SILENT X-STREAM[®] AIR BLADE[®] IONIZER

Powerful and quiet static eliminator rapidly dissipates static charge and removes dust.

The Silent X-Stream[®] Air-Blade[®] Air Knife utilizes the quality High Voltage static bars - the RN bar for most applications or the extra strong VS bars (Triple X versions) for very high static charges and extremely high speeds. The Silent X-Stream[®] Air-Blade[®] Air Knife uses a small amount of compressed air for a powerful, and adjustable force with "laminar" flow to eliminate charges in applications where static bars cannot reach or where high speeds are a factor, and to clean the surface.

Normally the Standard Model RN High Voltage brand static bar can address most applications. For extremely high speeds and high charges the extra powerful VS model is used. For wash down applications (such as pharmaceutical areas), a washable model is available at extra cost. (Contact factory for information)

All High Voltage static bars come with a patented safety connector and fully shielded cable. The power supplies are "repairable" and are so well made, that we offer a two year warranty on them (one year on the bars).

SILENT X-STREAM[®] AIR-BLADE[®] IONIZER FEATURES:

- Connections on the back or ends It flows from end to end (full flow).
- Stainless steel models are available for high temperature and corrosive environments.
- Models are designed for easy cleaning and prevention of dirt entering the static bar, minimizing potential damage.
- Patented connectors with the ground intrinsic to the cable design.
- Instant ON/OFF with no moving parts.
- Repairable Power Supply with a two year warranty.

SILENT X-STREAM[®] AIR-BLADE[®] IONIZER BENEFITS:

- Flexible mounting options.
- Units can be mounted end to end for longer lengths withno air gap.
- High temperature, extra strength, and even a uniquewashable stainless steel model is available for special applications or as required.
- Ease of cleaning and maintenance.
- No separate ground connection that can be cut and cause sparks or accidentally shock personnel
- Conserves air use when not required.
- Eliminates one costly area which is power supply replacement. 2 year warranty on power supplies.

STATIC ELIMINATORS

NEX FLOW®

PERFORMANCE AND RELIABILITY

The standard RN static bar is very effective when mounted close to a surface (within an inch) at speeds up to 800 feet per minute and the strong VS bar can work to speeds up to 2000 feet per minute mounted as close or at slower speeds up to 8 inches away. For greater distances and high speeds the addition of air is required. The laminar flow from an Air Blade® Air Knife will extend the effectiveness over this extra distance. Even with laminar flow the ions will recombine and slow static dissipation slightly. For very highly charged surfaces and very high speeds, the extra strong VS static bar may be required. Apart from distance, the Air Blade® Air Knife allows enough force for blow-off of dust and dirt with little required. Blowers can actually be more effective in static removal closer to the surface but the Air Blade® lonizer is more effective when further away (see chart comparing blowers and Air Blade® lonizers above). This is why we recommend stronger static bars like our VS static bar for blowers when far from the target. Blowers however do not offer adequate blow-off force to clean unless they have very high flow and high static pressure. But when not close to the target, blower systems will still require a stronger static bar to match the rate of dissipation that an Air Blade® lonizer can offer. The X- Stream® Air Blade® lonizer can work well for dust and dirt blow-off within the range of 20 to 40 PSIG (1.4 to 2.8 Bar) line pressure.

Three 24" X-Stream®Air Blade® lonizers Blow off dust from Automotive Bumpers prior to painting. The NEX FLOW® PLCFC controls the air on and off as required minimizing air consumption. In this case the static bars were "daisy-chained" together minimizing extraneous cable and reducing the number of power supplies needed.

A Model 16118X removes static from extruded rubber web on a rewind. Previously the static charge was so high that any spark would cause the rubber to burn which regularly happens the 'extra strong' VS Bar combined with the X-stream[®]Air Blade[®] eliminated this unsafe situation.
