Section C :- Ring Blade™ Air Wipes- split amplifiers for use in extrusion processes.

Section D :- Air Amplifiers- the traditional annular amplification products which are the most efficient for many blow off and cooling applications as well as for venting and conveying of light materials.

Section E :- Air Nozzles and Jets- smaller amplifiers, and although not as efficient as larger amplifiers, they do save on air, improve safety and reduce noise levels, and because of the laminar flow produced, have a greater effective distance for blow off.

Section F :- Air Guns utilize mainly the air nozzles and jets for effective energy and noise reduction as well as for safety.

VORTEX TUBE EXPLAINED AND PERFORMANCE MEASUREMENT

THE HONEST APPROACH TO VORTEX TUBE PERFORMANCE

The industry providing Vortex Tube cooling technology, as with air amplification consists of few producers of any consequence and many small firms producing often poor quality or cheap knock-offs with little in-house technical support or knowledge. The technology involved in making a Vortex Tube is more complex than amplification and tight tolerances must be maintained for a consistent, and quality product.

Technical support is critical in the use of Vortex Tubes and Vortex Tube products to avoid misapplication and to get maximum benefit from this unique technology. Nex Flow™ Air Products Corp. attempts to provide the necessary education, support and “verifiable” data the customer needs. Always be wary of data provided when it seems unreasonable (and unverifiable), and especially when you see the data just copied from one source to the next with no explanation of what it means when they may not even have produced any in house tests.

WHAT IS A VORTEX TUBE ?

The Vortex Tube is also known as the Ranque - Hilsch Vortex Tube and is a mechanical device that separates compressed air (or any inert gas) into hot and cold streams. The Vortex Tube was invented in 1933 by French physicist Georges J. Ranque. Physicist Rudolf Hilsch improved the design and published a widely read paper in 1947 on the device, which he called a Wirbelrohr (the literal translation means whirl pipe).

A Vortex Tube has no moving parts. Compressed air is injected tangentially into a “generator” which causes the air to rotate at a high speed. It rotates to the opposite end of the Vortex “Tube”. By using a conical “plug” at this opposite end, the outer shell of the compressed air escapes. The remainder of the air is forced to return in an inner vortex of reduced diameter within the outer vortex back through the center hole of the “generator”.

There are different explanations for the effect and there is debate on which explanation is best or correct. What is usually agreed upon is that the air in the tube experiences mostly "solid body rotation", which simply means the rotation rate of the inner gas is the same as that of the outer gas. In other words - they have the same angular velocity. This is different from what most consider standard vortex behavior where inner gas spins at a higher rate than outer fluid. The (mostly) solid body rotation is probably due to the long time in which each parcel of air remains in the vortex allowing friction between the inner parcels and outer parcels to have an effect.

One simple explanation is that the outer air is under higher pressure than the inner air (because of centrifugal force). Therefore the temperature of the outer air is higher than that of the inner air.

Another explanation is that as both inner and outer vortices rotate at the same angular velocity and direction, the inner vortex loses angular momentum. The decrease of angular momentum is transferred to the outer vortex in the form of kinetic energy, resulting in separated flows of hot and cold air. This is analogous to the Peltier effect which uses electrical pressure (in this case voltage) to move heat to one side of a dissimilar metal junction, causing the other side to grow cold.

ACTUAL VORTEX TUBE PERFORMANCE

There have been many advertisements by Vortex Tube manufacturers who claim ever lower temperature outputs from year to year with virtually no technical change. It is appropriate to explain what you can actually get in performance. The most commonly used chart for Vortex Tube performance is shown on the next page.

Approximate temperature drops (and rises) from inlet air temperature produced by a Vortex Tube set at various cold fractions. Assume constant inlet pressure and temperature.

Pressure Supply	Cold Fraction %						
PSIG (BAR)	20	30	40	50	60	70	80
20 (1.4)	62 (34)	60 (33)	56 (31)	51 (28)	44 (24)	36 (20)	28 (16)
	15 (8)	25 (14)	36 (20)	50 (28)	64 (26)	83 (46)	107 (59)
40 (2.8)	88 (48)	85 (46)	80 (42)	73 (39)	63 (34)	52 (28)	38 (20)
	21 (11)	35 (18)	52 (28)	71 (38)	92 (50)	117 (62)	147 (80)
60 (4.1)	104 (57)	100 (55)	93 (51)	84 (46)	73 (40)	60 (33)	46 (25)
	24 (14)	40 (22)	59 (33)	80 (44)	104 (57)	132 (73)	166 (92)
80 (5.5)	115 (63)	110 (62)	102 (56)	92 (51)	80 (45)	66 (36)	50 (28)
	25 (14)	43 (24)	63 (35)	92 (51)	113 (63)	143 (80)	180 (100)
100 (6.9)	123 (68)	118 (65)	110 (61)	86 (47)	86 (48)	71 (39)	54 (30)
	26 (14)	45 (25)	67 (37)	100 (55)	119 (66)	151 (84)	191 (106)
120 (8.4)	129 (72)	124 (69)	116 (64)	90 (50)	91 (50)	74 (41)	55 (31)
	26 (14)	46 (26)	69 (38)	104 (58)	123 (68)	156 (86)	195 (108)

The cold fraction is the “percentage flow” of the air coming out at the cold end. So a 60 percent cold fraction means 60% of the air comes out the cold end and 40% would go out the hot end.

The table above is actually quite accurate (but still “approximate”) for the medium sized vortex tubes operating with 10 to 15 SCFM flow design. The performance can deviate significantly for the higher flow designs. However, it is generally not important to get such “low” temperatures and in most applications the Vortex Tubes are “preset” to provide a specific temperature drop. But if very low temperatures are required, it is recommended to use the lower capacity (10 to 15) SCFM designs. The reasons for the deviation from the chart in the larger capacities are primarily one of physical design, but are generally not important in most applications. The table is applicable ONLY to Nex Flow™ Vortex Tubes with “H” generators. Vortex Tubes with “C” generators produce very cold temperatures as the generator design is different and high cold outlet flows are restricted, allowing for very cold temperatures to be produced but with low cold end flow. The “C” generators are for producing cold temperatures and not for high BTU/hr. (or watt) cooling effect. The sections following will focus on vortex tubes with the “H” generators only.

The cold end output temperature depends on the temperature of the incoming compressed air temperature. For example, if the compressed air source is 10° F (-12.2°C), at a pressure of 100 PSIG (6.9 bar), then almost any supplier of Vortex Tubes can claim to be able to achieve a temperature of -100° F (-73.7°C) with a cold fraction setting of 40%. “Cooling effect” is governed by both temperature drop created in the Vortex Tube AND the actual flow exiting the cold end. Colder temperatures produced do NOT always mean the highest cooling effect is produced. In a Vortex Tube, cold end air flow and temperature drop vary inversely with each other as the “cold fraction” changes. The cooling effect is a balance and combination of both temperature drop and outlet flow.

Referring to the cold fraction chart, the “cold” temperature drop listed is actually the cold temperature drop “inside” the Vortex Tube. Once the cold air leaves the Vortex Tube it is subject to mixing with the (normally warmer) ambient air. If the cold air is piped from the Vortex Tube through a hose or pipe, the temperature will also rise due to conduction. If you measure (or estimate from the chart) an “inside temperature of 32° F (0°C), you may actually only get 40° F (4.4°C), at the point of use.

Most Vortex Tube designs, even if they look significantly different from the outside, are actually quite similar inside. Nex Flow™ prides itself on quality workmanship and proprietary production standards to be consistent in performance and have high performance compared to competitive products. Even if we manage to get an extra one (1) degree drop at a given cold fraction, it translates into energy savings over the long term. This is achieved using metal generators that are consistent in dimension and not molded plastic which can change as the mold wears. Other proprietary machining techniques employed by Nex Flow™ create a consistent, high quality & superior performing product.

THE BEST TEMPERATURE SETTING FOR VORTEX TUBES

There is a misconception that the colder the temperature the better the Vortex Tube in a cooling application. Except where the cold temperature is of importance (such as in cooling an environmental chamber) it is best to have the temperature drop set to between a 60 percent to 80 percent cold fraction. If the output temperature is too low, you can actually get “ice” forming because of the condensation from the air inside the Vortex Tube falling below the dew point of the compressed air. This causes the Vortex Tube to stop working.

Too cold a temperature can be a problem if the dew point is reached. In addition, since temperature drop and flow out the cold end are interdependent and vary inversely with each other, should the temperature drop be too great, you get less flow and can actually achieve “less” cooling effect. The optimum setting for cooling is therefore between a 60% and 80% cold fraction. If the temperature of the incoming compressed air is hot, it is better to use a 60% cold fraction. If the incoming temperature of the compressed air is around standard conditions or cool, it is better to use a cold fraction of 80%. Normal setting for a cold fraction to address the vast majority of applications is approximately a 70%.

HOW TO COMPARE PRODUCTS

Nex Flow™ strives to maintain verifiability in technical data provided and not “stretch” data to an unrealistic degree. Data provided are “best fit” information made from actual data and usable for engineering purposes. This information is usable and accurate within reasonable variation from any normal errors from any measurement. If you suspect a competitive claim as unrealistic, we can provide a realistic explanation and even provide a comparable product on loan to do a “comparative” performance test. Materials of manufacture are also important in assessing value. Nex Flow™ Air Products Corp. manufactures all Vortex Tubes and Vortex Tube packages (panel coolers, tool coolers, spot coolers, etc.) in stainless steel. The important internal generators and other parts are metal (brass, stainless or other metals). All the seals and O-rings are made from quality viton. Special materials such as silicone are also available on request.

WHAT YOU WANT

The most important thing is that the product does the job it was purchased for and that it provides the expected performance and savings. For this, both accuracy and the knowledge of the provider are of utmost importance. It is clear that Nex Flow™ Air Products Corp. has the experience to provide the technical support required for this unique and important technology. For this reason, so few returns are made. We do not just send something to “try” wasting valuable time. We want both us and the customer to have utmost confidence in our products and technical support. All of our agents worldwide are trained to provide consistent and honest guidance.

VORTEX TUBE PRODUCTS

The products that can be classified as vortex tube products are as per the following sections:

Section J :- Vortex Tubes and Adjustable Spot Coolers Small and Medium Sized Vortex Tubes also provided in packages as an Adjustable Spot Cooler and as a Mini Cooler.

Section K :- Tool Coolers for cooling cutting tools, grinding wheels and for other dry machining and even non-machining applications where spot cooling can improve the product or output speed.

Section L :- Panel Coolers for control panels. Maintenance free and reliable - even in difficult environments. Versions for NEMA Type 12 (IP-52), NEMA Type 3R (IP-14) and NEMA Type 4-4x (IP-56) applications.

Vegetable Blowoff

Air Blade Ionizer in packaging

Muffin Sugar Blowoff

**Adjustable Air Amplifier
Removes
Dust In Grinding Application**

Cleaning Conveyor

Tool Cooler on lathe

**Air Blade Ionizer for
Thermoforming**

**Blow-Off For Extruded
Automotive Trim**

**Cooling Injection Molded
Plumbing Parts**
